

SREEDATH SOMISETTY

Senior Java Full Stack Developer

Phone no: +1 (614) 653-7677

Email: Sreedathsetty91@gmail.com

PROFESSIONAL SUMMARY

- Around 10 years of experience in all aspects of **Software Development Life Cycle (SDLC)** including Requirement, Analysis, Design, Implementation, and Testing in both Web-based and Enterprise applications using Java technology experience in developing complex UIs using **React**.
- Experience in application development using XP Methodology, which includes **Agile, TDD (test-driven development), and Waterfall models**.
- Expertise in some of the best modern front-end frameworks such as **ReactJS, Angular, Bootstrap, Typescript, HTML5, CSS3, MongoDB, jQuery, JavaScript, and Node JS**.
- Very experienced in checking Cross Browser Compatibility of different elements on different browsers like Internet Explorer, Google Chrome, Firefox, and Safari.
- Extensive experience in Coding and maintenance of J2EE-based applications using Java 8 version, Java 11 Collections, Data Structures, Multithreading, JDBC, and Servlets.
- Extensive knowledge of **Data Structures** and OOPS concepts like **Inheritance, Abstraction, Polymorphism, and Encapsulation**.
- Hands-on Experience in developing web applications using Spring framework modules like **Spring MVC, Spring IOC, Spring AOP, Spring JDBC, Spring Boot, and Spring Security**.
- Experience with **ORM tools** like **Hibernate** involving **Transaction management, HQL, Mappings, and Connection Pooling**.
- Working Experience in Messaging Platforms such as **Rabbit MQ, Kafka, AWS SQS**.
- Experienced in messaging modules by using **RabbitMQ, and Kafka**.
- Proficient knowledge and working experience of various J2EE design patterns like **MVC, Session, Data Access Object (DAO), Factory, Singleton, and Front Controller**.
- Good experience working with Amazon Web Services like **EC2, S3, Amazon RDS, Load Balancing, Amazon SQS, Amazon EBS, and Amazon CloudFront**.
- Developed **asynchronous processing** using Spring Boot's integration with **@Async** and message brokers like RabbitMQ and Kafka.
- Expert in implementing Service Oriented Architecture using **SOAP** and **Restful Web Services**.
- Working Knowledge of designing test protocols for locating issues in the system and addressing issues with system stability and quality of data.
- Developed Web API using **Node JS** and hosted on multiple load-balanced API instances. Implemented application testability, diagnostics, and fixing bugs with the help of **REDUX (Reducers) architecture**.
- Experienced in writing **SQL scripts** in **Oracle, MySQL**, and a good understanding of NoSQL Databases like **MongoDB**.
- Expert in using **JIRA** for bug tracking. Have used **Git** as a version control tool and **Jenkins** for continuous integration of builds.
- Built CI/CD pipelines using **Docker, Kubernetes**, and custom scripts – helping teams deploy many times in a day.
- Healthy Experience with **JUnit, Mockito, MongoDB, and Log4j** in developing test cases and determining application functionality.
- Experience with Java technologies like **JSP, JDBC, JMS, and Servlets**.
- Excellent interpersonal abilities, communication skills, time management, and teamwork skills to meet project deadlines.
- Integrated **Docker** with **CI/CD pipelines** using **Jenkins, GitLab CI, and AWS CodePipeline**, automating the build, testing, and deployment of containerized applications for faster release cycles.
- Managed **Docker registries** such as **Docker Hub** and **AWS ECR** for storing and versioning container images, ensuring a smooth process for pulling images during deployment.

