

Vernon Dickson

Bridgeport, Bridgeport,, US | +1 917-231-9193 | vernon.dic1210@gmail.com

Professional Summary

As a highly skilled software engineer with **11 years of experience**, I specialize in building and deploying **web applications** using modern technologies and best practices. I have expertise in **cloud-based platforms** such as **AWS**, utilizing **Serverless** and **Containers** to design scalable and efficient solutions. My proficiency extends to **Node.js**, **React**, and **SQL**, with solid experience in **Oracle** and **PostgreSQL** databases, ensuring high-performance and secure applications. I follow **Test-Driven Development (TDD)** to ensure that all code is clean, tested, and reliable. I am well-versed in using **Terraform** and **Jenkins** for **CI/CD**, driving automation and efficient deployment processes. In addition to my technical expertise, I bring strong **collaborative skills**, working closely with cross-functional teams to solve complex **technical problems** and improve system performance. I also have experience **mentoring developers** and fostering an environment of continuous learning. While I have a **basic understanding of C#**, I also possess knowledge of **Python** and **Shell scripting**, which adds flexibility to my role. My technical background is complemented by an understanding of the **insurance** and **reinsurance industries**, making me a valuable asset in these domains.

Senior Software Engineer, Worldpay

Jun, 2021 - Present

Cincinnati, OH, Remote

- Led the development and maintenance of secure, scalable payment processing solutions.
- Designed and implemented microservices architectures to handle high transaction volumes.
- Collaborated with cross-functional teams to deliver innovative payment solutions and optimize user experience.
- Enhanced fraud detection and security measures, ensuring compliance with PCI-DSS and industry standards.
- Optimized transaction processing systems to improve performance and reduce latency.
- Ensured compliance with financial regulations, maintaining data privacy and security.
- Mentored junior engineers and contributed to the continuous improvement of development practices.

Senior Full Stack Developer, Flexi Software

Feb, 2020 - May, 2021

Shelton, CT

- Built multiple web applications using Angular with ASP.NET Web API and developed customer-facing features using C#, ASP.NET Core, CSHTML, JavaScript, Kendo UI, and Entity Framework.
- Worked in Agile development environments to ensure rapid iteration, continuous delivery, and adaptability to evolving business requirements.
- Designed secure RESTful .NET Core APIs for Angular frontends, using .NET Identity Core for authentication and SSL/WCF for secure client-server communication.
- Utilized JWT and OAuth 2.0 for advanced authentication and authorization, and connected APIs to various databases (MySQL, PostgreSQL, MongoDB, SQL Server) using NuGet packages.
- Developed SSIS packages for data migration, authored stored procedures, and generated reports using SQL Server Reporting Services (SSRS).
- Implemented dashboards and dynamic MVC Razor views using Kendo UI and worked extensively with Angular for building SPAs following best practices like Dependency Injection and Services.

Senior Full Stack Developer, Cigna Healthcare

Jan, 2016 - Feb, 2020

Bloomfield, CT

- Collaborated closely with business stakeholders to understand and analyze system requirements, ensuring alignment with project goals.
- Developed a responsive Angular web application using modern tools and patterns such as modules, components, services, Angular CLI, Webpack, and Angular Material, while adhering to TypeScript conventions.
- Designed and implemented a secure RESTful .NET Core API backend, integrating with third-party APIs and leveraging .NET Identity Core for authentication and access control.
- Used LINQ for efficient data retrieval, worked with SSIS for SQL Server integration, and built a CI/CD pipeline using Azure DevOps, Docker, Terraform, and YAML.

Software Engineer, Spine Wave Inc

Nov, 2013 - Oct, 2015

Shelton, CT

- Development and maintenance of websites for special business ventures currently being developed. All development in C# .NET, using ADO.NET in reference to M/S Access database, as well as JavaScript, JQuery and AJAX.
- Analyzed management data processing requirements and translated them into a Winforms .NET based system, linked to a local M/S Access database.
- Developed and maintained a .NET Winforms application in support of school's student database.
- Winforms application included student registration, class attendance, and tracking of student progress, as well as financial tracking of student payments. Also included are lap-top applications to record student test scores, to be uploaded to the main database.

.NET Developer, Aquinas Consulting

Jan, 2012 - Sep, 2013

Milford, CT

- Designed and implemented a web application using ASP.NET Web Forms, C#, HTML, CSS3, ADO.NET, jQuery, AJAX, User Controls, and Master Pages to ensure modularity and reusability.
- Applied N-tier architecture by organizing the application into Presentation (UI), Business Logic Layer (BLL), and Data Access Layer (DAL), using ADO.NET for database interaction.
- Developed stored procedures and displayed results using Grid View and Repeater controls, supporting features like inline editing, paging, and custom menus.
- Improved performance and user experience by caching data, utilizing Session and Cookies for state management, and integrating AJAX AutoComplete for enhanced search.

EDUCATION

Southern Connecticut State University, BS, Computer Science (2006-2011)
