SUMMARY

Salesforce Developer with 3+ years of hands-on experience designing scalable Lightning solutions, building Apex-driven automation, and delivering secure integrations across banking and enterprise environments. Skilled in leveraging Flows, LWC, Apex, SOQL, data modelling, and Salesforce security frameworks to streamline operations and enhance user experience. Adept at collaborating within Agile environments to deliver high-quality features, optimize data processing, and support multi-sandbox release cycles with exceptional reliability. Proven ability to translate complex business requirements into robust technical solutions using modern DevOps, integration patterns, and analytics-driven insights. Committed to continuous improvement and delivering impactful, user-centric Salesforce enhancements.

SKILLS

- **Salesforce Clouds:** Sales Cloud, Service Cloud, Experience Cloud, Health Cloud, FSC (exposure)
- **Core Admin:** Standard/Custom Objects, Fields, Record Types, Page Layouts
- **Security & Access:** Profiles, Permission Sets, Roles, Sharing Rules, Field-Level Security (FLS)
- **Automation:** Flows (record-triggered, screen, scheduled), Approval Processes, Validation Rules, Duplicate Rules
- **Data Operations:** Data Loader, Import Wizard, Dataloader.io, Workbench, SOQL/SOSL, Data Migration & Mapping, De-duplication
- **Analytics:** Reports & Dashboards, Tableau, Power BI, CRM Analytics (Tableau CRM), Einstein GPT (basic)
- **Development:** Apex (triggers, classes, async Batch/Queueable/Schedulable, test classes), LWC, Visualforce
- **Integrations:** REST/SOAP APIs, Named Credentials, Salesforce Connect, External Services, MuleSoft (basic), Application Integrations
- **Dev Tools & Release:** VS Code, SFDX CLI, Git, GitHub, Bitbucket, Copado, Gearset, Sandbox Management, Change Sets
- **Methods:** Agile/Scrum, Jira, Confluence, UML (ERD, sequence/class), Stakeholder Training & UAT, ITIL Best Practices, Root Cause Analysis
- **Data Governance:** Validation Frameworks, Duplicate Management, Matching Rules
- **Enterprise Systems:** Oracle NetSuite, SAP Concur, Workday Adaptive, Boomi

WORK EXPERIENCE

PNC Bank

July 2025 – Present

Salesforce Developer

- Spearheaded enhancements within the Customer Financial Insights Modernization project by developing scalable Lightning components that elevated advisor efficiency and improved cross-team data visibility.
- Crafted sophisticated OmniStudio solutions and tailored Experience Cloud interfaces that streamlined digital onboarding workflows, contributing to an 18% decrease in processing time.
- Orchestrated secure system-to-system communication by building Apex-driven integration layers using Named Credentials and JWT-based authentication for financial data exchange.
- Accelerated high-volume data operations by deploying asynchronous Apex patterns (Queueable and Batch) to minimize processing delays during heavy transactional periods.
- Elevated release quality by establishing SFDX-aligned development structures and automated regression testing, resulting in a 30% boost in deployment stability.

PNC Bank

August 2024 – May 2025

Salesforce Developer – Intern

- Supported development of the *Digital Lending Workflow Revamp* project by configuring custom objects, page layouts, and business rules that enhanced loan-processing visibility for service teams.
- Built and refined Record-Triggered and Screen Flows to automate case routing and customer verification, improving operational consistency across lending operations.
- Developed SOQL-driven data retrieval utilities and assisted with data cleansing efforts using Workbench and Data Loader to maintain accurate borrower and financial records.
- Created modular Lightning Web Components (LWCs) to surface real-time loan application statuses, strengthening transparency between advisors and underwriting teams.
- Integrated third-party financial tools through External Services and REST API configurations, ensuring seamless data exchange without compromising security protocols.

- Collaborated with QA and business analysts to validate requirements, executing UAT scenarios and reducing post-deployment defects by 22%, while contributing to sprint deliverables with 95% on-time completion.

Dell Technologies

January 2021 – July 2023

Salesforce Developer

- Engineered core platform enhancements as part of the *Global Partner Enablement Automation* project, developing scalable data models and workflows that improved visibility into partner lifecycle activities.
- Built complex Apex triggers and handler frameworks adhering to enterprise design patterns to enforce partner compliance rules and streamline operational processes.
- Designed intuitive Visualforce interfaces and customized UI components to support sales teams in managing partner onboarding, certifications, and renewals.
- Implemented Salesforce-to-NetSuite and Salesforce-to-Boomi integrations using REST/SOAP services, ensuring accurate financial and operational data exchange across global systems.
- Conducted comprehensive code reviews and performance tuning, reducing query load and improving component response times for high-volume partner transactions.
- Created advanced reporting structures and dashboard frameworks, enabling leadership to track partner engagement metrics and identify growth opportunities with 15% greater accuracy.
- Managed multi-sandbox development environments and coordinated deployment activities using Git-based branching strategies to maintain release integrity.
- Partnered with product owners, architects, and QA teams to validate functional requirements and support UAT cycles, contributing to 98% defect-free production releases.

PROJECTS

Hospital Patient Intake & Triage Management System

- Developed a full-stack web application using React, Node.js, and MongoDB to streamline patient registration, triage categorization, and doctor assignments.
- Implemented priority-based triage logic using clinical scoring rules to simulate real emergency-room workflows.
- Integrated SMS notifications using Twilio API to alert patients about estimated wait times and room assignment updates.

Financial Fraud Detection Using Machine Learning

- Analysed real credit card transaction datasets and built ML models using Python, Scikit-learn, and Random Forest to classify fraudulent vs. legitimate transactions.
- Performed feature engineering and applied oversampling techniques (SMOTE) to resolve class imbalance issues.
- Evaluated models using precision, recall, F1-score, and ROC curves, selecting an optimized model with high fraud detection accuracy.

EDUCATION

- **Master in Computers Science**
CAMPBELLSVILLE UNIVERSITY | **CGPA: 3.8**
- **Bachelors of Technology in Computer Science**
ANURAG GROUP OF INSTITUTION | **CGPA: 8.0**

August 2023 – May 2025

July 2018 – June 2022