TECHNICAL SKILLS

Languages	Java 8, Java 11, Java17, JavaScript, C, PL/SQL, Python, SQL, C++
-----------	--

Java/J2EE Technologies	Java, Java Multithreading, Generics and Collections, EJB, Tiles
Web Technologies	HTML5, XML, DOM, CSS3, JavaScript, AngularJS, XPath, AJAX, jQuery, ReactJS, Redux, Bootstrap, REST, SOAP, Microservices MongoDB, JSP, Servlets, JNDI, JDBC, JSTL, Mustache, JMS, Web Services, REST, SOAP, WSDL, HTML, DHTML, Scala, Java 8, Java 11, Beans, JavaScript, AJAX, jQuery, React, AngularJS, Bootstrap, Azure
Methodologies	UML, Agile, Waterfall, TDD (Test-Driven-Development), BDD (Behavior Driven Development)
Frameworks	Struts, Spring (Spring Boot, Dependency Injection, Spring MVC, Play, Spring IOC, Spring JDBC, Spring with Hibernate), Hibernate, Log4j.
Containerization and Deployment	Docker, Kubernetes.
CI/CD Pipelines	Maven, Gradle, Sonar, Jenkins, AWS SPRING BOOT, AWS LAMBDA.
Design & GUI Tools	Eclipse, NetBeans, IntelliJ
App servers	IBM WebSphere, Apache Tomcat, BEA Web Logic, JBoss
Spring Tools	Spring MVC, IOC, AOP, JDBC, JTA, IO, Spring Boot, Spring Micro services, Spring REST, Spring Eureka, Spring Cloud, Swagger UI.
Databases/Tools	Oracle 8 / +9i/ 10g, My-SQL, PL/SQL Developer, DB2, Redis, MS SQL Server 7.0
Design/Version Control	Git
Testing technologies/ tools	JUnit, JMeter, Mockito
Operating Systems	Windows, Linux UNIX
IDEs	Eclipse, NetBeans, IntelliJ

PROFESSIONAL EXPERIENCE

Client: Barclays, Whippany, NJ

August 2023 – Present

Role: Senior Java Full-Stack Developer

Responsibilities:

- ✦ Analyzed business requirements, and participated in technical design, development, and testing of various modules assigned.
- ✦ Used Java 17 Records for immutable DTOs, reducing boilerplate and improving serialization in microservices.
- ✦ Responsible for Architecting, developing, and testing frontend applications built with React.
- ✦ Implemented **REST** Microservices using spring boot and **JUnit** for unit testing.
- ✦ Refactored business logic using Java 17's Enhanced Switch Expressions for better maintainability and fewer logic errors.
- ✦ Used the new String methods introduced in Java 17, like is Blank (), lines (), and strip (), to streamline text processing.
- ✦ Successfully migrated legacy Java applications from Java 8/11 to Java 17, ensuring compatibility and taking advantage of new language features and performance improvements.
- ✦ Implemented Sealed Classes to enforce controlled inheritance, enhancing security and maintainability in domain-driven microservices.
- ✦ Used **Spring MVC** Framework to create REST endpoints and maven for project building.
- ✦ Experience with Hibernate configuration and mappings of XML files for database access.
- ✦ Involved in Agile process, Microservices, Sprint meetings, attended daily standup meetings (Scrum), and estimation meetings.
- ✦ Developed the single page application (SPA) using **ReactJS** which utilizes the classes, and modules from **JavaScript ES6**.
- ✦ Involved in Architecting and developing complex UI components using **ReactJS** Microservices
- ✦ Expertise in creating Custom Reusable React Components Library Experienced in working with Redux architecture using complex Object-Oriented concepts in improving the performance of the websites.
- ✦ Experience with Design, code, and debug operations, reporting, data analysis and web applications utilizing **Python**.
- ✦ Experience in developing React applications using Redux and React Hooks.
- ✦ Implemented JavaScript unit test cases using **Jest** and **Enzyme**

