

SUJAN VARMA

Email: Sujangvarma@gmail.com

Phone: (978) 954 1142

PROFESSIONAL SUMMARY

- Accomplished IT professional with 7+ years of comprehensive experience in **software application analysis, design, development, testing, delivery, and production support**. Adept at identifying business requirements and translating them into technical specifications to deliver high-quality software solutions.
- Extensive expertise in **Salesforce.com CRM Platform** with over 4 years as both an **Administrator** and **Developer**. Proficient in configuring and customizing Salesforce to meet the unique needs of businesses, including managing user permissions, designing data models, and creating automated workflows.
- Proven track record of developing enterprise-level **Lightning Applications**, leveraging **Salesforce Lightning Web Components (LWC)** to enhance user experience, improve performance, and streamline business processes.
- Experienced in integrating **Salesforce** with external systems using **APIs, middleware, and web services**. Skilled in utilizing **REST** and **SOAP APIs** to enable seamless data exchange and synchronization between Salesforce and third-party applications.
- Proficient in migrating applications from **Salesforce Classic** to **Lightning Experience**, ensuring smooth transition, preserving data integrity, and enhancing user interfaces for improved functionality and user adoption.
- Strong proficiency in **Apex, Visualforce, and Lightning Web Components (LWC)**, enabling the development of custom business logic, advanced user interfaces, and interactive components within Salesforce. Experienced in writing complex **Apex triggers, batch processes, and asynchronous Apex** to handle large data volumes and business logic.
- Extensive experience with various **Salesforce Clouds** including **Sales Cloud** and **Service Cloud**, delivering tailored solutions to enhance sales productivity, customer service efficiency, and overall business performance.
- Adept at utilizing **Agile methodologies** for iterative and incremental software development, participating in **Scrum ceremonies** such as **sprint planning, daily stand-ups, and retrospectives** to ensure timely and quality deliverables.
- Demonstrated ability to work efficiently with business users and technical teams, gathering requirements, providing technical guidance, and ensuring alignment between business objectives and technical solutions.
- Ensures successful project delivery and user satisfaction through rigorous **testing, effective stakeholder communication, and post-deployment support**. Skilled in utilizing tools like **JIRA** for project tracking and collaboration.
- Proficient in customizing standard **Salesforce Objects** (Accounts, Contacts, Opportunities, Products, Cases, Leads, Campaigns, Reports, Dashboards) to meet application requirements, utilizing tools like **Process Builder** and **Flow** to automate business processes and enhance productivity.
- Experienced in creating **Triggers, Apex Classes, Force.com API, Standard Controllers, Custom Controllers, and Controller Extensions**, enabling the development of robust and scalable applications on the Salesforce platform.
- Expertise in developing numerous **Lightning Web Components (LWCs)**, enhancing the **Aura Framework**, and migrating standard and custom objects to **Lightning Experience**. Skilled in building reusable components and leveraging **Lightning Data Service** for efficient data management.

- Skilled in integrating **Salesforce** with in-house legacy **ERP systems** using **Apex Web Services**, **WSDL**, and **outbound messaging**. Proficient with tools such as **Apex Data Loader** for data migration, **Eclipse IDE**, and **Force.com IDE** for development and debugging.
- Familiar with the **Configure Price Quote (CPQ)** process, experienced in implementing **CPQ solutions** using **Salesforce CPQ** and **Apttus CLM**, streamlining the quoting process, and ensuring accurate pricing and contract management.
- Strong background in implementing business logic and **batch processes** using **Stored Procedures** and **Functions**, enabling efficient data processing and complex calculations within Salesforce and external databases.
- Experienced in creating **technical requirement specification documents** and participating in business requirements meetings for analysis and design. Skilled in documenting technical solutions and providing training to end-users and technical teams.
- Expertise in implementing **Agile methodologies**, participating in **Scrum** and **Kanban** for iterative and incremental software development. Experienced in using tools like **JIRA** and **Confluence** for project management and collaboration.

