DevOps Engineer

SUMMARY

- 5+ years of professional IT experience specializing in Azure DevOps, cloud infrastructure automation, and CI/CD pipeline management.
- Extensive hands-on experience designing, provisioning, and securing cloud-native architectures using Microsoft Azure.
- Expertise in managing Azure infrastructure, including Azure Kubernetes Service (AKS), Azure App Services, Azure Monitor, and Azure Key Vault.
- Strong proficiency in Infrastructure as Code (IaC) using Terraform, ARM Templates, and Bicep.
- Skilled in scripting and automation using PowerShell, Bash, and Python for infrastructure provisioning and configuration management.
- Experience in DevSecOps, integrating security best practices into DevOps workflows to ensure compliance and system reliability.
- Adept in building and maintaining CI/CD pipelines using Azure DevOps, Jenkins, and GitHub Actions.
- Comprehensive understanding of microservices architecture and containerization with Kubernetes and Docker.
-

PROFESSIONALEXPERIENCE

- Worked in Datapro Information Technology Services Pvt Ltd (Pune ,Maharashtra India) as Sr.Devops Engineer from Nov 2018 to Jan 2023.

EDUCATIONAL QUALIFICATION

- Masters In Computer Science-Information Technology) Webster University, USA, 2025

Technical Skills:

- **Cloud Platforms:** AWS (EC2, S3, VPC, IAM, RDS, Lambda, CloudWatch), Azure (AKS, Azure DevOps, Azure Monitor, Azure Key Vault), GCP (GKE, Cloud Functions, Cloud Storage).
- **Cloud Platforms:** AWS (EC2, S3, VPC, IAM, RDS, Lambda, CloudWatch), Azure (AKS, Azure DevOps, Azure Monitor, Azure Key Vault), GCP (GKE, Cloud Functions, Cloud Storage).
- **Infrastructure as Code (IaC):** Terraform, Pulumi, CloudFormation, Ansible
- **Containerization & Orchestration:** Docker, Kubernetes (EKS, AKS, GKE), Nomad
- **DevOps & CI/CD:** GitHub Actions, Jenkins, ArgoCD, Azure DevOps
- **Monitoring & Observability:** Prometheus, Grafana, OpenTelemetry, Loki, Elastic Stack (ELK), Azure Log Analytics
- **Programming & Scripting:** Rust (async runtimes: Tokio, async-std), Bash, Python
- **Security & Compliance:** HashiCorp Vault, AWS KMS, Azure Key Vault, RBAC, Zero Trust Security
- **Networking & Load Balancing:** Nginx, Envoy Proxy
- **Version Control & GitOps:** GitHub, GitLab, Bitbucket, GitOps (FluxCD, ArgoCD)

WORK EXPERIENCE:

Project 1

Location :Remote

Client : Wipro

Team Size : 10

Environment: Azure DevOps, Azure Kubernetes Service (AKS), Azure App Service, Azure Monitor, Terraform, Jenkins, Docker, Kubernetes, Git, Azure Logic Apps, Azure Functions, Azure SQL, Azure Key Vault, Azure Service Bus.

Role: Senior DevOps Engineer

Responsibilities:

- Designed and deployed scalable cloud-native infrastructure using Terraform and ARM Templates, ensuring infrastructure reliability.
- Automated infrastructure provisioning workflows with Azure DevOps, cutting manual work by 70%.
- Implemented and managed Azure Kubernetes Service (AKS) clusters, enabling efficient microservices deployment.
- Built and optimized CI/CD pipelines using Jenkins, Azure DevOps, and GitHub Actions, improving deployment times by 40%.
- Integrated Azure Monitor and Azure Log Analytics for real-time monitoring of infrastructure and application performance.
- Developed automated testing and security checks within CI/CD pipelines to enforce compliance and secure deployments.
- Utilized Azure Key Vault to securely manage sensitive configurations and secrets across environments.
- Managed Docker containers and Kubernetes clusters for high-availability and scalable application deployments.
- Built and maintained scalable SQL databases (Azure SQL) and ensured high availability with geo-replication.
- Integrated Azure Service Bus for event-driven architecture, ensuring real-time and reliable microservice communication.
- Configured and managed load balancers and traffic routing policies, ensuring optimal application performance.
- Applied disaster recovery strategies using Azure Site Recovery and Azure Backup for seamless failover.
- Optimized infrastructure for cost savings, reducing cloud infrastructure expenses by 25%.
- Led troubleshooting efforts during production incidents, cutting resolution times by 35%.
- Collaborated with development teams to ensure seamless DevSecOps integration and security compliance.
- Implemented scaling policies for Azure App Services, ensuring responsive application performance during traffic spikes.
- Led the design and implementation of a cloud-based disaster recovery solution using Azure Site Recovery and Azure Backup to ensure seamless business continuity.
- Architected a multi-region disaster recovery strategy, improving service availability and reducing system downtime for critical applications.
- Developed automated failover strategies for Windows and Linux VMs across regions, minimizing manual intervention and enhancing operational efficiency.

Project 2

Location: Remote

Project name. : Lendly (<https://lendly.com>)

Client: NCP Finance, Dayton, Ohio,USA

Environment: Azure, Azure DevOps,

Role: Azure DevOps Engineer

Project Description:

Lendly is a financial platform providing quick loans to employees of registered employers. This project involves designing and managing scalable cloud architectures and automating workflows to ensure seamless loan processing using Azure DevOps practices and cloud services.

Responsibilities:

- Worked closely with developers to optimize Rust-based applications for deployment on Azure cloud services.
- Designed and implemented Azure Kubernetes Service (AKS) clusters for scalable microservices architecture using Helm charts.
- Integrated Azure Monitor, Log Analytics, and Application Insights for comprehensive monitoring and reporting of application performance.
- Automated CI/CD pipeline creation using Azure DevOps, enabling faster deployment cycles by 40%.
- Leveraged Azure Event Grid and Logic Apps for event-driven workflows, enabling efficient and timely transaction processing.
- Built secure API integrations with financial institutions to ensure smooth and compliant data exchange.
- Managed and optimized containerized workloads with Docker, ensuring faster app deployment times and reduced infrastructure overhead.
- Utilized Istio service mesh to enhance microservices communication with built-in security features.
- Deployed blockchain nodes for Ethereum-based financial transactions, ensuring secure and transparent lending activities.
- Implemented continuous delivery pipelines that improved deployment efficiency and reduced production errors.
- Optimized Azure Kubernetes environments, ensuring optimal application availability and scalability.
- Configured and maintained custom dashboards in Grafana and Kibana for real-time application and infrastructure insights.
- Integrated OpenTelemetry and Prometheus for effective distributed tracing and performance monitoring across services.
- Applied security best practices, using Azure Key Vault for securing critical configurations and ensuring regulatory compliance.
- Managed disaster recovery mechanisms with geo-redundant storage and Azure Backup to ensure system resiliency..

DECLARATION :

I hereby inform that the above-mentioned information is correct up to my knowledge and I bear the responsibility for the correctness of the above-mentioned particulars.
