

Priyanshu Rastogi

Software Engineer | (347) 509-5795 | priyanshunyc25@gmail.com | Jersey City, NJ | [LinkedIn](#)

SUMMARY

Software Engineer with 5+ years of experience in designing, developing, and deploying scalable applications and data-driven solutions across healthcare and enterprise domains. Skilled in Python, SQL, and cloud platforms (AWS, GCP, Azure) with expertise in building microservices, APIs, and machine learning pipelines. Proven track record in system design, distributed systems, and process automation, improving application performance and delivering measurable business impact. Adept at collaborating in Agile teams to design solutions that are robust, secure, and production-ready.

SKILLS

- **Programming & Software Engineering:** Python, SQL, Java (basic), OOP, Data Structures & Algorithms, Design Patterns (MVC, Singleton)
- **System Design & Architecture:** Microservices, RESTful APIs, Distributed Systems, Scalability, Fault Tolerance, Caching & Messaging (Redis, Kafka)
- **Data & ML Tools:** Pandas, NumPy, TensorFlow, PyTorch, Scikit-learn, Hugging Face, LangChain
- **Cloud & DevOps:** AWS (Lambda, EC2, S3, SageMaker), GCP (BigQuery, Dataflow), Azure (Data Factory, Synapse), Docker, Kubernetes
- **CI/CD & Automation:** Jenkins, GitHub Actions, Terraform (IaC), Airflow (ETL orchestration)
- **Databases:** PostgreSQL, MySQL, MongoDB, Snowflake
- **Testing & Quality:** Unit Testing (PyTest), Integration Testing, Test Automation
- **BI & Visualization:** Power BI, Tableau, Matplotlib, Seaborn
- **Collaboration:** Agile/Scrum, JIRA, Cross-functional Teamwork

EDUCATION

- Masters Degree, Pace University, New York

CERTIFICATIONS

- AWS Certified Developer – Associate

EXPERIENCE

Elevance Health, USA

Jul 2024 – Current

Software Engineer (Python/ML Applications)

- Designed and implemented Python-based microservices to process healthcare claims data, reducing API response times by 20%.
- Built ETL workflows in Airflow to extract and process large-scale patient datasets, integrating with Snowflake for reporting.
- Developed RESTful APIs for predictive analytics services, enabling real-time insights for healthcare providers.
- Applied machine learning models (classification, regression, NLP) using TensorFlow and PyTorch to improve fraud detection accuracy by 30%.
- Automated regulatory compliance reporting using SQL queries and Python scripts, reducing manual effort by 40%.
- Collaborated with cross-functional teams in Agile sprints to deliver software solutions aligned with HIPAA and data security standards.
- Implemented unit testing and integration testing frameworks, improving code reliability and reducing defects in production.
- Deployed applications on AWS (Lambda, S3, SageMaker) with CI/CD pipelines through Jenkins and GitHub Actions.

Infosys, IND

Aug 2018 – Dec 2022

Software Engineer

- Designed scalable backend services for a financial client using Python and SQL, optimizing data retrieval performance by 25%.
- Developed data pipelines in GCP (BigQuery, Dataflow) to handle large transaction datasets and automate reconciliation processes.
- Created interactive dashboards in Tableau and Power BI to track KPIs and financial performance metrics for stakeholders.
- Built and deployed containerized applications with Docker and Kubernetes, ensuring high availability across environments.
- Collaborated with architects to design distributed systems with caching (Redis) and messaging (Kafka) for high-volume transaction processing.
- Participated in Agile ceremonies (sprint planning, retrospectives) and contributed to backlog grooming for product enhancements.
- Wrote unit and integration test cases to strengthen application reliability.
- Supported migration of legacy applications to Azure Data Factory and Synapse, streamlining enterprise reporting.