TECHNICAL SKILLS:

Salesforce Technologies	Salesforce CRM, Salesforce SFA, Salesforce Marketing Cloud, Salesforce Velocity, Apex Language, Apex Classes/Controllers, Apex Triggers, Visualforce Pages/Components, Lightning Components (Aura Framework, Lightning Web Components), SOQL, SOSL, Workflow & Approvals, Process Builder, Flows, Omnichannel, Omniscripts, Integration Procedures, Profiles, Permission Sets, Roles, Sharing Settings, Field-Level Security, Record-Level Security, Custom Objects, Tabs, Page Layouts, Validation Rules, Custom Links, Buttons, Actions, Compact Layouts
Languages	Apex, Java, JavaScript, HTML, CSS, COBOL, JCL, Easytrieve, AMPScript, SQL, Bootstrap, jQuery, XML, SSIS, ETL
Tools	Apex Data Loader, Force.com IDE, Visual Studio Code, Eclipse IDE, Force.com Explorer, GIT, Copado, ANT Migration Tool, IDX Workbench, JIRA, Tableau, HP Quality Center, IBM Debug Tool, Salesforce Lightning Inspector
Other Tools	Apex Data Loader, Web Services APIs like SOAP, Force.com Excel Connector, Force.com Explorer, Apex Data Loader, File-Aid, Endeavour, Tivoli Workload Scheduler, File Manager, IBM Debug Tool, Eclipse Metadata, GIT, Copado, ANT Migration Tool, IDX Workbench, JIRA, Salesforce Lightning Inspector, Visual Studio Code, HP Quality Center
Database	VSAM, Oracle (11g/10g/9i/8i), DB2, MS SQL Server, MS Access
Environment	Mainframe (VisionPlus), Force.com Platform (Sandbox and Production), Salesforce.com CRM, Salesforce.com SFA, Salesforce.com Marketing Cloud, Eclipse IDE Plug-in, Visual Studio Code, ANT Migration Tool, IDX Workbench, Copado, Visualforce Pages, Custom Objects, Custom Tabs, Controllers, Email Services, Workflow & Approvals, Security Controls, Reports, Dashboards
Operating Systems	Windows XP/Vista/7, MVS, Z/OS

CERTIFICATIONS:

- Salesforce Certified Administrator.
- Salesforce Certified Platform Developer I.
- Salesforce Certified Platform App Builder.
- Salesforce Trailblazer

EDUCATION:

- Bachelor's of Engineering in Computer Science – India
- Masters in Information Technology from University of New Hampshire .

PROFESSIONAL EXPERIENCE:

Client: Stryker Corporation, Kalamazoo, MI

Jan 2024 to till date

Role: Sr. Salesforce Developer

Responsibilities:

- Participated in business requirements analysis and technical design documentation, implementing customizations using **Apex controller classes**, extensions, **triggers**, and **Visualforce** pages.
- Established object relationships using **Lookup**, **Master-Detail**, and **Junction Object relationships**. Developed rich user interfaces with custom **CSS** in **Visualforce pages**, leveraging **JavaScript** and **jQuery** for client-side validations.
- Utilized **Visualforce** components such as **apex: form**, **apex: pageBlock**, **apex: pageBlockSection**, **apex: commandButton**, **apex: actionSupport**, **apex: actionFunction**, **apex: pageBlockTable**, and **apex: repeat** for developing pages.
- Wrote **SOQL**, **SOSL**, **Aggregate**, and **Relationship queries** in **Apex classes** and triggers for optimized data retrieval from sObjects.
- Developed **Apex classes** for outbound integration with external applications, generating necessary **Apex stubs** from **WSDL** using **WSDL2Apex**. Created **Apex REST web service** classes for inbound calls to Salesforce, accessed via **DataPower**.
- Implemented numerous **Lightning Web Components (LWCs)** for **DOM manipulation**. Enhanced **Aura Framework** by adding **Aura Attributes** and **Aura Handlers** for event logic and interactions in **Lightning Applications**.
- Developed **Apex batch classes** to archive **Chatter** posts and custom object interaction data periodically. Created custom **Objects**, **Fields**, **Dependent Picklist Values**, **Validation Rules**, **Page Layouts**, **Search Layouts**, and **Tabs**.
- Executed administrative tasks including creating **Users**, **Profiles**, **Roles**, **Permission Sets**, **Page Layouts**, **Record Types**, and configuring **sharing rules** based on organizational hierarchy. Implemented **CPQ solutions** using **Salesforce CPQ** and **Apttus CLM**.
- Configured **Single Sign-On (SSO)** for user authentication using **SAML 2.0** and **My Domains**. Implemented **Service Cloud Service Console**, configured **Email-to-Case**, and enabled **Communities** for case management.
- Developed **Workflow Rules**, **Approval Processes**, and defined actions such as **Tasks**, **Email Alerts**, **Outbound Messages**, and **Field Updates**. Engaged in **CPQ customization**, developing and designing **Guardrails**, **Validations**, **Upgrade/Downgrade**, and **Amend flows**.
- Queried Salesforce tables using **SOQL** and **SOSL** on **Force.com**. Applied custom **Aura design tokens** to **Base Lightning Components**, **Aura Components**, and **LWCs**.
- Created communication templates for **Email Alerts** using **Text**, **HTML**, and **Visualforce** types. Customized standard features like **Auto-Response**, **Assignment**, and **Escalation Rules** on **Lead** and **Case objects**.
- Developed custom **Reports** and **Dashboards** for business users and managers, creating custom reports using **Visualforce pages**. Integrated the **CPQ system** with multiple **CRMs** including **Salesforce** and **CRM On Demand**.
- Migrated Salesforce Classic applications to **Lightning Experience** for a richer user interface and better user experience.
- Created **Lightning Components** and **server-side controllers** to meet business requirements, including migrating standard and custom objects to **Lightning Experience**.
- Developed Enterprise Level **Lightning Applications** using technologies like **Lightning Design Systems**, **Lightning App Builder**, and **Lightning Component features**.

