

Vishnu Mohan

Senior Full Stack .NET Developer

Contact: +1 (210) 381-2658

e-Mail: vishnumohan1398@gmail.com

Professional Summary:

- **Senior Full Stack .NET Developer** with 10+ years of experience designing, architecting, and delivering enterprise-grade web applications using **C#, .NET Core, ASP.NET MVC/Web API, Angular, Blazor, SQL Server, and modern cloud technologies.**
- Proven ability to lead complex full-stack initiatives, drive architecture decisions, mentor developers, and ensure high-quality, scalable, and maintainable codebases.
- Experienced in building **microservices, implementing CI/CD pipelines, optimizing databases, and deploying applications** across Azure and hybrid cloud environments.
- Strong collaborator with cross-functional teams, delivering impactful solutions across **healthcare, financial, and public-sector clients**
- Experience in **Designing, Development, and deployment of High-Performance Applications using C#, C++, JAVASCRIPT, JQUERY, XML, HTML, HTML5, CSS, CSS3, Bootstrap, Angular JS, AJAX, SOAP, LINQ, Web Services, WinForms, WCF, WPF, and SQL SERVER** in creating reliable and interactive Web applications.
- Experience in **developing User Interfaces** for several application modules using Kendo UI, developed data models **by Code First Approach** using Entity Framework.
- Hands-on Experience in **Database Design, writing complex Queries, Normalization, Stored Procedures, Indexes, Views, Functions, Triggers and Restore/Backup at the Database level using T-SQL, PL/SQL, maintaining databases, and also experience in Query Optimization.**
- Extensively experienced in **using Build and Automation tools like MS Build, and Maven.**
- Experience in using **Configuration management tools (Version Controllers) like SVN, VSS, and TFS.**
- Proficient in **ServiceNow** design and development, actively contributing to the enhancement and automation of IT service management **processes.**
- Experience building and deploying web applications on **Azure Cloud using Azure app service.**
- Good knowledge of **Microservices, AWS (Amazon Web Services), working with EC2, RDS, Dynamo DB, S3, Cloudwatch, and Docker.**
- Proficient in writing **Technical and Functional test scripts. In test-driven development using N-Unit Testing for the piecewise testing of the Applications.**
- Experience in **Designing, and Development of High-Performance, Scalable, and distributed using Software Development Life Cycle (SDLC) namely Waterfall, Agile, and Scrum.**
- Performed peer code reviews on **GitHub** and took part in **group design discussions.**
- Developed comprehensive **business requirements** and facilitated change management documentation to support the enhancement of services.
- Proficient in **project leadership and mentoring with hands-on experience guiding teams.**

TECHNICAL SKILLS:

Programming Languages	C#(10/8.0/7.3/6.0/5.0), HTML5, CSS3, T-SQL, PL/SQL.
Web Technologies	Full Stack, ASP, ASP.NET Web Forms, VB.net, ASP.NET MVC 5.0/ 4.0/3.0, ASP.NET(.NET 7, .NET 6, .NET 4) AJAX, Javascript, Jquery, React JS, Web Services, and WCF.
Javascript Libraries/Frameworks	Jquery, AngularJs, Angular8, Angular 14.
Responsive Design	Bootstrap, Blazor.
XML Technologies	XML, XSLT, XPATH, and XSL.
Message Format	JSON, XML.
Windows App Technologies	Win Forms, WPF.
IDE Tools	Visual Studio 2022/2019/2017, SQL Server Management Studio, SSIS.
.Net Frameworks	.Net Framework 4.7/4.6.1/4.5, .Net Core 3.0,6.0, .NET 5.0/6.0.

Databases	SQL SERVER 2019/2016/2014/2008,MySQL and MongoDB.
Reporting Tools	SSRS 2014/2008/2005.
Cloud Technologies	Azure, AWS.
VersionControl Tools	SVN, Team Foundation Server(TFS 2015), GIT, and FileNet.
Middleware	Web Services, WCF, ADO.NET, ADO.NET Entity Framework.

