

SIDNEY SMITH OTEGGEWO OSOJOH EBOT

CLOUD ARCHITECT / DEVOPS ENGINEER

13926 Lullaby Road, Germantown, MD 20874 • +1 (220) 465 3579 • ebotsidneysmith@gmail.com

Professional Summary

With 5+ years of experience in the IT industry, primarily as an AWS Solutions Architect, I possess comprehensive expertise in various AWS services including EC2, VPC (NAT, VPN, IAM), Elastic Beanstalk, Lambda, S3, CloudFront, RDS, DynamoDB, Elastic Cache, Route 53, CloudWatch, CloudFormation, SNS, SQS, and more. Proficient in analyzing and resolving complex problems, with proven leadership, organizational, and management abilities.

With a rich skillset in Terraform, AWS, I excel in creating robust, secure, scalable and cost-effective cloud infrastructures that enhance business agility. My expertise extends to implementing automation, auto-scaling, and load balancing strategies that ensure high availability, fault-tolerance and efficiency in the cloud. I am proficient in orchestrating containerized applications with Elastic Kubernetes Service (EKS), Docker, managing identity and access through IAM, and streamlining development workflows with CI/CD principles using Jenkins, GitLab and GitHub. My troubleshooting acumen ensures swift resolution of complex issues, minimizing downtime and maintaining stringent security standards. I am an enthusiastic learner and I keep growing and open to new things.

Skills

- **AWS (Cloud Technology):** EC2, VPC, S3, IAM, SQS, SNS, Cloud Watch, EBS, EFS, Elastic Load Balancer, Auto Scaling, RDS, DynamoDB, AWS CLI, CloudFront, Cloud Formation, Route53, Glacier, Amazon Aurora, AWS Organizations, Cross Account Access, Consolidated Billing, VPC Peering and AWS Organizations.
- **Containerization:** Docker and orchestration with ECS or EKS (Kubernetes)
- **DevOps Tools:** Docker, Kubernetes, Jenkins, Prometheus – Grafana, Git, Kafka.
- **Technical skills:** C#, C++, Linux, Scala, Basic SQL, Basic Java, Flask, React, MySQL, Pandas, NumPy.
- **Infrastructure as Code (IaC):** Cloud Formation, Terraform, Ansible
- **Automation and CI/CD:** Jenkins, GitLab CI, CircleCI, GitHub Action, AWS CodePipeline.
- **Monitoring and Logging:** CloudWatch, CloudTrail, Prometheus, Grafana, ELK Stack
- **Networking:** VPC Design, Subnets, NAT Gateway, VPN, Direct Connect, Load Balancing, Security Groups, NACLs, Route Tables
- **Security and Compliance:** IAM policies and roles, Secret Manager, GuardDuty
- **Scripting Languages:** Bash Scripting, Python, PowerShell
- **IDE:** IntelliJ IDEA, PyCharm
- **Text Editors:** Sublime Text, VS Code
- **Microsoft:** Azure, Microsoft Office Suite, MS Visio
- Jira
- Agile / Scrum
- Project Management

Experience

AWS Cloud Architect, 01/2023 to Current

Hughes Network Systems – Germantown, MD

- Designed multi-tier architecture to setup infrastructure in AWS for web server, DB server, load balancers & Route53
- Designed fault tolerant, scalable and robust architecture after collecting the requirements from the stakeholders
- Created user accounts, policies and roles on Amazon Web Services using IAM
- Migrated data from on-premise SQL Server to AWS RDS using Data migration service
- Created a lambda function to read the logs from Code Build and ingest logs in Log DNA tool
- Created YAML template to spin the infrastructure (VPC, EC2, RDS, Security Groups) using AWS CloudFormation
- Identify access issues and assign required policies to IAM users and roles
- Created S3 bucket policy to enable cross account bucket access and generated JSON policies using policy generator tool
- Led teams to architect, design, develop and implement cloud solutions (Amazon web services) encompassing multiple specializations, platforms and technologies.
- Designed and deployed a full CI/CD pipeline on AWS using CodePipeline, CodeBuild, and S3 to host a static website, with a trigger for automatic updates on code commits

AWS Cloud Engineer, 10/2020 to 01/2023

Hughes Network Systems – Germantown, MD

- Designed, configured and deployed Amazon Web Services (AWS) for applications utilizing the AWS stack (Including EC2, Route53, S3, RDS, Cloud Formation, Cloud Watch, SQS, IAM)
- Cost and performance monitoring of resources and applications using AWS Cloud Watch and configured notifications for the alarms generated based on events defined
- Created user accounts, policies and roles on Amazon Web Services using IAM
- Migrated data from on-premise SQL Server to AWS RDS using Data migration service
- Prepared an architecture and deployed network infrastructure within VPC with public and private subnets, configure routing tables, security group and internet gateway.

Electronic Engineering Technician, 03/2020 to 08/2020

State Of Ohio – Columbus, OH

- Upgraded the Multi-Agency Radio Communication System (MARCS) from Motorola radios to more user-friendly Kenwood radios.
- Installed, serviced, diagnosed, calibrated, and repaired MARCS mobile and two-way radio systems.
- Performed preventive maintenance to ensure optimal functioning of communication equipment.
- Supported the Bureau of Health Preparedness (BHP) in maintaining communication readiness.
- Ensured reliable, state-of-the-art wireless digital communications for Ohio's first responders and public safety providers.
- Promoted interoperability to enhance operational efficiency and save lives during both routine and emergency situations.

Project

Project-1: DB Migration

- Successfully migrated large-scale database to cloud platform with minimal downtime and data loss.
- Collaborated with cross-functional teams to develop migration plan and optimize performance.
- Implemented robust testing strategies to ensure data integrity and consistency.

Project-2: CloudFormation

- Designed and implemented infrastructure-as-code using AWS CloudFormation.
- Created templates for rapid deployment of complex applications.
- Enforced best practices for reliable and scalable infrastructure provisioning.

Project-3: LogDNA

- Implemented centralized logging solution for efficient log management and analysis.
- Developed custom log ingestion pipelines for diverse data sources.
- Integrated LogDNA with monitoring tools for proactive issue resolve.

Project 4: Automated CI/CD Pipeline with AWS CodePipeline, CodeBuild, and CodeDeploy

- Built and deployed a fully automated CI/CD pipeline on AWS using CodePipeline, CodeBuild, and CodeDeploy, enabling zero-touch deployments from GitHub to EC2 and reducing manual intervention across build and release processes.
- Set up a cloud-based development environment using Amazon EC2, installed Maven and Amazon Corretto 8, and configured secured GitHub integration, enabling version-controlled web app deployments with rollback capabilities.
- Integrated infrastructure as Code by provisioning resources using AWS CloudFormation templates, improving scalability, reproducibility, and environment consistency throughout the deployment lifecycle.

Certifications

- Professional Scrum Master (PSM 1)
- Certified Scrum Master (CSM) – Scrum Alliance
- AWS Certified Solutions Architect

Education

Bachelor of Science: Electrical and Electronic Engineering, 2016

Fontys University of Applied Sciences - Eindhoven, Netherlands
