PROFESSIONAL SUMMARY

Database Developer with 8+ years of experience designing and optimizing data solutions using Oracle and SQL Server. Demonstrated expertise in crafting efficient database architectures, writing and tuning SQL queries, and ensuring data integrity. Proven collaborator in agile environments with a focus on aligning IT systems with business needs. Adept at implementing robust security practices and maintaining high-performance database systems.

TECHNICAL SKILLS

- **Database Technologies:** SQL Server, MySQL, Oracle
- **ETL & Data Integration:** Talend Data Integration, Talend Data Management Platform, Talend Administration Center (TAC), Talend Studio, Talend Open Studio, Informatica PowerCenter, DataStage, AWS Glue, Azure Data Factory (ADF)
- **Cloud Platforms & Storage:** Amazon Redshift, Amazon S3, AWS Lambda, AWS RDS, DynamoDB, Azure Data Lake Storage (Gen2), Azure Blob Storage, Snowflake (Cloud Data Platform)
- **Data Modeling & Warehousing:** Dimensional Modeling (Star Schema, Snowflake Schema), Data Vault Modeling, Data Warehousing, Master Data Management (MDM)
- **Programming & Scripting:** SQL, PLSQL, JSON, XML, Shell Scripting (for job orchestration)
- **APIs & Integration:** REST APIs, SOAP APIs, JSON processing, API Integration, Talend ESB (Enterprise Service Bus)
- **Big Data & Streaming:** Spark, Apache Kafka, Big Data Solutions
- **Version Control & DevOps:** Git (Version Control), Jenkins (CI/CD), Azure DevOps, GitLab (Version Control)
- **Data Quality & Governance:** Talend DQ (Data Quality), Data Profiling, Data Lineage, Data Quality Checks, Metadata Management, Data Anomaly Detection, Data Security & Compliance, Data Protection
- **Agile & Project Management:** Agile (Scrum), Sprint Planning, Retrospectives, Stand-ups, Iterative Delivery
- **Job Orchestration & Optimization:** Talend Job Orchestration, Job Scheduling Tools, Automated ETL Job Execution, ETL Job Performance Tuning, Data Load Optimization, Data Processing Optimization, Error Handling in ETL Jobs
- **Infrastructure & Automation:** Terraform

EXPERIENCE

JPMC

May 2023 - Present
NYC, NY

Senior ETL Talend Developer

- Designed and implemented complex ETL pipelines using Talend Data Integration and Talend Data Management Platform, ensuring seamless data extraction, transformation, and loading (ETL) across diverse data sources.
- Developed and optimized Big Data solutions, leveraging tools like Azure Data Factory (ADF), Azure Data Lake Storage (Gen2), and Azure Blob Storage for scalable, cloud-based data processing and storage.
- Applied Snowflake and data vault modeling methodologies to design and deploy robust, enterprise-level data warehousing solutions, enabling reliable and efficient data storage and retrieval.
- Collaborated on designing and implementing enterprise data warehousing solutions, ensuring high performance, scalability, and flexibility for large datasets across departments.
- Tuned Talend Jobs for optimal performance, enhancing processing speed and ensuring efficient execution for high-volume data workflows, while handling complex data transformations and automating error recovery processes.
- Integrated REST APIs for external data exchange and optimized JSON data processing within ETL workflows, ensuring real-time data integration and accessibility.
- Led data lineage and data profiling initiatives to track data flow throughout the system, ensuring complete visibility and transparency across the enterprise.
- Ensured adherence to data quality standards (DQS) by implementing comprehensive data quality checks and monitoring data consistency, accuracy, and reliability throughout the ETL process.
- Leveraged SQL Server and Oracle databases to write and optimize SQL queries for efficient data retrieval and transformation, applying SQL tuning techniques and Query Analyzer tools to maintain high performance and data integrity.
- Utilized Talend Administration Center (TAC) for job orchestration, monitoring, and scheduling, providing centralized management for all Talend ETL jobs and configurations.
- Led Agile development practices, facilitating sprint planning, retrospectives, and stand-ups while guiding the team through project iterations and ensuring on-time delivery.
- Collaborated with cross-functional stakeholders to define business requirements, align ETL designs with business needs, and provide technical insights to enhance solution development.
- Provided mentorship and leadership to junior developers, promoting a cooperative environment for knowledge sharing and skill development within the team.
- Implemented CI/CD pipelines using Azure DevOps and Git, automating deployment, testing, and version control for Talend jobs, ensuring smooth code integration and consistent implementations.
- Ensured the integration of Spark for distributed data processing, optimizing ETL performance for large-scale data environments.

