

PERCIO CASTRO

INTEGRATION ARCHITECT | SOFTWARE ENGINEER | TEAM LEADER
937.969.0686 | percio@nibl.tech | Beavercreek, OH, USA | <https://linkedin.com/in/percio>

SUMMARY

Percio Castro is a leader and a specialist in the application integration space with over 20 years of experience. His expertise spans domains such as software development, enterprise architecture, application integration, cloud enablement, containerization, service-oriented architecture, and business process automation. Throughout his career, he has played many roles, often in parallel, including analyst, developer, architect, mentor, sales engineer, and executive. Percio possesses a unique skill as he can bridge the gap between technical and non-technical teams. He can break down complex business requirements into simple yet robust technical solutions, while also being able to communicate complex technological concepts to non-technical team members. This ability coupled with his excellent communication skills and an innate talent for solving challenging problems have led to a proven track record of delivering lasting solutions for the companies he has served, including corporations like Genentech, Disney and Sony, and governmental agencies like the Department of Defense and Department of Labor.

EDUCATION AND CERTIFICATION

B.S. in Computer Science | Magna Cum Laude | University of Dayton 2002

TECHNICAL SKILLS

Concepts	Publish Subscribe Messaging Pattern (Pub-Sub), Service Oriented Architecture (SOA), Enterprise Service Bus (ESB), Canonical Data Modeling, Continuous Integration (CI), Continuous Delivery (CD), DevOps, API Management, Test-Driven Development (TDD), Contract-first Development, Service Virtualization, Business Process Management (BPM), Containerization
Coding	Java, JavaScript, SQL, Groovy, C, C++, COBOL, Bash, PowerShell, Ant
Integration Platforms	Vitria BusinessWare, webMethods, MuleSoft AnyPoint, Informatica Cloud
Database Servers	SQL*Server, Oracle, MySQL, Postgres
ERP	SAP, Oracle Apps
Cloud Technologies	AWS EC2, Secrets Manager, SQS, S3; Google Cloud Pub/Sub, BigQuery; Informatica CAI and CDI
Collaboration Tools	GitHub, Gitlab, Bitbucket, Subversion, TFS; Confluence, Jira, Trello, MS Teams; Smartsheet; Google Docs; Office 365
Observability	Grafana, Tempo, Loki, Elastic, Splunk, AppDynamics, DataDog, NewRelic
Standards, Protocols & Specs	ANSI X12, cXML, EDI, xCBL, XML, HTML, HTTP(S), SSL, TLS, JMS, SOAP, REST, Swagger, Open API, RAML, WSDL, LDAP, XML Schema, JSON Schema
Tools	Docker, Postman, SoapUI, Jenkins, Eclipse, VS Code, IntelliJ, Cursor
Languages	English, Portuguese

WORK EXPERIENCE

Co-founder and Consultant | Nibble Technologies

2016 – Present

- Led large cross-functional teams comprised of customer and contracted personnel in the architecture, design, development, and deployment of robust API's and integrations using platforms like webMethods (a Java based-application integration platform), Google Cloud, and Amazon Web Services.
- Built custom, configuration-driven, innovative solutions to reduce delivery time of integrations, such as Disney's Enterprise Data Hub Bridge, an application that enabled the delivery of 110+ integrations in record time.
- Created a Java application, and accompanying API, that enabled the customer to digitally sign any JSON object, adding authenticity, integrity, and non-repudiation to hundreds of JSON-based configurations.
- Integrated ERP systems such as SAP to cloud platforms like AWS and Google Cloud.
- Migrated webMethods integrations to Informatica Cloud Data Integration and Cloud Application Integration.
- Modernized and automated the customer's SDLC via containerization and implementation of CI/CD pipelines.
- Increased observability for customers' applications via the adoption of OpenTelemetry.
- Participated in the ideation, design, development, and sales of advanced Java-based software, like Nibble Technologies' Otelscope and Nanoscope, helping customers increase the ROI in their middleware platform.
- Established partnerships with software vendors like Software AG, IBM, and Salesforce, and nurtured an active network of highly qualified consultants.

Customers included Disney, Centers for Medicare and Medicaid Services, Department of Labor, Standard Chartered Bank, Johnson & Johnson, Do It Best, and Software AG, to name a few.

