

VANITA KANAJE

Senior Test Automation Engineer

✉ vanita.kanaje@gmail.com | ☎ +1 971 222 4828

| PROFESIONAL SUMMARY

- Software Test Engineer with 9 years of experience in designing and implementation comprehensive test automation frameworks. Expertise in full stack testing from unit to E2E ,with string focus on building scalable and maintainable automation solutions.
- Extensive experience of various automation tools such as Selenium, JUNIT, Cypress, TestNG and Cucumber.
- Developed and executed comprehensive automated test suites using Robot Framework and Selenium Library to perform functional and regression testing on web applications
- Assisted in creation of detailed, well-structured test plan and test cases.
- Substantial work experience on manual functional, integration, regression, system testing, accessibility testing, cross browser, cross device, smoke, and black box testing etc.
- Hands-on experience in developing automation frameworks using selenium.
- Competent in different coding languages like Java and Python.
- Good working exposure in different project building tools like Maven.
- Seasoned in creating different CI (Continuous Integration) pipelines using Jenkins
- Hands-on experience in Ready API/Postman for API testing.
- Proficient in Agile testing methodology and successfully completing the automation ticket for the story within the sprint.
- Actively participating in different Agile ceremonies such as sprint planning, refinement, amigos and retro etc.
- Certified Scrum Master.

TOOLBOX

- | | |
|------------------------------|---|
| • Programming Languages | : Core Java, Python |
| • Testing Framework & Tools | : Selenium WebDriver,Selenium Grid,Cypress
TestNG, JUnit,PyTest |
| • IDE | : IntelliJ Idea, VS Code, PyCharm and Postman |
| • Technologies | : Mobile/Web Application Testing,
Api Testing, Accessibility Testing |
| • Defect tracking Tool | : Jira |
| • Methodology | : Agile |
| • DevOps & CI/CD | :Jenkins,Docker,AWS |
| • Other Tools & Technologies | :Git,Jira,Confluence,Maven,MySQL |

WORK EXPERIENCE

05/07/2020 to 01/04/2024 Employer: Oracle India Private Limited- Senior QA Engineer

Project: Spectra UI Components

Technologies:

BDD using Cucumber Framework, Rest Assured, Selenium WebDriver, TestNG, Postman UI.

Location: Bengaluru, India

Description: Develop reusable components which application developer can drag and drop into the page.

Roles and Responsibilities:

- Handled the implementation of Cucumber as the primary behavior-driven development (BDD) tool, leading to improved collaboration between development and testing teams.
- Selenium + Java Test Automation Framework with Page Object Model(POM).
- Collaborated closely with development team to discuss test results and recommended modifications to meet the quality standards.
- Performed functional, regression, integration and user acceptance testing to ensure comprehensive coverage.
- Participated and gained good working knowledge of different Agile ceremonies (user story grooming, sprint planning and sprint retrospective).
- Collaborated with business analysts and stakeholders to create and refine Gherkin syntax-based feature files for Cucumber, fostering a shared understanding of software requirements.
- Well-versed in developing test cases using the Cucumber framework.
- Worked and gained proficiency in backend testing using Rest Assured APIs.

04/10/2018 to 04/20/2020 Employer: Alten Calsoft Labs-Senior Software Engineer

Client: Zebra Technologies

Project: MC330R RFID Reader

Technologies: Python, UIAutomator, Pytest Framework

Location: Bengaluru, India

Description:

The MC3390R long-range RFID handheld reader brings a new level of efficiency and accuracy to inventory management, order fulfillment, cross-docking, and more. The integrated long-range antenna supports a best-in-class RFID read range, and coupled with Zebra's high-performance ASIC radio technology, delivers higher throughput, so inventory counts can be accomplished more quickly and accurately. With Zebra's signature rugged design, the MC3390R is built for your semi-industrial environments, yet is lightweight with the right ergonomics for all-day comfort. And the large touchscreen, physical keypad and Android OS deliver an intuitive and flexible platform for your RFID application needs today and tomorrow.

Roles and Responsibilities:

- Running CTS, GTS, VTS, CTS verifier for Google Certification for GMS and Non-GMS device
- Loading the BSP(OS) on the device for GMS and NGM Device
- Test the different number of channels for the different frequency range devices using spectrum analyzer

04/01/2015 to 04/06/2018

Employer: Harman Connected Services – Senior Software Engineer

Project: LandisGyr

Technologies: Python, Robot Framework , SQL

Location: Bengaluru,India

Description:

This project deals in energy domain dealing with smart meters for electric, gas and water over RF signals. The project covers the development of the features that need to communicate with the meters and read the meter data for the utility (Electric companies) so that the utility can bill their customers. Coding requires reading the binary packets from the meters and converting them to readable format followed by the utility. Support for deployment, remote meter reading, data management or related services is provided by experts drawing on extensive industry experience.

Roles and Responsibilities:

- Implementing Robot Framework using python.
- Convert the manual test cases to automation test script using seleniumlibrary.
- Implementing the dashboard for maintaining the Test cases for automation
- Executing the test cases and sharing the results
- Understanding the BRD and performing the actions
- Involved in Functional, Integration, Regression, System, Smoke Testing
- Handling the meters devices and other hardware components in the laboratory.
- Preparing the Test Matrix and publishing to the customer after each release

05/02/2014- 03/31/2015

Employer: First Advantage Private Limited – Software Engineer.

Project: Findly Application Tracking Systems

Technologies: Automation Selenium

Location: Bengaluru,India

Description:

Findly Applicant Tracking System automates and streamlines the recruiting process via a defined workflow, making it easier for recruiters to hire the right candidate. It's a full featured Applicant Tracking System for HR and staffing departments that makes the recruitment process easier, right from raising a requisition to making an employment offer. Thus, it enables recruitment team to focus on acquiring the right talent. It integrates the entire recruitment process starting from requisition submittal to posting the job in the website, scheduling interviews and tracking candidates progress based on the hiring process.

Roles and Responsibilities:

- Understanding business requirements.
- Writing Test cases for Automation (Selenium)
- Participated in identifying the Test scenarios and designing the Test cases.
- Prepared and Executed Test Cases as per System Requirements.
- Developed the Automation Test Scripts
- Execution of test scripts using Selenium.
- Reviewing the Test Reports and Preparing Test Summary Report.

EDUCATION

Bachelor of Engineering in Computer Science & Engineering From
Kammavari Sangha Institute of Technology, Karnataka. India.

RECOGNITION

-
- Received 'Rockstar' award from LandisGyr client
 - Received Sparkle Award from Zebra