- Worked with **MS SQL** queries to save the data and retrieve the data from the database using the spring mongo data repository.
- Used **Jenkins** to automate the build and deployment process.
- Creation, enhancement, and maintenance of **PostgreSQL** database functions, including reflection of CRUD operations for the object model PostgreSQL.
- Using **AWS SPRING BOOT**, **AWS LAMBDA** Microservices, and **MongoDB** services to build scalable Java applications around various technologies like Amazon **S3**, Amazon **EC2**, **ECS**, **EKS**, and more.
- Reworked applications to meet changing market trends.
- Analyzed previous application instances and reduced the overall pricing cost using load metrics.
- Implement native method calls from Java 11 to C/C++ and converted C/C++ code to Java 11 for socket implementation of TCP/UDP/SIP messages across each gateway platform.
- Experience in setting up Baselines, Branching, Patches, Merging and Automation Processes using Shell/**Bash** and Batch Scripts
- Reviewed and debugged errors to improve overall performance.
- Involved in developing multithreaded modules and Java 11 applications by using core Java 11 concepts like **Multithreading** programming, **Exception Handling**, and **Collections**.
- Shell scripts for **Bash** shell to automate deployments and environment configuration.
- Developed various helper classes needed following Core Java **multi-threaded programming** and **Collection** classes.
- Used AWS SPRING BOOT, AWS LAMBDA, and **MongoDB** to build Java 11 applications that work with Amazon **S3**, Amazon **EC2**, **ECS**, **Dynamo DB**, and more.
- Using **CloudFormation** to write IaC (Infrastructure as Code) to help with provisioning the resources.
- Designed highly scalable and testable code.
- Used **Spring framework**, **Spring Boot**, **Java 8 Spring Cloud**, and **Spring Data**, to develop applications.
- Implemented **Spring MVC** framework to handle application logic and makes calls to business objects.
- Securing the API by implementing OAuth2 token-based authentication/authorization scheme using **Spring Security**.
- Integrated **Kafka producers and consumers** to enable seamless data flow between services, ensuring reliable message delivery and event-driven processing.
- Helped migrate and manage multiple applications from on-premise to cloud using AWS services like **S3**, **Glacier**, **EC2**, **ECS**, **RDS**, **SQS**, **SNS**, **CloudWatch's**, **Cloud Formation**, **VPC**, etc.
- Involving in code quality testing by adding **Junit/Jupiter**, **Mockito**, and integration test cases to existing framework components.
- Designed and optimized **asynchronous operations** using **Promises**, **Async/Await**, and **Event Loop** in Node.js.
- Scaled Microservices, distributed systems and serverless applications using **Simple Queue Service (SQS)**.
- Installed, monitored, and maintained the development infrastructure using CloudFormation.
- Maintaining the code documentation and tracking the issues till completion using Confluence and JIRA. Worked with GIT version control, **GitHub** as the central repository, and JIRA for bug tracking and ticketing.

Environment: Java 11, Java17 to OpenJDK15, Spring Boot, REST, Hibernate, JDBI, Bash, SQL Server, Oracle, Redis, AngularJS, Mustache, Scala, ActiveMQ, Docker, AWS, Kubernetes, Jenkins, SonarQube, Agile, GIT, IntelliJ, Python, Kanban, Bootstrap, Ubuntu.

Client: Hub Parking Technology, Warrendale, PA

April 2021 – July 2023

Role: Senior Java Full-Stack Developer

Responsibilities:

-
- Utilize **Agile Methodologies** to manage the full life-cycle development of the project.
 - Extensively use **React-Router techniques Axios service** to retrieve data from server Synchronously.
 - Involved in implementing various screens for the front end using React.js and used various predefined components from **NPM (Node Package Manager)** and **redux library**.
 - Working with **React** to build **Bootstrap components** for responsive UI objects and linked with API data to view and render the **virtual DOM** dynamically.
 - Experience in React for creating interactive UI using **One-way data flow**, **Virtual DOM**, **JSX**, and **React Native concepts**.