Environment: Salesforce.com CRM, Apex Classes, Controllers, Visualforce pages, Web Services (SOAP, REST, WSDL), Sales Cloud, Service Cloud, Custom Objects, CPQ, LWC, Tabs, Email Services, Workflows, Approval processes, Data loader, Cast Iron, Reports, Dashboard, Sharing rules, AURA, Force.com IDE, HTML, CSS, JavaScript, JQuery, Windows 2003.

Responsibilities:

- Served as a Salesforce Administrator and Developer, creating design documents based on requirements, implementing applications upon client approval of demonstrated prototypes.
- Designed and implemented custom **objects, tabs, page layouts**, and **validation rules**. Created custom **Visualforce components** and attributes to override standard **Visualforce components**.
- Worked with standard objects like **Accounts, Reports, Contacts, Events, Tasks**, and **Dashboards**, customizing the **Service Cloud** application.
- Created custom **objects, workflows, validations, approvals**, custom **dashboards**, and **reports**. Developed an **Apex trigger** to generate tasks upon case creation, updating on the case owner's homepage.
- Conducted unit testing before handing the application to the testing team, troubleshooting issues, and utilizing **email services** to receive inbound messages into Salesforce.
- Migrated code using **change sets** and **Eclipse**, converted **S-Controls** into **Visualforce pages**, and **JavaScript** for buttons and links, debugging issues during testing.
- Authored user manuals, participated in client calls to monitor progress, and used the **sandbox environment** for development, deploying code to production after testing.
- Implemented Salesforce.com groups for sales and support user groups, integrated **web services** to extract data from external systems, displaying it in **Salesforce pages**.
- Utilized **Data Loader** for data operations like inserting, updating, upserting, and bulk exporting/importing data from **Salesforce objects**, reading from **CSV files**.
- Engaged in development activities, including creating custom **objects, workflows, validations**, and developing custom **dashboards** and **reports**.
- Automated manual processes, participated in client calls to ensure progress, and migrated and debugged code using **change sets** and **Eclipse**.
- Created modern Enterprise **Lightning Apps** combining **Lightning Design System, Lightning App Builder**, and **Lightning Component features**.
- Developed Salesforce.com custom applications using **Apex, Visualforce**, and **AppExchange**.
- Created multiple **Lightning Web Components (LWC)** regarding service case console page.
- Worked on **Salesforce1 Platform** to build Mobile Apps by enabling **Lightning Components** for use in Salesforce1 mobile platform.
- Implemented **Salesforce Lightning Web Components (LWC)** for a small set of users within the organization, developing **Lightning components** and **server-side controllers** to meet business requirements.

Environment: Apex Language, Triggers, Visualforce pages, Workflows, Apex Data Loader, Reports and Dashboards, Email Services, Approval Processes, Security Settings, Service Cloud.