Professional Experience:

Role: Senior Full Stack .NET Developer

Client: Smart Financial Inc, Knoxville, TN

Jul 2023 to Present

Responsibilities

- Developed robust web applications utilizing **C#, .NET Core 6, MVC architecture, SQL databases, and API services.**
- Designed and implemented front-end interfaces using **HTML5, CSS, JavaScript, Angular, Blazor, JSON, and Bootstrap.**
- Lead full-stack development using C#, .NET Core 6, MVC, Angular 14, Blazor, delivering scalable and secure financial web applications across multiple platforms.
- Architected and implemented new application modules, REST APIs, and reusable components while ensuring adherence to best practices, coding standards, and long-term maintainability.
- Designed and optimized SQL Server schemas, indexes, and complex stored procedures, improving transaction performance and data retrieval across high-volume workloads.
- Spearheaded CI/CD automation using Azure DevOps, streamlining deployment workflows, build pipelines, and environment configuration across global releases.
- Delivered a cross-platform .NET Core integration for Single-Box deployment, enabling support for Windows, macOS, and Linux and increasing product adoption by 40%.
- Provided technical leadership by reviewing code, guiding junior developers, and ensuring architectural alignment for Angular and .NET Core components.
- Enhanced user experience through responsive UI designs and modern frameworks, ensuring accessibility and performance across devices.
- Built and deployed Azure-based services including Web Apps, Web Jobs, Functions, OAuth integrations, and automated API security flows.
- Collaborated closely with business stakeholders to translate complex requirements into scalable technical solutions supporting long-term product roadmaps.
- Designed and implemented **OAuth-based authentication and authorization** solutions for various pharmaceutical applications and services.
- Developed and maintained secure mechanisms for **OAuth token issuance, validation, and revocation to ensure compliance with industry standards.**
- Communicated **efficiently with non-technical teams and helped** the end client achieve their goals by understanding their requirements and how it **would help them in their business.**

Environment: C#, ASP.NET MVC 5.2, Blazor, Bootstrap, JSON, CSS, SQL, OpenText, HTML, Visual Studio 2022, Azure DevOps, Angular 14, Team Foundation Server (TFS), JSON, NUnit, GitHub.

Role: Senior Full Stack .Net Developer

Client: Banner Health - Phoenix, Arizona

May 2021 to Jun2023

Responsibilities

- Led development of enterprise healthcare applications using ASP.NET Core, C#, MVC, Web API, Razor, React.js, and modern UI libraries.
- Designed and implemented RESTful services, integrating complex business logic with front-end workflows and ensuring seamless communication across distributed systems.

- Built interactive front-end modules with React.js, Angular Patterns, HTML5, CSS3, Bootstrap, improving usability and performance across clinical systems.
- Developed microservices leveraging Docker, Kubernetes, and Azure cloud components including Service Bus, API Gateway, Redis Cache, Service Fabric, and Azure App Services.
- Implemented high-volume, event-driven integrations using Azure Service Bus and Kafka, enabling scalable batch processing and real-time data pipelines.
- Used Entity Framework, LINQ, and T-SQL to design optimized data models, stored procedures, and database operations supporting mission-critical healthcare workflows.
- Conducted code reviews, mentored junior developers, and enforced SOLID principles, improving overall architecture and long-term maintainability
- Defined CI/CD workflows using Jenkins, Maven, Git, and automated testing with XUnit, ensuring stable deployments and continuous integration.
- Collaborated with architects, PMs, QA, and cross-functional teams to deliver secure, compliant, and high-performance healthcare applications.
- Developed and enforced **data governance policies and procedures within .NET** applications to ensure data integrity, security, and compliance with regulatory requirements.
- Ensure that each support request owned is handled as per the **Service Level Agreement (SLA)** and to the highest possible customer **satisfaction** by setting the right expectations and **fulfilling the commitments**.

Environment: C#, ASP.NET MVC, HTML5, JQuery, Telerik, CSS, Bootstrap, JavaScript, React, REST API, T-SQL, Razor, .NET Core, XUnit, Swagger, Adobe, Azure, TFS, GIT.

