(Open to Relocate)

Results-driven **Data Analyst** with 3+ years of experience in **automation, data visualization, and business intelligence** across **financial services, healthcare, and technology**. Proficient in **Python, SQL, Tableau, Power BI, and Alteryx**. Achievements include **reducing data migration time by 70%, cutting operational costs by 20%**, and automating workflows to **boost efficiency by 80%**. Certified in Alteryx Designer Core and **AWS Fundamentals**, with expertise in developing advanced dashboards, **ETL pipelines**, and process automation to deliver impactful business solutions. **Actively seeking opportunities** to lead impactful analytics projects and innovate data strategies to enhance business performance and stakeholder engagement.

AWARDS, RECOGNITION, CERTIFICATIONS

- [Data Science Bronze Badge by E&Y](#)
- Data integration Bronze Badge by E&Y
- Alteryx Designer Core Certified
- AWS Fundamentals: Going Cloud-Native
- Web Scraping API Fundamentals in Python
- Principles of Secure Coding

SKILLS

- **Databases:** Snowflake, Microsoft SQL Server,
- **Programming Languages:** Python, R, Power Query, DAX
- **Tools & Libraries:** Excel, PowerPoint, PowerApps, Power Automate
- **Data Visualization:** PowerBI, Tableau, Alteryx

PROFESSIONAL EXPERIENCE

ATLANTA POSTAL CREDIT UNION

Edison, NJ

Data Analyst

Jun 2023 - Dec 2024

Designed and optimized data migration processes achieving significant efficiency gains and cost savings. Streamlined workflows through innovative solutions, ensuring a seamless and accelerated transition.

- Implemented automation for data migration from **Affinity Bank to Atlanta Postal Credit Union's servers**, collaborating with internal and external teams to ensure accurate and reliable data transfer. The automation reduced data transfer time by **70%**, streamlined the process, and ensured smooth integration of **critical data** between the organizations
- **Proficient in SQL, Python, and R**, leveraging statistical methods and machine learning techniques to derive actionable insights
- **Utilized Power BI, Tableau, and Excel** to develop interactive dashboards, streamline reporting, and enhance data visualization
- Conducted a comprehensive analysis of existing migration processes to identify inefficiencies and bottlenecks. This analysis led to a successful data transition and a **20%** reduction in operational expenses, optimizing resource allocation and minimizing manual efforts
- Developed and implemented an automation script using **Informatica iPaaS**, reducing manual labor by **45%**. The solution improved operational efficiency, achieving a **50%** time saving compared to traditional workflows and driving optimization across the migration process

- Provided detailed documentation and recommendations for process improvements, including the identification of areas that led to cost savings and efficiency gains, resulting in improved project outcomes and a smoother transition for both organizations

ERNST & YOUNG

Gurugram, India

Data Analyst

Jun 2020 - Aug 2022

Led the development of an application for ADP, leveraging Microsoft PowerApps to streamline operations and enhance client collaboration. Resulting in improved communication, task management, and operational efficiency within the ADP ecosystem.

Developer

- Led the development of a comprehensive application for a **leading payroll solutions company, ADP**, using **Microsoft PowerApps** and **SharePoint online**
- **Configured Microsoft Flow** to automate approval processes and status updates, improving client collaboration. Engineered and configured Microsoft Flow to introduce auto-approval and status update functions, establishing a streamlined collaboration framework between ADP and its clients. The result was a highly efficient and automated workflow that improved communication and task management within the ADP ecosystem

Client: ABSA

Streamlined the tracking of employee status changes, reducing manual intervention and improving accuracy in monitoring access revocation processes.

Identity and Access Management

- Designed and developed a dynamic **Power BI** dashboard integrating data from **Alteryx** for financial insights. Aiming to track and monitor leavers, removers, and various employee categories. This dashboard provided detailed insights into access management, ensuring compliance and identifying instances where access was not revoked after employees left the organization
- Contributed to **ETL** processes by transforming operational and access management data into actionable insights. Validated and cleaned data to support effective decision-making, ensuring accurate tracking of employee status changes and access revocation compliance
- Implemented role-based access controls (**RBAC**) and created audit-ready reports to enhance system security and ensure compliance with regulatory requirements, a key focus for organizations in access management

Client: Citadel

Automated inefficiencies in financial data workflows for Citadel by designing an advanced Alteryx-based automation module. Tackled the challenge of time-intensive manual data handling and multi-source integration by streamlining processes and enhancing data accuracy with customized financial reports.

ETL Developer

- Engineered a robust **automation module** utilizing **Alteryx** for Citadel, a \$50 billion Financial Services company. This module facilitated in-depth analysis of financial data and the creation of customized reports for future business needs
- Revolutionized the workflow by retrieving data from multiple sources resulting in an impressive **80% reduction** in time spent on manual labor
- Collaborated with cross-functional teams to identify process bottlenecks and optimize workflow automation, leading to scalable and repeatable solutions for future initiatives.

Cross-Functional Analytics Support

Performed data integration process by extracting, transforming & loading financial data from multiple data sources & storing them in a data warehouse for assurance of clients

- Delivered comprehensive data integration support by extracting, transforming, and loading (**ETL**) financial data from multiple sources, storing it in a data warehouse for assurance clients. This facilitated seamless access to reliable and accurate financial data for decision-making and reporting

- Validating General Ledger data, ensuring accuracy and consistency across financial records. This included providing valuable insights into the financial year by utilizing **AnalyzerSQL** to analyze and extract meaningful trends and patterns in the data, driving informed decision-making for clients

PROJECTS

Remote Patient Monitoring System

- Developed a progressive web application for telemedicine and remote sensing using wearable devices.
- Integrated real-time data storage on ThingSpeak cloud and implemented email alerts for critical conditions.

Web Scraping Tool

- Created a web scraping tool with Beautiful Soup to count occurrences of user-specified words on websites.

Vehicle Crash Dashboard

- Designed interactive Tableau dashboards to provide deeper insights into vehicle crashes in Maryland area
