Summary:

7+ years of experience as a **QA Automation** and **Test architect**, **Scrum master**, **Software developer** as well as **Project manager** while being involved in all aspects of the **Software Development Life Cycle** and **Software Testing Life Cycle** in domains such as Banking, Telecom and Insurance. A professional with a sponge for a mind and can fit into and wear hats across several roles in the Information Technology sector.

- Collected and translated **Business, Functional** and **Non-functional requirements** into test documentations and then used that information to contribute to the efficiency of the test cycles.
- Engaged as a **Scrum master**, with an impact of a **cultural shift in the team**, affecting the efficiency in time spent in **stand ups, grooming, planning** and **retrospectives**.
- Managed teams, projects as a leader with an energy that has set an example of a cultural paradigm of **good behavior** and **motivation**.
- Experienced in **White** and **Black box** testing techniques for **GUI, Functional, Integration, System, Regression, Back-End** and **User Acceptance Testing**.
- Hands-on Experience on developing **Automation, Applications** and **Mock Services** with Programming languages such as **C#, Java, Groovy, JavaScript, Python, SQL, HTML, CSS** and **Gherkin**.
- Hands-on Experience with **Selenium** suite of test tools for **Automation**.
- Able to successfully track and log defects using **Jira** and **Team Foundation Server**.
- Strong knowledge and experience of **Waterfall** and **Agile** methodologies and ability to work with **SCRUM**.
- Hands-on knowledge and experience on various approaches in test **Frameworks** including **Behavior Driven, Test Driven, Data Driven, Module Based** and **Hybrid**.
- Created **Build** and **Continuous Integration** pipelines for Functional and Performance testing and added **automated notifications** for **remote** teams.
- Performed **Release** and **Test** Management for **On-Cycle, Off-Cycle** and **Hotfix** releases.
- Expertise in manual and automated testing **Back-End** services using **SOAP/Restful API**.
- Monitored, Reported and Triaged Applications and Microservice in production using various **Monitoring** tools.
- Proven excellence **on site** or in **remote** work. (Linked In can be provided on request with several references from co-workers across several companies around the United States of America)

Technical Skills:

Methodologies and Testing Techniques	Software Testing Life Cycle, Software Development Life Cycle, Agile, Waterfall, SCRUM, Behavior driven, Test driven, Data driven, Hybrid, Unit, Integration, System Integration, Contract, Component, End to End.
Programing Languages	Javascript, Java, Groovy, Python, C#, HTML, CSS, SQL, Gherkin
Monitoring tools	Visual VM, Splunk, Dynatrace, DataDog

Development environments and Platforms	AWS, Azure, IntelliJ, Eclipse, Visual Studio, Mac, Windows and Linux
Requirement, Defect, Repository and Test Management	JIRA, Testrail, Zephyr Squad, HP ALM, Microsoft Test Manager, Microsoft Team Foundation, Github
Application, Database development and support	Spring Boot, Flask, Falcon, Tornado, Sanic, Gunicorn, NginX, .NET, Hashicorp Vault, Node JS, Gevent, Redis, Active MQ, ZeroMQ, Postgresql, SQLight, Microsoft SQL server, SQS, SNS, SES, Mongo Db.
UML and Documentation	Microsoft Visio, Visme, Lucid Charts, Word, Excel, Google Docs, Confluence
Test Automation Framework and Reporting tools	Selenium, Selenium Grid, Appium, Cypress, Playwright, Browser Stack, Cross Browser Testing(Smart Bear), Pactflow, JMeter, Locust, SoapUI, Postman, NuGet Package Manager, Xamarin UI tests, Extent Reports, Allure Reports, Jasmine and Karma JS, Spock, Mountebank, Behave-python, NUnit Framework, TestNG, Maven, Gradle, JUnit, SpecFlow, Cucumber, Robot Framework, Pabot.
CICD	Jenkins, Cloudbees, Docker.

Education and coursework:

B.B.A – Management

Washburn University of Topeka – Topeka, KS, 66604, United States

Coursework includes Organizational Behavior, Economics, Marketing, Finance, and Information Technology management.

Member of Sales Club, Entrepreneurs Society, CEO club.

Professional Experience:

Randel Solutions - Techhive.

Client: Generali, KS, United States - December 2024 - Till date

Senior SDET, QA lead, Incident Management

Project: Partner integrations for AirBnB, Expedia, VRBO, CSA etc.