Role: Full Stack .Net Developer

Client: State Street Corporation - Boston, Massachusetts

Nov 2019 to Apr 2021

Responsibilities

- Experience in **Client-side web development utilizing HTML, CSS3, Bootstrap, Blazor, Angular8, Typescript.**
- Extensively worked on the **.NET Data Grid controls to display** user information.
- Experience in creating configuration files to deploy the SSIS packages across all environments.
- Developed and maintained interactive and visually appealing reports using **SQL Server Reporting Services (SSRS)** in conjunction with **.NET technologies such as ASP.NET, C#, and VB.NET.**
- Orchestrated **CI/CD pipelines on AWS** using services such as Code Pipeline, Code Build, and Code Deploy to automate software delivery processes, streamline deployments, and ensure rapid iteration and release of applications.
- Designed large numbers of **WPF (Windows presentation foundation) Forms, Custom Controls, and User Controls** using **XML language for UI.**
- Developed the web pages using **Asp.net, HTML, and CSS for styling the Web pages.**
- Developed ServiceNow workflows, business **rules, and UI policies tailored to specific** business requirements, resulting in increased efficiency and automation **of IT operations.**
- Used SOAPUI for functional **testing/debugging the** web services and used **WCF Services for establishing** connections between application layers.
- Designed, developed, and maintained web applications using the **.NET Core framework.**
- Performed Server migration using cloud servers like **AWS from physical to a cloud environment by using various AWS features like EC2, S3, Auto scaling, RDS, ELB, EBS, IAM, and Route 53 for installing, configuring, deploying, and troubleshooting on various Amazon images.**
- Integrated OAuth with existing identity and access management systems to enhance security and streamline user access across pharmaceutical systems.
- Developed the modules using **Asp.Net, C#.Net, HTML5, CSS3, Java Script, Master Pages, Ajax, and Web Server Controls** and used **jQuery** for client-side validations.
- **Utilized Kubernetes and Docker for the runtime environment of the CI/CD system to build, test deploy the AWS server.**

- Worked with agile software development methodology to implement continuous delivery and an efficient development **process of the application**.
- Used **RAZOR view engine** to generate Views/ Pages.
- **Developed a single-page application with multiple views using Angular 8 for dynamic user experience and utilized Node.js for backend services.**
- Developed a **Service-Oriented Architecture (SOA) platform utilizing WCF services** for seamless communication between **application modules**.
- Developed and optimized Oracle databases, including schema design, indexing strategies, and query optimization to ensure efficient data management and retrieval.
- Implemented **Oracle PL/SQL procedures**, functions, and packages to **support application functionality** and enhance database performance.
- Utilized **Oracle SQL Developer** for database development, management, and troubleshooting.
- Used microservices to scale the **components of the web application independently** without having to scale the entire application.
- Used **TDD (Test Driven Development) approach to implement clean separation** of concerns and higher testability.
- Used **dependency injection to lay out reusable code**.
- Ensured all applications adhered to **HIPAA security standards**, including data encryption and secure authentication, to safeguard sensitive data handled by the police department.
- Worked with project managers, business analysts, and **QA teams to gather requirements** and deliver HIPAA-compliant software **solutions tailored to the needs of the police department**.
- Involved in the **maintenance and testing of the application**.
- Responsible for **bug fixing, data fixes**, and troubleshooting the technical problems of the application.
- Utilized **RedHat OpenShift Container Platform for deploying**, managing, and scaling microservices-based applications, ensuring high **availability and efficient resource utilization**.
- Created use cases for certain **scenarios of the application using Enterprise Architect**.

Environment: ASP.Net Core, C#.Net, Web API, TFS, TypeScript, AJAX, Oracle Database, Node.js, Razor, Angular JS,HTML5, CSS3, Bootstrap, AWS, TDD.

