

Summary:

- Over 15 years of IT experience as a progressive and diverse Business Analyst in Healthcare, Pharma, Banking, and Insurance industries.
- Experienced in traditional PMLC, Software Development Life cycle(SDLC), Rational Unified Process (RUP), and Scrum and Agile software development methodologies. Executed latest projects using best practices of Scrum and Agile.
- Performed different types of Testing: Functional Testing, Regression Testing, Smoke Testing, Ad-hoc Testing, Content Testing and User Acceptance Testing.
- Worked on Test Complete, Selenium, QTP/UFT for Functional and Regression Testing.
- Good Experience in Automation of Testing including POC Testing, reviewing the Automation Test Strategy using Test Complete 12.2, 13, 14, UFT 12.5x/QTP 10.x/9.2 with knowledge of Selenium Suite (Selenium IDE & WebDriver).
- Expert in conducting Software Requirements Analysis, identifying Software Specifications, drawing Process Flow Diagrams, participating in Systems Design, and Software Testing and Project Life Cycle Initiatives.
- Experience in Business Process Modeling (BPM), Business Process Improvement (BPI), Business Process Automation, Continuous Quality Improvement (CQI), and Business Process Re-engineering (BPR)
- Proficient in conducting JAD and RAD sessions, User Interviews, and presentations to a varied audience.
- Experience developing and decomposing Epics , Features and User Stories.
- Working knowledge in creating test suites using Tosca and Testcomplete
- Extensive experience in creating Automation processes using AWS and Selenium.
- Experience in performing Impact Analysis, GAP Analysis, SWOT Analysis, Cost-Benefit Analysis and ROI Analysis.
- Experience in creating UML diagrams, Internal and External Workflows, Entity Relationships, Process Flow Diagrams, and Data Flow Diagrams and Use case Diagrams.
- Experience in creating user scenarios, user flow, low fidelity and high-fidelity wireframes.
- Experience in developing Requirement Specification document that incorporates scope, business workflow, functional requirements, data requirements, system requirements, and definitions.
- Experience with 837, 834 EDI files other EDI transaction standards.
- Experience in managing complex requirements and technologies in object-oriented development using Prototyping
- Proficient in using Rational Suite of products for Requirements Management, Business Modeling and Testing.
- Experience with Object-Oriented design skills and strong Knowledge of Service Oriented Architecture (SOA).
- Experience in resolving Business as well as technical issues and served as the liaison between non-Technical business groups and Technical Developers with appropriate communication and presentation skills
- Excellent Team player to work in conjunction with testers, developers and other team members in validation and testing complex scenarios and projects and in the maintenance of Quality Standards in Projects.
- Experience in Quality Review and Testing like Functional Testing plans, preparation and execution of Test Ideas list, Test cases and Test Scripts. Experience in Reviewing Compliance Policies & Procedures to meet industry/application standards

EDUCATION:

- **Masters of Science in Software Engineering, Stratford University, VA, USA**
- **Bachelors of Science in Computer Engineering, JNT University, AP, INDIA**

SKILL SET:

- Methodologies: Agile, RUP, Spiral, Waterfall
- Testing Tools: Rational Robot, Test Director, Quality center, Winrunner, Loadrunner, Tosca, Selenium, UFT
- Automation Tools: TestComplete, SELENIUM/ Web Driver/IDE, UiPath, Blue Prism RPA, Tosca
- Requirement Mgmt Tools: Rational RequisitePro, Caliber RM, Rational DOORS,
- Business Modeling Tools: Rational Rose, Microsoft Visio, BlueWorks live
- ERP/BI/ETL: SAP, Informatica, SSIS, Oracle, Business Objects, Data Mapping and Data Warehousing, Azure Devops
- Database Packages: Oracle, SQL Server, MS Access, Postgres SQL
- MS Office: Word, Excel, Visio, Power Point, MS Project, Access, Power BI
- Data Analysis : Tableau, Power BI, Python
- Tracking and Management tools: qTest, Jira, OpenText Quality center, SharePoint, Confluence, ServiceNow.

Certifications

- Certified Scrum Master (CSM)

EXPERIENCE:

Spatial Front Incorporated

Jan 25 – Mar 25

Help Desk Task Manager

- Managed the ticketing system, ensuring timely triage, categorization, and resolution of technical issues while tracking escalations to higher-level support teams.
- Assigned and prioritized tasks among help desk technicians based on urgency and impact to optimize workflow efficiency.
- Monitored help desk performance metrics, generating reports for leadership to drive continuous improvement.
- Led the Help Desk team to ensure customer service expectations were consistently met by overseeing daily operations and enforcing best practices.
- Served as the escalation point for unresolved or high-priority customer issues, ensuring prompt and effective resolution.
- Facilitated communication on critical incidents, software releases, and change requests with the Infrastructure & Operations (I&O) team and application development teams.
- Analyzed recurring incidents to identify trends and recommend long-term solutions to reduce future disruptions.
- Provided on-call support for operational issues outside standard business hours, ensuring rapid response and resolution.
- Communicated with end-users regarding issue status, resolutions, and expectations to enhance customer satisfaction.
- Developed and enforced help desk policies, procedures, and best practices to standardize support operations and improve service quality.