- Championed data governance initiatives to enforce data standards, security policies, and compliance with industry regulations across the organization.
- Provided ongoing production support for all ETL processes, troubleshooting issues, and executing corrective actions to maintain smooth operations.

American Eagle

Jan 2023 - Apr 2023

ETL Talend Developer

Pittsburgh, PA

- Developed and maintained ETL pipelines using Talend Data Integration and Talend Studio, ensuring efficient data extraction, transformation, and loading from diverse sources into the data warehouse.
- Performed complex data transformation and cleansing tasks to ensure accurate and consistent data across systems, meeting business requirements.
- Wrote and optimized SQL/PLSQL queries for data processing and transformation within relational databases (MySQL), ensuring performance and data integrity.
- Applied dimensional modeling techniques, specifically Snowflake schema, to design and implement scalable data warehouse solutions.
- Ensured efficient data warehousing by designing and optimizing large-scale data storage and retrieval architecture, supporting business intelligence applications.
- Managed job orchestration for seamless ETL job execution and scheduling, ensuring timely and automated data workflows.
- Implemented robust error-handling strategies, ensuring ETL jobs could gracefully handle failures, log errors, and send alerts for issues that needed attention.
- Conducted performance tuning on ETL processes, optimizing data loads and improving system efficiency for high-volume datasets.
- Integrated and consumed SOAP APIs for data exchange, parsing XML data efficiently as part of ETL workflows.
- Managed version control for Talend jobs, transformations, and configurations using Git, ensuring traceability and smooth collaboration within the team.
- Utilized Jenkins for CI/CD, automating ETL job testing, deployment, and version control.
- Worked in an Agile/Scrum environment, contributing to sprint planning, task prioritization, and meeting deadlines within iterative release cycles.
- Troubleshot and resolved technical issues related to ETL jobs, ensuring smooth execution and minimal downtime.
- Supported live ETL processes by diagnosing root causes and implementing solutions to avoid future outages.

Optum Global Solutions

Aug 2018 - Aug 2022

ETL Developer

India

- Developed and maintained ETL workflows using Talend Open Studio to ensure efficient data integration from multiple source systems into the data warehouse environment.
- Created and optimized complex SQL queries for data transformation, ensuring accurate data extraction, transformation, and loading across relational databases (primarily Oracle).
- Performed data mapping between source and target systems to maintain data consistency and integrity, ensuring smooth data integration and transformation processes.
- Implementing data profiling techniques to analyze incoming data quality identified and addressed issues early in the ETL process.
- Conducted data quality checks to identify and rectify data anomalies, improving the accuracy and consistency of reports generated from transformed data.
- Managed error handling and ensured that ETL jobs handled exceptions and failures gracefully, facilitating smoother processing and minimal downtime.
- Leveraged job scheduling tools to automate ETL job execution, ensuring timely data updates and minimizing manual intervention.
- By working within an Agile/Scrum framework and collaborating with cross-functional teams, I contributed to meeting project milestones and delivering results in iterative sprints.
- Documented all ETL processes, data mappings, and transformations in clear, concise technical documentation to facilitate future development and troubleshooting.
- Managed version control for ETL code and configurations using Git, ensuring consistency and traceability throughout the development lifecycle.

WEQ Technologies

Nov 2016 - Apr 2018

ETL Developer

India

- Assisted in designing and developing robust ETL workflows using Informatica PowerCenter, ensuring seamless data extraction, transformation, and loading across multiple source systems.
- Wrote and optimized complex SQL queries to support data transformation logic and improve the performance of ETL pipelines within relational database environments.
- Conducted thorough data mapping exercises between source and target systems to ensure accurate and reliable data integration and consistency across downstream applications.
- Executed data cleansing processes to eliminate inconsistencies, duplicates, and null values, improving data quality and reliability for analysis and reporting.
- Applied solid analytical thinking to troubleshoot and resolve issues in ETL workflows, with a strong focus on debugging and error handling in both development and test environments.

- Participated in implementing data warehousing solutions by supporting dimensional modeling, historical data loads, and incremental refresh processes.
- Collaborated within an Agile team setting, attending daily stand-ups and sprint reviews while contributing to user stories and iterative delivery cycles.
- Maintained comprehensive technical documentation for ETL processes, data models, and transformation rules to support future enhancements and team knowledge sharing.
- Managed version control for ETL scripts and SQL code using Git, ensuring consistent and traceable changes across development and production environments.
- Followed best practices in data transformation logic to meet business requirements while ensuring optimal performance and scalability across high-volume data sets.