- ⤴ Developing UI/UX design at the front end powered by **React JS platform**.
- ⤴ Working on implementing **service-side validations, handling actions, events, and Encapsulation** by implementing **ReactJS**.
- ⤴ Working with the **Flux and Redux workflows** powered by the **ReactJS library**.
- ⤴ Developed additional inhouse tools like is Alive, log Analyzer that would ease finding root cause for failure of reports. is Alive tool gets the liveness(similar to Zookeeper heartbeat mechanism) info of the nodes on the commerce, log Analyzer will collect logs from each node and consolidate on the COMM serve(similar to Logstash).
- ⤴ Proficient in Apache Flink, leveraging its real-time data processing capabilities to optimize data pipelines and enhance streaming analytics in previous roles, contributing to improved data-driven decision-making.
- ⤴ Utilize **React** for its efficient data flow architecture to create lightweight and render efficient web apps.
- ⤴ Developed scripts using **BASH** and **BATCH** files for Automation of Activities and builds.
- ⤴ Responsible for implementing Stable **React Components** and **standalone functions** to be added to any future pages.
- ⤴ Monitored resources and applications using AWS **CloudWatch** including creating alarms to monitor metrics such as **EBS, EC2, ELB, RDS, S3** and configured notifications for the alarms generated.
- ⤴ Using of **React-Router** to turn the application into **Single Page Application**.
- ⤴ Adding new interfaces and features through **ReactJS**-powered front-end development.
- ⤴ Creating **AWS SPRING BOOT, AWS LAMBDA Multi-Factor Authentication (MFA)** for instance RDP/SSH login, and working with teams to lock down security groups.
- ⤴ Implement **Microservices** that contain the shared functionality that all business units inside the application may perform the same.
- ⤴ Implemented **JWT-based authentication** and authorization using **Express middleware** for secure user access.
- ⤴ To write different stored procedures and did fine-tune slow-performing **SQL**.
- ⤴ Maintaining and monitoring the development infrastructure using **JIRA**.
- ⤴ Good Knowledge of **Python** and Web Framework **Django**.
- ⤴ Experience in writing **JUnit test cases** and debugging the application using **Log4J**.
- ⤴ Merging the code and branch implementations and maintaining different file versions using **GIT**.
- ⤴ Experience in messaging queue services like **RabbitMQ, Java 11, Dynamo DB Kafka, and Microservices**.
- ⤴ Developed visual component libraries in C++ with optimized compilation done with C++ Borland compiler using register calling convention to optimize function calls in handling dynamic events.
- ⤴ Implement the Project structure based on the **Spring MVC** pattern using spring boot.
- ⤴ Involving in the development of different modules using **Spring boot framework, Restful Web Services, JPA, and** integrating the modules.
- ⤴ Experience developing the application using Spring Framework modules like Spring MVC, Spring IOC, Spring Security, **Spring AOP, MongoDB, and Spring Cloud**.
- ⤴ Configure **AWS SPRING BOOT, AWS LAMBDA IAM** roles, and Security Group in Public and Private Subnets in VPC. And create **EC2** instances by setting up a virtual private cloud (VPCs), and security groups.
- ⤴ **Monitored Docker containers** using **Docker stats** and integrated third-party tools like **Prometheus and Grafana** for real-time performance tracking and log aggregation of containerized applications.
- ⤴ Configured **Kafka security features** like SSL encryption, SASL authentication, and ACLs to secure data in transit and ensure proper access controls for producers and consumers.
- ⤴ To work with core AWS SPRING BOOT, AWS LAMBDA services such as Setting up a new server (EC2) instances/services in **AWS SPRING BOOT, AWS LAMBDA, MongoDB, Microservices**, configuring security groups, and setting up Elastic IPs, auto-scaling, and Cloud Formation.
- ⤴ Integrated **Node.js** backend with frontend frameworks like **Angular and React** for full-stack applications.
- ⤴ Working with **JIRA**, which is managing project requirements and tasks, and **GitHub** for Version Control.
- ⤴ Developing **API** for using **AWS SPRING BOOT, and AWS Lambda** to manage the servers and run the code in AWS SPRING BOOT, and AWS LAMBDA.
- ⤴ Writing service methods and **SQL queries, PL/SQL** to interact with the **Oracle DBMS**, and writing test cases using JUnit Frames.
- ⤴ Create the continuous delivery pipelines for deploying Microservices using Jenkins.

