TECHNICAL SKILLS

405-337-8713 | nick.mitchell.ap@gmail.com

Languages: Javascript, Typescript, Java, Python, Golang, C#, PHP, HTML5, SCSS/CSS, SQL

Frameworks & Libraries: React, Next.js, Vue.js, Node.js, Express.js, Jest, Playwright, Chakra UI, Bootstrap, Tailwind CSS

Databases & Data Processing: MySQL, PostgreSQL, Snowflake, BigQuery, Redshift, Apache Kafka, Apache Spark, Apache Flink, Parquet

Tools & Platforms: Git, Docker, AWS (EC2, S3, Lambda), Figma, Zapier, Integromat

Concepts & Practices: Real-Time Event Processing, Microservices Architecture, Domain-Driven Design, API Design, Data Governance, Observability (Metrics, Tracing, SLOs), Enterprise Security (RBAC, Audit Logging), Distributed Systems, Machine Learning Integration

13+ YRS of WORK EXPERIENCE

Staff Software Engineer- Full Stack | [Amplitude](#)

Nov 2018 - Present

*Directed the **system architecture** of Amplitude's real-time analytics and experimentation platform, scaling the event pipeline and computation engine to handle trillions of events and power customer insights at enterprise scale.*

- Architected the **real-time event ingestion pipeline**, handling billions of daily events with strict ordering, deduplication, and sub-second latency guarantees.
- Defined the data processing architecture using **Kafka** and **Flink**, enabling real-time segmentation, retention analysis, and journey exploration at scale.
- Drove the design of Amplitude's **multi-tenant analytics computation engine**, optimizing storage with Parquet/columnar formats and vectorized execution for 10x faster queries.
- Partnered with data science teams to embed machine learning predictions (churn, conversion likelihood) directly into the analytics pipeline.
- Served as **architecture owner** for Amplitude Experiment, unifying analytics and feature flagging to support statistically rigorous A/B testing.
- Led integration initiatives with cloud data warehouses (**Snowflake, BigQuery, Redshift**), enabling hybrid analytics and unlocking enterprise adoption.
- Established data governance and schema validation systems, ensuring high-quality event tracking across SDKs and customer platforms.
- Guided a company-wide transition toward **domain-driven design** and **service decomposition**, improving long-term scalability and engineering velocity.
- Acted as a key advisor to leadership on system trade-offs for growth vs. reliability, directly influencing Amplitude's technical roadmap.
- Developed interactive, responsive dashboards using React and TypeScript, enhancing user experience for **real-time analytics visualization** and customer insights.
- Collaborated with design teams in Figma to implement **pixel-perfect, accessible UI components** with Chakra UI and Tailwind CSS, improving frontend performance by 30%.

- *Technologies: Java, Scala, React, TypeScript, Kafka, Spark, Flink, Snowflake, AWS (EC2, S3, Lambda), Amplitude SDKs, Chakra UI, Tailwind CSS, Figma*

Senior Software Engineer | [Airtable](#)

May 2014 - Oct 2018

Served as lead architect for the next-generation real-time collaboration engine and relational data backend, a core platform project that redefined Airtable's scalability, reliability, and enterprise readiness.

- Defined the overall system architecture for **Airtable's collaboration engine**, enabling millions of concurrent users to co-edit data with sub-second synchronization guarantees.
- Led technical design reviews and guided teams through a multi-year **re-architecture** from monolith to event-driven microservices, providing fault isolation and faster deploy cycles.
- Partnered with database engineers to redesign **indexing, partitioning, and caching strategies**, supporting extremely large workspaces without performance degradation.
- Established API **design standards** and governed the evolution of Airtable's public API, unlocking an ecosystem of 1000+ partner integrations.
- Drove **enterprise security architecture**, introducing fine-grained permissioning, role-based access control, and audit logging required by Fortune 500 clients.
- Championed **observability architecture** across the platform, standardizing metrics, distributed tracing, and SLO-driven alerting, improving MTTR by 25%.
- Mentored and guided cross-functional engineering groups on distributed systems, database scaling, and data consistency tradeoffs, shaping Airtable's technical roadmap.
- Partnered with product and leadership to align system design with the company's move upmarket into enterprise collaboration software.
- Built dynamic, real-time frontend interfaces using React and TypeScript, enabling seamless user collaboration and data visualization for millions of users.
- Optimized frontend performance with lazy loading and state management in Vue.js, reducing initial load times by 40% for large-scale workspaces.
- *Technologies: Node.js, Express.js, PostgreSQL, React, TypeScript, AWS (EC2, S3), Zapier/Integromat, AI/ML-powered features.*

EDUCATION & CERTIFICATIONS

National University of Singapore

2009 - 2014

Bachelor's Degree in Computer Science

[AWS Certified Cloud Practitioner](#)

[Linux Foundation Certified Systems Administrator](#)