DXC Luxoft

Client: Toppan Merrill - December 2023 - December 2024

Test Automation Architect

Responsibilities:

- Performed duties as a **Liaison** across several **QA** teams introducing best practices for Automation.
- Introduced and maintained **Cypress Cucumber Behaviour driven** test automation for the new Mountainview Web application.

- Introduced Automation for **Zephyr** test management tool.
- Improved teams' test case management metrics and created **JIRA dashboards** to show automation progress across teams.
- Improved automation pipelines in **Jenkins** to be more robust and reusable across different teams.
- Investigated and exposed application and web service flaws using transaction searches and logs in **Azure** portal.
- Introduced efficient **Mochawesome** test reports for teams to use across the board.
- Contributed to **Development** by fixing **defects** reported from Automation to increase efficiency of the team.
- Performed test development using **Javascript** and **Typescript**.
- Created utilities using **Python** for erasing test data from the environments.
- Introduced an **Api** test framework using Mocha and **Superagent** that has reusable capabilities with the **Cypress** framework to have a more maintainable test framework across teams.
- Performed several **technical interviews** for QA and Automation candidates prior to client onboarding.

Sinnemar UGTCC, Kuwait - November 2023 – December 2023

Project Manager, UX designer, Backend developer(Freelancer until Project completion)

Responsibilities:

- Created end to end **portfolio UI application** for the company using **Html, CSS, Javascript**
- Created backend application to support the front end using **Python Flask**.
- Created **unit tests** for the application using **pytest BDD**.
- Hosted the application as **Devops** in **Heroku**.
- Setup **domain** and linked the application host using **Cloudflare**.
- Setup **Google maps, web crawlers and SEO** for the website to appear in Google web searches when the company is searched using **Google console**.
- Aided as a **one man IT business consultancy** in a cost effective manner saving the company massive costs to set up their portfolio website on <https://sinnemar.ugtcc.com> . Currently open in Kuwait and US.

Randel Solutions

Client: Generali, CO, United States - September 2022 – October 2023

Project Manager, Scrum master, SDET

Project: Partner integrations for AirBnB, Expedia, VRBO, CSA etc.

Responsibilities:

- Created and maintained weekly **test plan** and **test cases** for migration from legacy to modern **micro-service** architecture.
- Efficiently managed Team deliverables in **Jira**, maintaining **Jira backlog** items across multiple teams.
- Performed as a **liaison** between **Vice President of Engineering**, **Product owner** and Team on the progress of in flight, planned and unplanned requirements.

- Engaged as a **Scrum master**, with an impact of a **cultural shift in the team**, impacting the efficiency in time spent in **stand ups, grooming, planning** and **retrospectives**.
- Managed projects improving the health of existing Applications and Microservice.
- Managed Migration of microservices from AWS **Elastic beanstalk** to **ECS** for cost savings.
- Managed the migration of Security efforts such as moving unsafe credential practices to safer practices such as unexposed use of AWS **SQS, SNS communications** via **EC2** credentials rather than Environment variables.
- While adhering to Project manager, Scrum master roles, also was a single **QA/automation and performance engineer** for a **Data archive project** that would significantly improve database performance in Production for **Microservices** and **Stand alone applications**.
- Reverse engineered **Microsoft SQL** database to find relations and provide team comparisons of financial data between legacy and new issuance process.
- Developed automation using **Robot framework** and **Python**.
- Introduced **Jenkins** pipeline and **Docker** mechanism for automation execution.
- Triageed bugs in **Spring boot** microservices through Error traces.
- Created multiple **Jenkins** pipelines for QA to leverage for automation.
- Created, maintained and executed load tests using **Jmeter**.
- Created and Maintained **Postman** collections and created innovative utilities to read databases without having to leave Postman.
- Used Azure Data studio/Microsoft SQL Server to create complex SQL queries to identify and resolve data issues in preproduction and production.
- Suggested Release branching strategies using Bitbucket.
- Created **Unit tests** within the repo in **Spring boot test framework** using **Mockito** to mock other downstream systems.
- Use **Testrail** to maintain test cases for User stories from **Jira**.
- Queried logs and created dashboards for microservices using **DataDog**.
- Created **Python** scripts to retrieve and manipulate data in **Generali** specific user requested formats.