Amazon

Mar 22 – Aug 24

Sr. Business Analyst/Scrum Master

- Created and maintained project artifacts, including project plans, BRDs, SOWs, budgets, schedules, and risk and resource documents in an Agile environment.
- Successfully implemented a Regression Automation suite leveraging Tosca for applications like TRIRIGA and Blackline.
- Managed IT infrastructure upgrades, hardware deployments, software rollouts, IT migrations, and technical refresh initiatives.

- Oversaw migration, colocation, public cloud, end-of-life, service, software development, and infrastructure projects, providing technical and administrative support to meet program requirements.
- Managed a diverse technical team of engineers, developers, network administrators, system administrators, business analysts, account managers, and QA testers.
- Facilitated requirements gathering and UAT/change management during the deployment phase by collaborating with business owners and subject matter experts.
- Effectively communicated project progress, issues, risks, budget, cost, timeline, and mitigation to project sponsors, stakeholders, and project teams.
- Functioned as a business strategist, evaluating project requests in alignment with the strategic direction of the business and identifying opportunities to leverage existing technologies and applications for process improvements.
- Demonstrated ability to work at a fast pace, manage conflicting deadlines, and prioritize project strategy and deliverables.
- Managed and defended project aspects such as cost, budget, timeline, scope, performance, and schedule throughout the delivery of initiatives, products, systems, and programs.
- Extensive experience writing documents and project deliverables such as Functional Requirements Specifications, Business Requirements Document and Requirements Traceability Matrix.
- Led process improvement initiatives and collaborated effectively with technology, application, compliance, and audit personnel at multiple levels.
- Conducted daily project tracking, including scope, time, cost, quality, HR, communication, risk, procurement, stakeholder, and integration management.
- Improved project delivery efficiency by 25% through implementing appropriate Scrum sprint releases, daily stand-ups, improved debugging methods, and efficient personnel management.

Maryland Health Benefit Exchange, Baltimore, MD

Apr 17 – Feb 22

Sr. Tech Business Analyst

- Facilitated interviews and brainstorming sessions with stakeholders and SMEs to understand requirements for loyalty program processes.
- Gathered requirement documents and design specifications across application phases, involving collaboration with developers and deployment engineers.
- Prepared accurate, detailed, and unambiguous requirement specification documents with testable, measurable, and traceable outcomes.
- Conducted JAD sessions, user interviews, and research meetings to capture requirements and prepare BRDs.
- Acted as a liaison between the software development team and business users, ensuring developers understood business and functional requirements (BRD, FRD) and that proposed applications complied with business specifications.
- Performed fit-gap analysis to ensure the product met requirements
- Utilized JIRA for drafting user stories and managing requirements.
- Documented requirements, participated in JIRA-Sprint planning, created user stories, estimated user stories, and explained requirements to the development team.
- Conducted gap analysis to assess the difference between new required functionalities and current system capacities.
- Developed process flows to illustrate and define project requirements.
- Documented analysis results and obtained sign-off from the appropriate Product Owner.
- Worked closely with the Scrum Master in creating user stories and allocating story points.
- Documented business processes by identifying requirements in BRDs (Business Requirement Documents).
- Contributed to creating detailed test plans, including information about the test environment, business logic, and testing strategy.
- Ensured timely delivery of various documents, including BRDs, Wireframes, MS Visio source files, and content to the development team.

- Maintained the Requirement Traceability Matrix (RTM) to track requirements against designed test cases.
- Successfully coordinated User Acceptance Testing (UAT) for each project release in collaboration with end users.
- Prepared weekly and monthly project status reports, highlighting major milestones and completed tasks.

Anthem, Inc Norfolk, VA

Nov 15 – Apr 17

Sr. Business Analyst

- Assisted the project manager in creating project plan and identifying Project Milestones, Project Tasks, defining Project Scope and monitoring Resources allocated for each activity. This helped to manage constraints and drive project completion on time and within cost also ensuring business needs are met.
- Was actively involved in developing an analysis report on Organizational, Economical and Technical Feasibility of the proposed system.
- Worked with requirements identification of the proposed reporting tool by interacting with various Subject Matter Experts(SME) of Procurement department through Interviews and Prototyping. Documented System and Reporting Requirements and communicated to the appropriate technical teams
- Participated in stand-up meetings every morning and Instrumental for Sprint Planning and identification of Product Backlogs. Prioritized requirements based upon Product Backlogs. Broke down User Stories and Requirements into Tasks. Estimated task values widely exposed to the overall Scrum activities.
- Used Maven, Selenium Grid to execute Selenium automation suites on different platform, browser combinations in parallel.
- Participated in Business Management reviews of the Process Analysis and results and validation of the “To Be” process. Demonstrated the software after every sprint to the product owners.
- Responsible for preparing the RFP (Request for Proposal) according to organizational guidelines for the Vendor Selection purpose. Partnered with Vendor and IT teams to ensure appropriate features implementation and maintenance was aligned to internal client requirements. Worked with the business in analyzing and re-engineering the Product Release, BOM Creation Process