Environment: Agile, Java 1.8, J2EE, EJB, HTML5, Bash, CSS3, jQuery, Microservices, Python, JavaScript, React, Rest Web services, Oracle, Spring MVC, MongoDB, Spring IOC, Spring Security, AWS SPRING BOOT, Spring AOP, Hibernate, JIRA, Jenkins, Log4J, GIT, Apache Flink, Dynamo DB, Java 11 Junit.

Client: Baylor Scott & White Health, Dallas, TX

Jan 2019 – March 2021

Role: Java Full-Stack Developer

Responsibilities:

- Involved in all the phases of the SDLC - analysis, design, development, testing, and deployment.
- Developed User Interface using **HTML5, CSS3, JavaScript, Bootstrap, and ReactJS**.
- Create Single Page Applications (SPA) that load a single HTML page using **React.js, Node JS, and RxJS** Observable to generate continuous and responsive Web apps, without page reloads, thus dynamically updating the page.
- Implemented UI framework and designed using **ReactJS**. Used flux with redux hooks.
- Responsible for **React UI** and architecture. Building components library, including **Tree, Slide-View, and Table Grid**.
- Extensively used ReactJS components, Forms, keys, and routers for developing Single page applications.
- Used **React Observables** to create the components for data manipulation.
- Created Widgets, Dashboards, Charts, login functionality implemented, and session handling base functionalities added.
- Used spring framework features like **Spring IOC, Spring AOP, Rest API, and Spring Batch**.
- Designed and deployed **XML files** for Dispatcher Servlets, Application Context, and Controllers to implement the Inversion of Control module in spring.
- Experienced in developing web-based applications using **Python, Django, QT, C++, XML, CSS, JSON, HTML, DHTML, JavaScript and jQuery**.
- Used **Amazon CloudWatch** to monitor AWS SPRING BOOT, AWS LAMBDA services, and **Amazon CloudWatch logs** to monitor applications.
- Developed **Java API** to interact with the **Amazon SQS** used in sending bulk emails.
- Integration of Amazon Web Services (AWS SPRING BOOT, AWS LAMBDA) with other applications infrastructure.
- Integrated **third-party APIs** and payment gateways into Node.js applications.
- Extensively used **DAO patterns**, including mapping **DAO objects**, and configuring files and classes to interact with databases.
- Developed web services using **JAX-WS** to interact with legacy applications (backend processes).
- Used **Apache SVN** for repository management and Ant for build management.
- Integrated Apache Flink as a core component of our data processing infrastructure, enabling efficient real-time data streaming and analytics.
- Developed microservices using Node.js and deployed them using Docker & Kubernetes.
- Implemented multiple high-performance MongoDB replica sets on EC2 with robust reliability.
- Used MongoDB for storing minimal data documents and used in file sharing.
- Monitored **Kafka** brokers and consumer performance using **Kafka Manager** and **Confluent Control Center**, ensuring that the backend message-driven architecture was functioning efficiently.
- Developed interactive web application using Node.js a pure JavaScript application framework.
- Used **Docker** to improve our (CD) Continuous Delivery framework to streamline releases.
- Used **JIRA** for defect management and to keep track of bugs and issues.
- Built an application using **MAVEN** and used **Log4J** to generate log files for the application.
- Extensively Implemented **Spring Boot, dependency Injection (DI)**, aspect-oriented programming (AOP) features, and hibernate.

Environment: Agile, J2EE, JAX-WS, HTML5, CSS3, jQuery, JavaScript, Python, Microservices, Bootstrap, NodeJS, JSON, XML, AWS SPRING BOOT, AWS LAMBDA EC2, S3, SQS, SQL, Apache Flink, Spring MVC, Spring IOC, Spring Batch, Spring AOP, Hibernate, JIRA, Log4J, Java 8, Java 11, GIT, Dynamo DB Maven, MongoDB, Mockito, Docker.

