

Thomas Johnson

Senior Software Engineer

(227) 251-7920 | Gainesville, FL 32603 | thomasjohnson0426@gmail.com

Summary

Accomplished **Full Stack Software Engineer** with over **10** years of expertise in backend and frontend development, specializing in **C#, JavaScript, TypeScript**, and proficient in cloud services and **DevOps**.

Skilled in **.NET, ASP.NET**, and **.NET Core** for backend development, alongside **Angular** for building dynamic user interfaces. Committed to creating robust, scalable, and high-performance web applications that deliver seamless user experiences

Proven track record of architecting and implementing **cloud-based solutions**, adhering to industry best practices for security, performance, and scalability. Known for **leading cross-functional teams** and mentoring developers, driving innovation and delivering cutting-edge software solutions on time.

Passionate about **continuous learning** and committed to staying ahead of emerging technologies. An adaptable problem solver with strong communication skills, thriving in dynamic, fast-paced environments where **collaboration** and **innovation** are key to success.

Key Skills

- **Languages:** C#, C++, JavaScript (ES6+), Typescript, SQL, PHP, Python
- **Frameworks/Libraries:** .NET, ASP.NET, .NET Core, Blazor
- **Frontend:** Angular, Mobx, RxJS, Context API, HTML5, CSS, SCSS, Material UI, Tailwind CSS, Bootstrap
- **Paradigm:** Microservice, SOLID principle, Singleton Pattern, Factory Pattern, OOP, MVC
- **Cloud Services:** Microsoft Azure (App Service, Azure Functions, Azure SQL, Blob Storage), AWS (Lambda, S3, EC2, RDS)
- **Database:** MS SQL Server, PostgreSQL, LINQ, CosmosDB
- **CI/CD:** Docker, Kubernetes, Jenkins, Azure DevOps
- **Message Brokers:** Rabbit MQ, Apache Kafka
- **Testing:** NUnit, xUnit, MS Test, Jest, Cypress, Test Driven Development
- **Documentation & API:** Swagger, MS Sharepoint, Confluence, SOAP, Restful API, GraphQL
- **Agile Methodologies:** Agile, Scrum

