

ADAM NWAZO

Houston, TX 77008

(740) 206-9679 | adamnwazo0909@gmail.com

Professional Summary

Results-driven Senior Full-Stack Software Engineer with over 10 years of experience, specializing in developing scalable web applications for large-scale projects. Led cross-functional teams to enhance customer experiences, boosting user engagement. Proven expertise in Python, Ruby on Rails, Node.js, JavaScript, TypeScript, React, and AWS, with a strong focus on continuous learning and development.

Technical Skills

- **Programming Languages:** Python, Ruby, JavaScript, TypeScript
 - **Frontend Technologies:** React, Redux, Vue.js, HTML5, CSS3, D3.js, Chart.js
 - **Backend & Frameworks:** Django, Flask, FastAPI, Ruby on Rails, Node.js, Express.js, NestJS
 - **API Architecture:** RESTful APIs, GraphQL APIs
 - **Authentication:** OAuth 2.0, JWTs
 - **E-commerce & Payment Integration:** Stripe, PayPal, PCI-DSS Compliance
 - **Cloud & DevOps:** AWS (EC2, S3, Lambda, RDS, Elastic Beanstalk, Redshift, CloudWatch, SNS), Jenkins, Docker, AWS Load Balancing, Auto Scaling
 - **Data Management & Security:** PostgreSQL, Elasticsearch, AWS Redshift, SSL/TLS Encryption, HIPAA Compliance
 - **Data Visualization & Analytics:** Data Visualization with D3.js, SQL Queries, AWS Redshift, Customer Analytics
 - **Other Technologies:** GitHub Actions, WebSockets, Automated Testing, CI/CD Pipelines
 - **Soft Skills:** Agile Methodologies, Cross-functional Collaboration, Team Leadership, Mentorship, Problem-Solving, Communication
-

Professional Experience

Revature – Reston, VA

Senior Software Engineer (April 2020 - Present)

- Developed an e-commerce platform for a retail client, enabling scalable online shopping experiences for over 100,000 daily users. The platform supported secure payment processing, inventory management, and customer analytics, contributing to a 50% increase in sales.

- Utilized Python and Ruby on Rails for the backend, handling complex order processing, and integrating secure payment gateways like Stripe and PayPal, which reduced checkout times by 30%.
- Built a responsive, dynamic front-end with React and Redux, allowing customers to seamlessly browse products, view real-time stock availability, and receive personalized recommendations based on browsing behavior.
- Implemented RESTful APIs for real-time inventory updates and order tracking, ensuring accurate product availability and improving customer satisfaction.
- Managed AWS infrastructure with EC2, S3, and Lambda, which provided scalability and reduced hosting costs by 20%.
- Integrated Elasticsearch to enhance product search capabilities, resulting in a 40% improvement in search accuracy and response time.
- Developed an admin dashboard using Vue.js, which allowed store managers to monitor sales, update inventory, and analyze customer data, empowering them to make data-driven decisions.
- Ensured platform security with SSL/TLS, implemented role-based access controls, and adhered to PCI-DSS compliance for secure payment transactions.
- Optimized CI/CD pipelines using Jenkins and Docker, reducing deployment times by 50% and increasing development efficiency.

Citeline – New York City, NY
Software Engineer (July 2016 - March 2020)

- Developed a clinical trial management platform for a pharmaceutical client, leveraging Ruby on Rails and PostgreSQL to streamline data collection, patient tracking, and regulatory reporting, which reduced data entry errors by 45%.
- Used Python for automated data validation scripts, supporting real-time patient recruitment tracking and remote monitoring, significantly accelerating trial timelines.
- Designed a secure patient portal with Ruby on Rails and integrated OAuth 2.0 for secure patient access, allowing participants to access trial information, submit health data, and complete surveys.
- Built data visualization tools using JavaScript and D3.js, enabling researchers to analyze trial results and generate regulatory reports, which simplified the reporting process and ensured timely submissions.
- Integrated an alert system with AWS SNS and CloudWatch to notify researchers of adverse events, facilitating immediate action and improving patient safety.
- Implemented data encryption and secure data handling protocols using SSL/TLS, ensuring HIPAA compliance and safeguarding patient information.
- Conducted regular performance evaluations and optimized backend processes, which improved response times by 30% using AWS Load Balancing and Auto Scaling.

Nexient – Plano, TX
Frontend Developer (April 2014 - June 2016)

- Developed a sales automation platform for a retail client using Vue.js and Node.js, which enabled real-time lead management and tracking. The platform included automatic follow-up reminders, increasing lead conversion rates by 25%.

- Implemented pipeline visualization with Vue.js and Chart.js, providing sales managers with a comprehensive view of the sales process, which helped identify bottlenecks and optimize strategies.
 - Designed user interfaces using HTML5, CSS3, and JavaScript, which improved navigation and data access, resulting in a 20% increase in user satisfaction and adoption.
 - Built personalized dashboards with JavaScript and React, allowing sales agents to track their performance and set sales goals, which boosted productivity by 30%.
 - Automated report generation with Python and integrated with the client's CRM using RESTful APIs, reducing time spent on manual reporting and enabling data-driven decision-making.
-

Education

Bachelor of Science in Computer Science

University of Houston–Clear Lake

Graduated: 2011