Randel Solutions

Client: Allstate-SquareTrade, CO, United States - March 2018 – September 2022

Test and Performance Architect, QA Manager/lead

Project: Multi-regioned Merchant Integrations with Walmart, Ebay, Amazon, Media Markt, H3G, T-Mobile

Responsibilities:

- Created and maintained a homegrown **Behavior Driven** Test Framework powered by python using **python-behave**.using **IntelliJ IDE**.
- Developed a python application powered by **Flask** and **Jinja** that enabled Product Owner's, Developers and QA to quickly create warranties, **mock** orders for testing, check pricing updates and drive front-end claims automation by providing a common api to create warranties in **pre-production environments**.
- Primary and lead contributing members of one of the three winning teams in 2018's and 2019's Squaretrade Hack-a-thon competition.
- Tested several User stories and performed defect management using **JIRA** and created and automated test cases for them using **Testrail**.
- Developed CI-CD pipelines in **Jenkins** and **Cloudbees** as **Dev/Test ops**.

- Introduced **Allure** Reports for automated testing.
- Automated **Informatica** Jobs that communicated with external api and **FTP** to obtain and consume orders for automation.
- Created **Mock** Servers using **Mountebank** and **Node JS** to imitate external apis of merchants.
- **Lead the Automation team** and **trained several offshore and onshore teams** to use and contribute to Squaretrade's automation.
- Performed **Release Lead** duties for scheduled and off-cycle releases.
- Performed **QA lead** duties for **on-cycle** and **off-cycle** releases.
- Developed distributed **performance** testing Application/Microservice using **Locust** for routine **Microservice** performance feedback using **cron** jobs.
- Contributed to **Angular** framework's unit/integration level tests using **Jasmine/Karma**.
- Introduced **Bi-directional contract testing** between micro services using **Pactflow**.
- Monitored production applications using **Splunk** and **Dynatrace**, then Identified and performed **Hotfix** on production issues as a developer

Randel Solutions

Client: Project One, CO, United States (Charter Communications, Time Warner Cable, Bright House Networks) - February 2018 – March 2018

QA Automation Engineer

Project: My Spectrum App

Responsibilities:

- Familiarized and coordinated with manual testers to understand the **Front-end** functionality of the new application under test that provided access to customers across a new merger.
- Spent time familiarizing with the **back-end** services for **API** level understanding using **Postman**.
- Spent time understanding the existing **Xamarin UI C#** test framework with the automation team.
- Suggested and helped implement a transition of the **Xamarin UI test** framework into an **Appium** framework for test cloud compatibility freedom.
- Closed several **Tasks and User stories** in **JIRA** after thorough manual testing of requirements and test cases in **Testrail**.
- Tested the back-end acceptance criteria on Actions and Page Views by cross-checking **API** level hits that were firmware and OS specific on **Adobe Analytics**.
- Performed a Knowledge Transfer of **Node Js, Appium, WebDriver Agent and UIAutomator** to the Xamarin specific automation team.
- Attended **SCRUM, Grooming, Sprint Planning** and **Stand Up** meetings to understand and discuss progress and improvements in the Sprint.
- **Stashed** and **Committed** code changes with **SourceTree** and **Gitlab** to share across the team.
- Performed **Code Review** of suggestions with the Automation team.
- Created and retested **Defects** that were related and independent to the **User Stories**.

Randel Solutions

Client: Open Technology Solutions, CO, United States - December 2016 – January 2018

QA Automation Lead

Project: BellCo, Bethpage, SECU

Responsibilities:

- Performed Manual Testing on devices including **Windows, IOS** and **Android** devices for **Browser** applications, **Smart** Applications and **Tablet** Applications.
- Employed **Agile** methodologies to manage automation for **Smoke** and **Regression** testing.
- Set Up and Performed Scripted Automation for Banking Smart applications on Smart devices using **Appium**, and **Selenium .NET Web Driver** in **C#**.
- Helped triage production errors and incidents using complex **splunk** queries, dashboards and **dynatrace**.
- Created Test Scripts using **C#** for Browser automation in **MS Visual Studio**.(Internet explorer, **Google Chrome**, **Firefox**, **Edge** and **Opera**, **Android**, **iOS**).
- Captured bugs and logged them for review in the **Microsoft Team Foundation Server**.
- Communicated with the **Business Analysts** efficiently in order to identify stale and important bugs while adjusting their priorities and severities relevantly.
- Assisted in creating **Test Plans** and developed **Test cases** for **Smoke** and **Regression** tests.
- Worked closely with **developers** to capture the unique **identifiers** of **elements** in the **webpages**.
- Created a **Hybrid** framework for automation which included **Keyword Driven**, **Behavior Driven**, **Data Driven** and **Module Based**.
- Created and presented an **Automation plan** that worked across all the credit union applications.(**Legacy**, **Monitise**, **Alkami**)
- Introduced and set up **Cross Browser Testing** with the assistance of Security and networking to replace a non-functional **Browser Stack**.