Education

Florida International University

Bachelor's Degree in Computer Science

Aug 2008 – Dec 2012 | Miami, FL

GPA: 3.7

Relevant Experience

Intuit | Mountain View, CA

Feb 2021 – Dec 2024 | **Senior Software Engineer**

- Led the development of a **financial** application using **Angular**, and **TypeScript** on the frontend, and **.NET, ASP.NET, .NET Core** on the backend, ensuring high performance, scalability, and maintainability.
- Designed and implemented **RESTful Web APIs** and **micro services architecture** using **.NET Core**, facilitating seamless communication between frontend and backend systems, and enabling efficient data exchange and processing.
- Worked on some of the new features of **Angular 16,17,18** like new if else syntax, ng-templates, and form validators and Implemented client-side Interface using **Angular 16,17,18** and **AngularJS** to structure **JavaScript** code in an **MVC**.
- Involved in the analysis, design and development and testing phases of **Software Development Life Cycle (SDLC)**
- Created **AngularJS** directives, factories, and services for developing single page web applications.
- Worked with the development team, involved in creating **MVW (Web API)** to implement **AngularJS** framework for client-side rendering to optimize the front end.
- Hands-on experience with **TypeScript** in **Angular** framework, developing front-end applications with **RxJS** observables and **TypeScript** services.
- Implemented **design patterns** such as **Singleton**, **Factory**, and **Observer** to ensure clean code organization, enhance maintainability, and improve system performance.
- Integrated with **.NET Core**, **C#**, and **ASP.NET MVC** backend services, facilitating efficient data processing and business logic implementation.
- Worked on all the required **Microsoft SQL Server**, **Stored Procedures**, **User Defined Functions**, **Triggers** and **Views** using **T-SQL** as per business logic.
- Wrote complex **T-SQL** queries for data extraction, loading the Data in **RDB (Relational Database)** Landing through **SSIS** Packages.
- Optimized **SQL** queries, implemented indexing strategies, and fine-tuned stored procedures to improve database performance by up to 30%.
- **Optimized database queries** and managed database connections using **ADO.NET**, improving query execution times by 30%, and worked closely with DBAs to design complex stored procedures and triggers.
- Developed and deployed **.NET applications** on **AWS** using services like **Elastic Beanstalk**, **EC2**, and **Lambda** to ensure scalable and high-availability environments.
- Applied **AWS** services such as **EC2**, **Lambda**, **S3**, **RDS**, etc., to support scalable and resilient application architectures
- Integrated Azure Cloud services such as **Azure App Service**, **Azure SQL Database**, and **Azure Blob Storage** for deployment, hosting, and data storage, leveraging the scalability, reliability, and security of cloud computing.
- Utilized **SharePoint** and **Confluence** to foster collaborative work environments, streamline document management, and promote knowledge sharing among cross-functional teams.
- **Built and maintained microservices** architecture in a **containerized environment** using **Docker** and **Kubernetes**, enabling efficient scaling and deployment of services across multiple cloud environments like **Azure** and **AWS**.
- Enhanced backend services developed with **.NET Core** by **optimizing API** endpoints for faster response times and implementing asynchronous processing.
- Implemented **Typescript** to enforce strong typing and **object-oriented principles**, resulting in a 50% reduction in runtime errors and a more maintainable codebase.
- Orchestrated the entire **Software Development Life Cycle (SDLC)** from requirements gathering and design to coding, testing, deployment, and maintenance.
- Experience in using **Version Control Systems** like **GIT** to keep the versions and configurations of the code organized.
- Implemented **Test-Driven Development (TDD)** and **Behavior-Driven Development (BDD)** methodologies to ensure high code quality and reliability.
- Developed and integrated complex user authentication mechanisms using **.NET Core Identity**, **OAuth**, **OpenID Connect**, and **JWT tokens**, ensuring secure and scalable authentication and authorization processes.
- Managed multiple software development projects using **Jira**, **Confluence** as the primary project management tool, ensuring timely delivery of high-quality products within budget and scope.
- Maintained communicator with **stakeholders**, translating technical concepts into understandable terms to align with business objectives.
- Managed task decomposition, workload distribution, and team collaboration, driving software delivery in **Agile** environments.
- Demonstrated strong **leadership** skills as a **technical lead**, guiding and **mentoring junior team members**, and fostering a collaborative and innovative work environment focused on **continuous learning** and **improvement**.
- Actively participated in agile development methodologies including **Scrum** and **Kanban**, leading **sprint planning**, **daily stand-ups**, and **retrospectives**, and driving cross-functional collaboration to deliver high-quality software solutions on time and within budget