Client: T-Mobile, Herndon, VA
Role: Java Full-Stack Developer
Responsibilities:

Aug 2017 – Dec 2018

-
- ⬆ Analyzed and translated functional specifications and change requests into technical specifications.
 - ⬆ Designed, Developed, Deployed, tested, and migrated the scripts to QA, pre-prod, and production environments following **Scrum Agile methodology**.
 - ⬆ Worked on user stories planned during every sprint in **AGILE** methodology.
 - ⬆ Involved in developing orchestration services that call multiple backends using **RESTFUL** web services.
 - ⬆ Write **Rest API** for Web Service Operations using **Spring Boot**.
 - ⬆ Developed different **JavaBeans** and utility classes to support Server-Side programs.
 - ⬆ Experienced in the architecture, design, and development of applications built in Java/J2EE using MVC architecture integrating **Spring, Hibernate, and Struts frameworks**.
 - ⬆ Used Spring as an application framework to build the Services layer and implemented its core modules such as **Spring Core Container, Inversion of Control, Data Access, and MVC**.
 - ⬆ Implemented **ORM (Object Relational Mapping) framework** with Hibernate for mapping Java classes and database tables.
 - ⬆ Developed **Java classes** for implementation of persistence of objects and Caching of data using **Hibernate**.
 - ⬆ Developed code using various patterns like **Singleton, Front Controller, Value Objects, and Service Locator**.
 - ⬆ Used **Spring Framework** at the business tier and **Spring's Bean Factory** for initializing services.
 - ⬆ Extensively used Core Java such as **multi-threading, exceptions, and collections**.
 - ⬆ Developed test cases and performed unit testing using the **JUnit Test case**.
 - ⬆ Performed configuration, deployment, and support of cloud services using **AWS SPRING BOOT, and AWS LAMBDA**.
 - ⬆ Worked on cloud-specific AWS SPRING BOOT, and AWS LAMBDA technologies including Elastic Compute Cloud (EC2), Simple Storage Services (S3), and Amazon RDS.
 - ⬆ Involved in **Stored Procedures, User Defined Functions, and Views** implemented Error Handling in the **Stored Procedures** and **SQL objects**, and modified already existing **stored procedures, triggers, views, and indexes** depending on the requirement.

Environment: Java, Multithreading, Exception Handling, J2EE, Spring MVC, Spring AOP, Spring IOC, Struts, MongoDB, Hibernate, Junit, Dynamo DB, AWS SPRING BOOT, MongoDB AWS LAMBDA EC2, AWS SPRING BOOT, AWS LAMBDA S3, Microservices, AWS LAMBDA RDS.

Client: Commonwealth of Massachusetts (State of Massachusetts) – Boston, MA
Role: Java Developer
Responsibilities:

Aug 2015 – July 2017

-
- ⬆ Analyzed and translated functional specifications and change requests into technical specifications.
 - ⬆ Used **Java 1.8 Lambda** expressions and **Stream API** to support functional-style operations on streams of elements.
 - ⬆ Worked on Java functional programming concepts like **Streams, Functional Interfaces**, new date time API and **lambda expressions**.
 - ⬆ Worked on **Core Java** with **Concurrent API** is used extensively for **parallel processing** and chunk processing.
 - ⬆ **Apache camel Kafka** end point used to publish trade flow to Apache Kafka.
 - ⬆ Developed component send trade data to **Rest Endpoint** to capture enriched data. Response from Rest Endpoint publishes to MQ using Apache Camel.
 - ⬆ Used **Angular7/6router** and implemented module wide routing and created different forms using Angular7/6data driven and **template driven forms**.
 - ⬆ Utilized **IBM WebSphere** Application Server for deploying and managing enterprise-level Java applications.
 - ⬆ Developed **Angular7/6Components, Services, and Filters** and took part in developing unit test and integration test cases using **Jasmine, Karma**.

