

Roger Nguyen

Senior Software Engineer

(682) 900-2314 | rogernguyen369@gmail.com | Fort Worth, TX

SUMMARY

Senior Software Engineer with **8+** years of experience across startups and enterprises, skilled in the full-stack development lifecycle. Proven leader of Agile teams, driving end-to-end, customer-facing technical solutions. Hands-on expert in cross-functional collaboration, system architecture, and delivering scalable, customer-focused software in fast-paced environments

SKILLS

React (Next.js) • React Native • Angular • TypeScript • Node • Python • Go • AWS

EXPERIENCE

Senior Software Engineer

Nov 2021 - Present

Robinhood

Engineered Robinhood **Crypto trading** products, shaping the development of trading infrastructure supporting 20+ cryptocurrencies and fraud detection systems, enabling real-time trading across global financial markets

- Led the redevelopment of Robinhood Crypto trading dashboard components using **React** and **Next.js**, optimizing performance for millions of active users across web and mobile platforms
- Enabled real-time price updates and seamless trading flows for Stablecoin features, leveraging **SSR/ISR**, advanced rendering techniques, and integrating **GraphQL/RESTful APIs**, and **WebSockets** to optimize data fetching and ensure responsive, **high-traffic UIs**
- Designed and implemented interactive, high-performance financial data visualizations for the Robinhood Crypto trading platform using **D3.js** and **React**, enabling users to explore real-time trends in price fluctuations, trading volume, and market performance through dynamic, responsive charts
- Constructed core trading services using **Python** and **Node.js**, building event-driven microservices with **Kafka** and **Redis** to ensure scalable and efficient transaction processing in Robinhood's high-volume crypto trading infrastructure
- Built **Go-based** orchestration for **high-concurrency** workflows, supporting 10K+ concurrent orders/sec, reducing transaction latency by 25% while maintaining fault-tolerant, low-latency order execution across the platform
- Integrated AI-powered fraud detection and identity verification systems using **Python** and developed internal **LLM-powered** agent tools for support and compliance teams, enhancing transaction security, streamlining onboarding, and improving regulatory compliance
- Mentored a team of 8 junior engineers, driving best practices through code reviews, design discussions, and knowledge-sharing sessions, fostering a collaborative and high-performance development environment

EXPERIENCE

Software Engineer

Sep 2017 - Oct 2021

TEKsystems

Contributed and played a key role for **6+ early-stage** and **high-growth startups** along with several direct clients by delivering full-stack, cloud-native solutions across fintech, SaaS, healthcare, and e-commerce

- Implemented **React** and **Angular** frontends, creating dynamic, real-time dashboards with SSR/SSG for optimized SEO and faster load times. Implemented infinite scroll, data-heavy visualizations, and microfrontend architecture, ensuring high performance, scalability, and responsiveness across devices
- Developed **Node.js** backend services, designing scalable APIs and integrating payment systems, supporting high-traffic requests with low-latency responses for real-time data processing
- Coordinated a **Python** backend for building robust, secure microservices, enabling seamless data processing, fraud detection, and real-time analytics with a focus on scalability and efficiency
- Automated the deployment of secure, scalable, and cost-efficient microservices in a cloud-native environment using **AWS** infrastructure, **Docker**, and **Kubernetes**, ensuring seamless orchestration, automated deployments, and optimization for scalability, fault tolerance, and high availability, reducing deployment time by 30% and improving system uptime by 25%
- Engineered a hybrid data architecture using **PostgreSQL** and **AWS DynamoDB**, optimizing for high availability with advanced indexing, query optimization, and shadowing strategies, reducing query latency by 40% and improving data access speed by 30% at scale
- Maintained CI/CD pipelines using **CircleCI** and **GitHub Actions**, automating testing and deployment processes, while integrating **Datadog** and **Prometheus** for real-time monitoring, boosting system uptime and cutting resolution times

EDUCATION

Texas Christian University

Aug 2013 - May 2017

Bachelor of Science in Computer Science