Cognizant | Teaneck, NJ

Aug 2017 – Feb 2021 | **Software Engineer**

- Spearheaded the development of a cutting-edge **e-commerce** platform using **.NET Core**, **C#**, and **ASP.NET MVC** on the backend and **Angular**, **RxJS**, **Angular Material**, **Bootstrap** on the frontend.
- Implemented a **microservices** architecture to modularize the platform, addressing scalability challenges and improving maintainability.
- Implemented **Angular components**, **services**, **modules**, and **routing** to build reusable and maintainable codebases, reducing development time by 30%.
- Designed and built responsive and adaptive UIs using **Angular Material**, **Bootstrap**, and **CSS3**, improving mobile usability and customer engagement.
- Utilized **RxJS** for reactive programming and optimized asynchronous data streams and state management, ensuring smooth and efficient UI updates.
- Integrated server-side **Blazor** to leverage **.NET Core** for server-side rendering and improved performance.
- Developed scalable and modular applications by applying design and architectural principles such as **MVC**, **MVVM**, **Object-Oriented Design**, **SOLID** principles, and **DRY** practices.
- Collaborated with backend teams to integrate **.NET Core**, **C#**, and **ASP.NET MVC** services, ensuring efficient data processing and business logic implementation.
- Ensured the **Secure storage** and transmission of sensitive **user information**.
- Implemented **RESTful APIs** and **GraphQL** to communicate with content management systems and data pipelines, enabling data retrieval and manipulation.
- Utilized **Entity Framework Core**, **Dapper**, and **LINQ** for efficient data access and manipulation across **SQL Server**, **PostgreSQL**, and **NoSQL databases** like **MongoDB**, significantly improving data query performance.
- Leveraged **AWS** and **Azure** service operators to streamline continuous deployment (**CD**) from **GitHub** to **Kubernetes**, enhancing deployment efficiency.
- Implemented secure authentication mechanisms using **ASP.NET Identity** and **OAuth**.
- Used asynchronous programming models in **C#** to manage tasks that involve I/O operations, allowing the application to remain responsive while performing background tasks.
- Enhanced application performance through **garbage collection tuning**, **memory profiling**, and optimizing **thread management**, resulting in a 30% improvement in server efficiency.
- Improved application performance by analyzing and resolving SQL query inefficiencies in **PostgreSQL**.
- Implemented optimization strategies resulting in significant improvements in application response times and overall system efficiency.
- Built and maintained **CI/CD** pipelines using **GitHub Actions**, streamlining development, testing, and deployment processes.
- Experience in using **Version Control Systems** like **GIT** to keep the versions and configurations of the code organized.
- Collaborated on implementing real-time communication features using **SignalR** and handled protocol data serialization with **Protobuf**.
- Implemented comprehensive **testing** strategies including **unit testing**, **integration testing**, and **end-to-end testing** using frameworks like **NUnit**, **xUnit**, and **Jasmine/Karma**, ensuring code quality, reliability, and robustness.
- Solved it by implementing event-driven architecture using **Azure Event Grid**, **Azure Service Bus**, **Azure Event Hubs**, **Azure Functions**, **Azure Event Hub Capture**, enhancing reliability and data consistency.
- Collaborated with cross-functional teams to implement features following **Agile/Scrum** methodology, including conducting code reviews, writing technical documentation, and mentoring junior developers to ensure project success.
- Improved code quality using **Swagger**, **MS Sharepoint**, and **Confluence**.
- Worked on different kind of project management systems like **Trello**, **Jira**.

Cigna | Bloomfield, CT

Mar 2013 – Aug 2017 | **Software Developer**

- Worked in migration of various back-end **PHP** systems to **C#** services, transforming a significant monolithic application into a **microservices** architecture, emphasizing expertise in **.NET**.
- Developed **RESTful APIs** and micro services architecture with **.NET Core**, **C#**, and **ASP.NET MVC**, enabling scalable and efficient communication between frontend and backend systems.
- Assisted in managing the application's database interactions using **Azure SQL**, contributing to the design of efficient data models and writing queries to ensure secure and compliant data handling.
- Used **Entity Framework** for database interactions, creating and modifying data models, and performing CRUD operations.
- Demonstrated advanced **DevOps** skills with container orchestrations like **Kubernetes** and managed **CI/CD** operations in **Jenkins** and **Gitlab**, streamlining software deployment in **Microsoft** ecosystem.

- Worked with **SQL Server** to manage data, write stored procedures, and optimize queries for better performance. Assisted with database migrations and maintenance tasks.
- Integrated third-party **APIs** for **real-time tracking, secure payments**, and efficient order processing, enhancing the functionality and usability of the platform.
- Helped maintain technical documentation for projects, ensuring clarity and accessibility for **team members** and **stakeholders**.
- Wrote unit tests using **NUnit** and **MSTest** to validate code and ensure functionality, improving code reliability.
- Collaborated with cross-functional teams in an **Agile** environment, participating in sprint planning, daily stand-ups, and retrospectives.
- Documented features, bug fixes, and processes, ensuring clarity for future developers and ease of maintenance.