Responsibilities:

- Engaged with business users for analysis, requirements gathering, and development. Conducted detailed analysis of technical and business requirements, collaborating with business partners to fully utilize Salesforce CRM capabilities.
- Developed various **Apex classes, triggers**, and **controller classes** to meet application needs, working with standard objects like **Accounts, Reports, Contacts, Events, Tasks**, and **Dashboards**.
- Created custom **objects, tabs, master-detail** and **lookup relationships, formula fields**, and **validation rules**. Designed and deployed **validation rules, approval processes, custom tabs**, and **auto-responses**.
- Set up **roles, profiles, page layouts**, and configured **permissions** based on the organizational hierarchy. Managed **field-level security settings**, resolving customer complaints, and providing improvement suggestions.

- Designed **Visualforce pages** for enhanced flexibility and aesthetics, developing **Cascading Style Sheets (CSS)** for Visualforce page effects.
- Implemented **picklists, lookups, master-detail relationships, dependent picklists, validation rules, and formula fields** for custom objects. Defined **lookup** and **master-detail relationships**, created **junction objects**, and established object connectivity.
- Performed Salesforce design, development, administration, and operational support roles. Managed **login restrictions**, user **password resets**, created **email templates**, and **inbound emails** using **Visualforce**.
- Configured **sharing settings** for data access levels. Created **workflow rules, email alerts, related tasks, and field updates**.
- Migrated standard and custom objects in standard experience to **Lightning Experience**.
- Retrieved data from on-premise databases using **REST API's** and displayed it within the **Lightning component**.
- Enabled **Aura Framework** by adding **Aura Attributes** and **Aura Handlers** for events to focus on logic and interactions in **Lightning Applications**.
- Worked on migrating components using **Force.com Ant Migration Tool, Change Sets, Flosom, and Workbench** from DEV to QA, SIT, UAT, and production instances.

Environment: Salesforce.com CRM, Force.com platform, Chatter, Apex Classes, Visualforce Pages, Custom Objects, Custom Tabs, Controllers, Email Services, Workflow & Approvals, Security Controls, Reports, WSDL, Eclipse IDE, Windows.

Client: Value Labs, Hyderabad, India.

Jan 2017 – Mar 2019

Role: JAVA Developer

Responsibilities:

- Participated in analysis, design, development, and testing phases of the **Software Development Lifecycle (SDLC)**.
- Developed and implemented **GUI functionality** using **JSP, JavaScript, CSS, and Servlets**; created web interfaces using **JSP technology** for flexible page design.
- Utilized the **Validation framework** for client and business validations; authored user documentation for application modules.
- Engaged in code reviews, defect tracking, fixing, and enhancements; developed **Action classes** and **Action Forms** using **Servlets, Struts APIs, and the MVC design pattern**.
- Developed and consumed **RESTful and SOAP web services** for integration with external systems; implemented **JDBC** connections to interact with **relational databases** like **Oracle** and **MySQL**.
- Utilized **Hibernate** for **ORM** (Object-Relational Mapping) to persist Java objects to database tables; employed **Maven** for build automation and dependency management.
- Used **Git** for version control, managing code repositories and facilitating team collaboration; developed **Spring MVC** applications, integrating **Spring Boot** for rapid application development.
- Configured and deployed applications in **Apache Tomcat** and **JBoss** application servers; leveraged **JUnit** for writing and executing unit tests, ensuring code reliability and quality.
- Integrated **JMS** (Java Message Service) for messaging and communication between distributed systems; developed front-end components using **HTML5, CSS3, Bootstrap, and jQuery** for responsive and dynamic web applications.
- Applied design patterns such as **Singleton, Factory, and Observer** for robust and maintainable code structure; utilized **Eclipse IDE** and **IntelliJ IDEA** for efficient coding, debugging, and testing.
- Implemented security measures using **Spring Security** for authentication and authorization; optimized application performance using caching techniques and profiling tools like **VisualVM**.
- Developed and maintained **RESTful APIs** using **JAX-RS** and **Spring REST**; conducted performance tuning and optimization for **SQL queries** and **Java applications**.
- Participated in Agile methodologies, including **Scrum** and **Kanban**, for iterative and incremental software development; automated testing and deployment processes using **Jenkins** and **Docker**.

Environment: Java, JSP, JavaScript, CSS, Servlets, Tomcat Server, Oracle, MySQL, Hibernate, Maven, Git, Spring MVC, Spring Boot, JBoss, JUnit, JMS, HTML5, CSS3, Bootstrap, jQuery, Eclipse IDE, IntelliJ IDEA, Spring Security, VisualVM, JAX-RS, Spring REST, Jenkins, Docker, Linux, Windows Server.