Founder and Consultant | OrderOne Solutions

2014 – 2016

- Served as a Technical Team Lead across multiple integration projects.
- Automated business processes via an executable BPMN implementation leveraging webMethods BPMS.
- Lowered execution time of key business processes and increased visibility to key performance indicators ensuring the optimal execution of the customer's business processes and near perfect SLA compliance.
- Architected system components to ensure maximum availability and scalability of webMethods applications within the customer's licensing constraints by using a combination of active-active and active-passive clusters for webMethods applications like the API Gateway, Integration Server, and Universal Messaging.
- Implemented Continuous Integration for webMethods artifacts leveraging tools like Jenkins and SoapUI.

Customers included Standard Register (now Taylor Communications), Archway Marketing Services, and Do It Best.

Manager of Intelligent Business Operations Consulting Team | Software AG

2013 - 2014

- Led Software AG customers in the architecture and implementation of Software AG products.
- Participated in numerous pre-sales activities, such as delivering product demos and answering RFP's.
- Managed Software AG's Intelligent Business Operations (IBO) consulting team, a team comprised of eight of Software AG's top consultants, responsible for implementing Software AG's emerging technologies at the time: big data analytics, complex event processing, high speed messaging, among others.
- Provided mentorship to IBO team members and created their individual career growth paths via training and certification targets and goals that were aligned with the company's business objectives.

Customers included Standard Register (now Taylor Communications), USTRANSCOM, and Air Mobility Command.

Senior Principal Consultant | Software AG

2008 - 2013

- Acted as a lead consultant in the implementation of Software AG's products across multiple projects, often playing roles like analyst, architect, developer, and liaison between the customer and Software AG.
- Advanced Agile development methodologies internally and externally via innovative architecture recommendations and step-by-step tutorials promoting concepts like Test-driven Development, Contract-first Development, Continuous Integration, Continuous Delivery and Deployment, and Build Once Deploy Many.
- Selected for Software AG's Architect Program, a program that gathered the top global consultants and engineers in the company for in-depth training and discussions on topics ranging from the Java Virtual Machine's internal architecture to TOGAF, The Open Group Architecture Framework.

Customers included National City Mortgage, Genentech, GREIF, Cintas, Infarmed, Sony, DLA Transaction Services, USAID, among others.

Senior Software Engineer | Standard Register

2006 - 2008

- Lead integration developer responsible for the design and development of multiple EAI and B2B integrations between Standard Register's complex internal applications and its vast trading partner network.
- Acted as the lead integration developer in the implementation and integration of Manhattan's Warehouse Management Open Systems with Standard Register's internal inventory systems.
- Onboarded Standard Register external trading partners, like customers and vendors, via modern XML-based integrations done directly with the partner or via a network like Ariba or Coupa.
- Established webMethods development coding guidelines and design best practices.
- Led the implementation of a version control and deployment strategy for the webMethods platform ensuring higher quality and reliability of the solutions being delivered.
- Acted as a liaison between the development and support organizations by helping establish standard procedures and documentation around technical design, code review, and deployment events.

Senior Developer | The Relizon Company

2001 - 2006

- Developed and maintained EDI integrations on the spEDI*tran platform supporting several ANSI X12-based transactions.
- Supported Relizon's legacy integrations built on Vitria BusinessWare.
- Participated in a software selection committee to choose Relizon's integration platform among vendors like Vitria, Tibco, and webMethods, in which webMethods was selected.
- Helped implement all new integrations on the webMethods platform, including B2B integrations with partners and suppliers via webMethods Trading Networks and EAI integrations with internal systems, such as integrations between the front-end web-ordering system and several back-end fulfillment systems.
- Played a key, leading role in major integration projects, including integrations between Oracle Apps ERP and TeleScope, a Digital Asset Management solution from North Plains
- As a Java developer, developed numerous features for Relizon's J2EE web-ordering system, Relizonline.

Intern | Reynolds & Reynolds

1999 - 2001

- Monitored the health of automated a replication across 80 Computer Associates Ingres II databases, which often required manual intervention via complex SQL queries.
- Implemented and supported several EDI mappings for ANSI X12 transactions like 850, 810, 997, among several others.