WakeMed Health & Hospitals, Raleigh, NC

Nov 14 – Nov 15

Sr. Business Analyst

- Assisted the Project Manager in preparing the Project Schedules, tracking project milestones, and Allocating Resources using Microsoft Project. Also assisted in conducting meetings with offshore developers to evaluate cost and time of implementing the system and presented the solutions to the management. Developed and managed all the Work plans, acted as the key client contact, handled all kinds of Scheduling, and facilitated all status meetings.
- Facilitated requirements identification and definition in various formats including Joint collaboration sessions with Business and IT, targeted Q&A sessions with multiple Subject Matter Experts, and one-on-one user interviews in order to provide solutions that meet business and user needs. Coordinated with a team of 10 members comprising/representing Benefit Administration, Actuarial, Underwriting and Sales departments
- Performed business process mapping for change requests and new requirements.
- Prepared Business Process Models that included modeling of all the activities of the business from the conceptual to procedural level.
- Established Business Requirements, Business Process Flows, Process Maps and narrations. Developed the Functional Specifications Document, establishing the Use Case Inventory, User and Roles Identification and Visual System Blueprint. Involved in developing the Preliminary Creative Brief, Features List, Pain Points and in finalizing and signing off Project Plans.
- Scheduling, coordinating and managing weekly content releases and maintenance releases.

- Participated in quality reviews to ensure that the developed software products met the business needs and requirements are in compliance with best practices. Conducted functional walkthroughs, User Acceptance Testing (UAT) sessions, and supervised the development of User Manuals for customers.

Excellus BCBS, Rochester, NY

Jan 14 – Oct 14

Sr. Business Analyst

- Assisted the Project Manager on defining Project Charter, Project Plan Package - Risk Management, and Configuration Management, Issue List, Work Breakdown Structure (WBS)
- Responsible for conducting Joint Application Development (JAD) sessions with Partners, Executive Sponsor, Project Managers, and End Users for the requirements gathering. Worked on HIPAA Standard Transaction Forms X12-837 for Equivalent Encounter Information, X-12-835 Claims Payment and Remittance Advice, X12-Health Care Claim status request and response, X12-270/271 Eligibility for a Health Plan and X12-820 Premium Payments.
- Worked with Business Divisions to define and document all Business and Functional requirements and Business Rules for implementation, enhancements and integration projects. Facilitated the discussions with the business users to arrive at the list of features of the application to be developed and rated the same on a Criticality Index to improve overall quality of the application. Identified and analyzed compliance related information in requirements.
- HL7 v2 was used to provide a framework and specific standards for the exchange, integration, sharing and retrieval of Electronic Health Information. Standards supporting Clinical, Medical, Behavioral, and evaluation of Health Services.
- Implemented whole life cycle of QA Methodologies starting from Planning, Capturing, Creating, Executing, Reporting and Tracking the defects using Mercury Quality Center. Helped developers identify the modules and code sections to be fixed by executing the related scenarios with different combinations of data. Coordinate and prepare for 'Go-Live'. Resolve any issues during and after 'Go-Live'.

Devon Energy, Oklahoma city, OK

Jul 09 - Dec 13

Business Analyst

- Assisted the project manager in the assessment of the construction phase as well as plan the Transition phase, with Project Development Process to meet the timelines and assisted to define project Milestones, Schedules, monitoring progress and updating plans using MS Project. Provide Status Reports that give detailed descriptions of project's progress and indicate time devoted to each task of the project.
- Worked with the Programmer analyst, technical developers and Quality assurance lead to gain consensus on requirements, deliverables and designs. Conducted follow-up workshops with users, to gather feedback at different stages in project implementation and follow it up with GAP Analysis.
- Requirements management including identifying Functional goals, Process and Data analysis, performing Business Impact and Risk Analysis, and identifying Process Flows. Authored the Functional Specifications Document and managed Functional Change Requests. Created Wireframes for the self-service portal
- Developed a Requirement Specification Document that incorporated scope, business workflow, functional requirements, data requirements, online help system requirements, and definitions
- Used Rational Unified Process (RUP)/UML to make an Object-Oriented model for the application.
- Pivotal role in the implementation of Rational Unified Process in the organization and setting standards for various business artifacts and documents.
- Test Scenarios were built and tested at the UAT levels. Assisted the Test Architect and was part of a major release. Closely involved with the QA lead & assisted to develop quality Test Cases by referring the Use cases. Organized the functional walk through to explain the changes to the testing team. Responsible for verifying and signing off the test strategy prepared by the QA team.