- ⤴ Integrate with a reliable **payment gateway** provider such as Stripe, PayPal, or Square. This involves setting up accounts, obtaining API keys, and implementing the necessary SDKs or APIs to facilitate transactions.
- ⤴ Integrated **IBM WebSphere** with other components of the technology stack, such as databases, messaging systems, and **security** solutions.
- ⤴ Consumed **REST** services using **Angular7/6HTTP** and performed various **REST HTTP** operations for data retrievals and updates.
- ⤴ Implemented **Cloud** capabilities like **Centralized Configuration, Load Balancing, and Service-to-Service** call using Feign, Service Registry and Discovery using Eureka in Spring Cloud.
- ⤴ Used **Spring Boot** which is radically faster in building cloud **Micro Services** and develop spring based application with very less configuration.
- ⤴ Implemented security measures within **IBM WebSphere**, including user **authentication, authorization, and SSL encryption**, to protect sensitive data and ensure compliance with security standards.
- ⤴ Developed **Micro services & APIs** using **Spring Cloud, Spring Security, Spring Boot, and Spring Integration**.
- ⤴ Spring **JDBC** used retrieve and update, inserting data in oracle database with use of stored procedures.
- ⤴ Ensuring that all communication between your application and the **payment gateway** is secure. Use HTTPS and TLS to **encrypt** data transmission, and follow best practices for handling sensitive information such as credit card details.
- ⤴ Implement logic to handle **payment transactions** within your application. This includes processing payments, authorizing transactions, capturing funds, handling refunds, and managing disputes or chargebacks.
- ⤴ Worked with **IBM support resources** and documentation to troubleshoot and resolve any issues or performance bottlenecks related to WebSphere configuration or deployment.
- ⤴ Apache Maven was employed as a build tool to construct the **Restful web-service**.

Environment: Java 1.8, concurrent package, lambda expressions, streams, J2ee, Web services, XML (Dom, Sax, Xpath, Stax, XSLT), IBM MQ, Kafka 2.0, Spring Boot, Payment Gateway, Apache Camel 2.2, Spring Batch, Spring Data JPA, Profiler, Eclipse, Jenkins, Confluence, Jira, Swagger, Maven, Windows, Linux, DB2, SQL Server.

Client: Citi Bank -Dallas, TX

Jan 2014 – July 2015

Role: Java Developer

Responsibilities:

-
- ⤴ Analyzed and translated functional specifications and change requests into technical specifications.
 - ⤴ Developed User Interface using **HTML5, CSS3, JavaScript, Bootstrap, and ReactJS**.
 - ⤴ Worked on user stories planned during every sprint in **AGILE** methodology.
 - ⤴ Write **Rest API** for Web Service Operations using **Spring Boot**.
 - ⤴ Developed test cases and performed unit testing using the **JUnit Test case**.
 - ⤴ Used **JIRA** for defect management and to keep track of bugs and issues.
 - ⤴ Performed configuration, deployment, and support of cloud services using **AWS SPRING BOOT, and AWS LAMBDA**.
 - ⤴ Worked on cloud-specific AWS SPRING BOOT, and AWS LAMBDA technologies including Elastic Compute Cloud (EC2), Simple Storage Services (S3), and Amazon RDS.
 - ⤴ Writing service methods and **SQL queries, PL/SQL** to interact with the **Oracle DBMS**, and writing test cases using JUnit Frames.
 - ⤴ Involved in **Stored Procedures, User Defined Functions, and Views** implemented Error Handling in the **Stored Procedures and SQL objects**, and modified already existing **stored procedures, triggers, views, and indexes** depending on the requirement.

Environment: HTML, CSS, JavaScript, Bootstrap, React JS, Agile, Spring Boot, Junit, AWS Spring boot, AWS Lambda, Ec2, AWS Simple Storage Services, Amazon RDS, SQL, PL/SQL, Oracle DBMS, Java Frames.

EDUCATION

- ⤴ Bachelor of Technology in Computer Science in Jawaharlal Nehru Technological University-Hyderabad.