Role: .Net Full Stack Developer

Client: Happiest Minds - Piscataway, New Jersey

August 2015 to Oct 2019

Responsibilities:

- Developed **ASP.NET MVC application using MVC Layout with Entity Framework**.
- Used **Node.js, Angular 4, backbone.js, and Require.js MVC Frameworks** in the development of web applications.
- Responsible for making **AJAX Calls for the UI Interactions to the Controller Actions using JQuery, getting the Data back as JSON, and parsing it onto the UI**.
- Worked with **Angular 4 to build UI components** for developing single-page applications (SPAs).
- Responsible for designing and developing the **Business Layer Component using C#**.
- Responsible for **developing the Data Access Layer (Model) using ADO.Net Entity Framework Model, LINQ to Entities**, and C#.
- Utilized **Angular 4 new directives** like ng-If and Else, ng-template conditions.
- Involved in developing applications using **Angular 4- Bootstraps like Grids, Toolbars, Panels, Combo-Box Button** etc.
- Utilize **LINQ to Entities for interacting with data in Entity Framework**.
- Written the **SQL Queries, Stored Procedures, Functions, and Triggers in T-SQL, and PL-SQL**.
- Developed Complex Stored Procedures and triggers using T-SQL and used accordingly.
- Used **Angular JS as the development framework** to build a single-page application.
- Used **TFS (Team Foundation Server)** for the maintenance and status of the developers for the development of an application.
- Performed source and **version control using TFS**.
- Used MS Build for application **build, used Jenkins for continuous Integration (CI)**.

- Worked in **SQL** database Optimization and implemented the Performance tuning steps on the data Retrieval Queries.
- Involved in **changes to WCF, and Web Services, to handle** requests from **the POS server and responded** with the required information by **getting the information from the Database.**
- **Performed Unit Testing on the modules according to the requirements** and development standards.
- Prepared **test cases and performed** unit testing using NUnit Framework.
- Extensively experienced in using **Build and Automation tools like MS Build, and Maven.**
- Involved in the **full lifecycle** of the **project from design, development & Testing.**

Environment: Microsoft Visual Studio.NET, ASP.Net, MVC, WCF, Angular 4, Team Foundation Server (TFS), GitHub, MS Build, Jenkins, Node.js, HTML5, JQuery, LINQ, NUnit, WPF, Entity Framework.

Role: .Net Developer

Client: Zensar Tech, Hyderabad, India

Jan 2013 to Dec 2014

Responsibilities:

- Developed forms using **ASP.NET 3.5 Membership, Role Management and Login/Security controls for the login,** create account, change password, password retrieval functionality.
- Developed **ASP.NET** web pages using **AJAX** for better end-user experience.
- Used **Master Pages for consistent Layout** and ease of maintenance.
- Designed enterprise application using **MVC.**
- Executed and performed server system operations and support consisting of Windows 2003, SQL 2000 and 2005, IIS 6.0.7.0 and Exchange 2003.
- Used Telerik **RAD** controls for rich User Interface.
- Used extensive styling in **CSS** to control the style and layout of multiple pages.
- Developed Tuition **Pay Plan Web Service.** This web service provides plan information and associated budget information based on the incoming SOAP request.
- Developed Account Web Service **inC .NET . This** Web Service is used to create new Tuition Pay account for the new customer and also for updating the existing account information.
- Extensively worked in Business Logic Layer for creating class factories and class managers in C .NET. The calls to the Web Services are implemented in these factories.
- Developed interface classes **inC .NET .** These interface classes implement contract between the presentation layer and the business **logic** layer.
- Extensively **used Infragistics** controls for rich **GUI.**
- Developed **enterprise** level Data **Access Layer usingADO.NET objects.** This class is responsible performing database operations in SQL Server database.
- Provided support to the application in the production environment and responsible for resolving the productions issues.
- Performed **Unit Testing using N-Unit 2.2.8.**
- Visual Source Safe for version control and integration.
- Created Sequence diagrams **and Class diagrams using Enterprise Architect 6.1.**

Environment: .NET framework 3.5, Visual Studio 2008, SQL Server 2008, WCF, SOAP, ADO.NET, C .NET, AJAX, XML, XAML, WPF, CSS, Enterprise Architect 6.1, VSS, TFS, Infragistics, Telerik, MVC.
