

MUHAMMAD UZAIR SEYAL

CONTACT

-  502-665-2911
-  uzair.seyal23@gmail.com
-  Louisville, KY 40245

SKILLS

- Python (including Data Analytics)
- Java
- C and C++
- JavaScript
- MySQL Databases
- AWS
- Azure
- Power BI
- HTML5
- Logic Design
- Computer Hardware Analysis & Maintenance
- Database & Data Structures
- Algorithm Creation & Analysis
- IEEE Research
- Project Lead
- Pipeline Planning
- Machine Learning
- Cloud Computing
- Software development
- Problem-solving
- Team collaboration
- Front-end development (including Frameworks & Performance Optimization)

PROFESSIONAL SUMMARY

Recent Computer science graduate with a foundation in software development, machine learning, and cloud computing. Seeking first ever full-time job opportunity to get his foot in the door and achieve an actual career related to the computer science degree.

EXPERIENCE

September 2024 - December 2024

Augment Reality Developer

Snap Inc., Santa Monica, CA

- Developed multiple AR experiences using advanced deep learning models in JavaScript & Python Frameworks and computer vision algorithms, implemented a real-time face tracking and an environmental understanding through custom-built neural networks, all while optimizing the performance to meet the mobile platform requirements.
- Made a portfolio of snapchat lenses utilizing cutting-edge technologies such as TensorFlow, cloud computing infrastructure, and WebGL shaders, all while increasing user engagement metrics and integrating CI pipelines for automated testing and deployment to emphasize on error management.
- Led end-to-end development of AR experiences from conceptualization to production, incorporating advanced computer graphics techniques, real-time 3D rendering, and distributing it across several architectures for all platforms as well as collaborating with cross-functional teams to optimize resource utilization as well as increase the performance with the cutting-edge technology.

April 2024 - September 2024

Artificial Intelligence Researcher

National Research Group, Houston, TX

- Conducted the development of scalable AI risk classification system using Python and machine learning techniques, analyzing over 1,000 academic papers and industry reports to create a searchable database to identify in risk prediction and reduce client decision-making time.
- Joined in a cross-functional collaboration with Fortune 500 tech companies to develop 15+ comprehensive case studies in AI implementation risks, utilizing data visualization tools like Tableau, mainly PowerBI to present complex findings in client satisfaction rate and successful risk mitigation strategies.

- Back-end development (including Frameworks & Performance Optimization)
- User experience design
- Code validation
- API integration
- Cross-platform development
- Hardware and software installation
- Virtualization
- Mobile app development
- Testing and debugging
- Git proficiency
- Agile development methodologies
- Development lifecycle management
- Test automation
- Software architecture design
- Cross-functional collaboration
- Code review and refactoring
- Application programming
- Artificial intelligence (including Strategy, Implementation, Security, Expertise, and Marketing)
- Web development projects
- UI and UX prototyping
- Software documentation

LANGUAGES

- **English**
Native

- Designed and implemented an automated research pipeline using NLP algorithms and cloud computing (AWS, Azure) to process and analyze the technical documents, translating the complex AI concepts from the documents to actionable business insights that increased stakeholder understanding while maintaining strict NDA compliance.

August 2024 - December 2024

Junior Software Developer

Cisco Systems, San Jose, CA

- Led optimization of Cisco's Grabit cybersecurity toolkit by implementing with SHA-256 cryptographic validation, reducing redundant downloads by 40% across 400+ developer deployments using Golang in a modified and revamped open-source software. Developed error handling mechanisms ensuring graceful recovery from validation failures.
- Architected and implemented testing frameworks achieving 95% code coverage, featuring four critical test suites validating download optimization, resource management, and cryptographic checksum verification. Enhanced system resilience by implementing robust error handling procedures across multiple operating systems.
- Collaborated in an agile team environment with international stakeholders through weekly sprints, managing complex version control workflows and delivering three major pull requests that enhanced toolkit performance. Successfully integrated optimization changes while maintaining strict security protocols and corporate compliance standards.

EDUCATION

December 2024

Bachelors in Computer Science

University of Louisville, Louisville, KY, US

REFERENCES

For Both Internships (Snapchat & National Research Group):

LaRae Snoddy

Director Of Program Management

(917) 983-0880

referencechecks@extern.com

For Cisco Contract:

Raphael Badin

Senior Developer & Project Manager

rabadin@cisco.com

For SPARC Hope Volunteering:

Cassie Wingfield

Marketing Coordinator

cassie@sparc-hope.org

CERTIFICATIONS

- Microsoft Office Specialist Master Certification (**MOS**)

VOLUNTEER EXPERIENCE

September 2022 - December 2022

Junior Web Developer

SPARC Hope, Louisville, Kentucky

- Led a dynamic team of four to revamp SPARC Hope's website, significantly enhancing functionality and user experience. Successfully coordinated team efforts, leveraging each member's skills to achieve our project goals, and ensuring smooth collaboration to identify and implement key improvements.
- Spearheaded the development and implementation of several new web pages using WordPress. Drove the successful migration to a modern UI by incorporating HTML5, which enhanced both the functionality and visual appeal of the site. Designed a responsive interface that improved the overall user experience, contributing to the organization's mission.
- Utilized strong technical expertise to build a more user-friendly and efficient website. Used HTML5 and other web technologies to create a responsive design, improving site usability and accessibility. This project not only demonstrated my proficiency in web development but also showcased my ability to apply technical skills to real-world scenarios.
