

ABDUL VILAITHI SHAIK

Location: Purcellville, Virginia | Mobile: +1 (571) 564-8867 | Email: abdulvilaithi2705@gmail.com

LinkedIn www.linkedin.com/in/abdul-shaik-924b98355

PROFESSIONAL SUMMARY:

- **Around 10** years of Experience in dealing with all phases of Validation Life Cycle like Design, **SAT, FAT, Commissioning**, Qualification (**IQ, OQ, PQ for equipment**), Process and Cleaning Validation and Requalification.
- Expertise in drafting the following validation deliverables like Validation Plans, **URS, DS, FS, Qualification Protocols**, Validation reports, **IQ/OQ/PQ** test scripts, Deviation/Incident Reports, Summary Reports and Change Controls (Veeva vault & Trackwise).
- **SCADA** systems continuously collect and log data for analysis, trend analysis, and troubleshooting.
- Extensive experience in performing **21 CFR Part 11** Gap Analysis, Risk Analysis and developing Remediation Plans.
- Operated and maintained HPLC systems for the analysis of pharmaceutical products, ensuring compliance with regulatory standards.
- Experience in Qualification of **Manufacturing Equipment** (Autoclaves, Isolators, Lyophilizer, VHP, Filler, Capper, Tunnel, Oven), **Packaging Equipment** (Visual Inspection, Denester, Labeler, Check weigher, Palletizer, Cartoner and Serialization) and **Automation Systems** (Rockwell MES, SCADA, PLC, HMI, Thin Client)/.
- Experience in the development of Process Validation protocols for new products, products being transferred to the site, internal product transfers and process changes.
- Experience in coordinating the validation activities with departments like Chemical Quality, Technical services, manufacturing/solution formulation and Quality Assurance.
- Experienced in writing test cases for filling homogeneity, fill volume testing, stability testing, Bacterial Endotoxin and Bioburden testing.
- Experience in defining sampling plans and design experiments to establish the best challenge conditions for qualification.
- Experience with Qualification of **Lyophilizer**, Autoclave, Formulation Tanks, **Depyrogenation** Oven, **CTUs** like incubator and refrigerator.
- Performance Qualification of Finishing Line using 2mL and 5mL vials.
- **Data integrity** testing for recipes, audit trails and alarm reports.
- Experience in verification of data backup, time synchronization to SNTP network, Active Directory implementation for access levels, security testing, **PLC** and **HMI**, and Disaster recovery testing.
- Experience with drafting exception reports, identifying corrective actions, summary reports, line templates, batch records, work instructions/structured on the job training, and **SOPs**.
- Experience in using **Electronic Document Management Systems**.
- Excellent working knowledge and grasp of Data Integrity guidelines – **MHRA** and **FDA's GMP Data Integrity** definitions and guidelines including **ALCOA++** framework – Attributable, Legible, Contemporaneous, Original and Accurate.
- Profound knowledge of Computer Software systems including **LIMS, Kaye Software**, Waters Empower applications and Experience in Software Testing Methodologies.
- Experience in proper scheduling and managing timelines for different projects, coordinating with Manufacturing, maintenance, automation SMEs for protocol execution.
- Experience in timeline driven management.
- Experience in demonstrating self-directional initiations in meeting deadlines.

TECHNICAL SKILLS:

- **Electronic Data Systems** – LIMS, SAP, Veeva Vault, eQMS, Kaye Validator, Empower, ServiceNow.
- Validation plan, Compliance Risk Profile, GAMP5, **Protocols** (IQ, OQ, PQ), GxP (GLP, GCP, GMP), Gap Analysis, Summary Reports, Audit Trials, LIMS, SOX, Share Point, AERS
- **Lab Equipment:** Centrifuge, Water Bath, Incubator, Glasswasher, Karl Fisher, Colony Counter, Plate Reader and Refrigerator, DeltaV+ Rockwell/Allen- Bradley PLC experience.

- **Change Management:** ServiceNow, Track wise 8, Cherwell
- **Test Management Tools:** HP ALM Quality Center, Jira, Waterfall, V-Model and Agile-
- **MS-Suite:** MS Office (Word, Excel, Power point, Access), MS Visio, MS Project, SharePoint and Outlook
- **Validation:** FDA Quality system regulations, 21 CFR Part 11, 210, 211, 50, 820, Test Plan, URS, FRS, SOP's, CAPA, RTM.Aseptic/Sterile pharmaceutical manufacturing.
- **Writing validation** strategy for packaging equipment like URS, FDS, IOQ.
- **Legacy equipment** like Dividella, Cartoner

PROFESSIONAL EXPERIENCE:

Client: Pfizer, Rocky Mount, NC

Mar 2023 to Present

Role: Validation Engineer

Responsibilities:

- Commissioned and qualified **10+** finishing equipments, including Denester, Inspection Machine, Labeler, Heat Shrinkage Tunnel, Cartoner, Literature Inserter, Check Weigher, Case Packer, and Palletizer, with a focus on **LIMS**, **SCADA**, and **PLC/HMI** qualification.
- Authored End-to-End Test cases for Validating Allen Bradley PLC and SCADA Application, and authored **IQ** and **OQ, PQ** to verify Control Panel, Loop Checks, Remote I/O, and Electrical Drawings.
- Enhanced **SCADA functionality** to monitor and track system performance over time, enabling predictive maintenance, improving operational efficiency by **15%**, and optimizing long-term system performance.
- Designed and implemented frameworks and procedures for maintaining data accuracy and integrity throughout the data lifecycle, from ingestion to analysis.
- Developed and validated **HPLC** methods for the quantification of active ingredients and impurities in drug formulations, reducing detection time by **30%**.
- Conducted comprehensive testing encompassing I/O checks, **calibration checks**, **PMs**, **HMI** security verification, recipe management, parameter boundaries, alarm testing, forced eject functional verification, container sorting and counter verification, report accuracy, audit trail, disaster recovery, label printing, wrap quality, and vial spin verification.
- Developed and implemented robust Test Method Validation (**TMV**) protocols for various mechanical, electrical, and preclinical tests in compliance with industry standards.
- Hands on Experience in Software Development Life Cycle (**SDLC**), familiar with Waterfall, V-shape model and Agile model.
- Executed Performance Qualification for 2 mL Glass Vials (Amber and Flint), challenging the entire finishing line representing routine conditions for commercial production lots (sample size: 800) using **AQL** criteria for critical, major, and minor defects.
- Drafted and reviewed **validation packages** and **summary reports**, ensuring accuracy, completeness, and compliance with regulatory requirements.
- Completed **Requirements Traceability Matrices** to ensure alignment between user requirements, design specifications, and validation activities.
- Managed projects involving **GAMP5** categorization, adhering to their respective deliverables for Computer Systems Validation lifecycle.
- Proficient in Production Equipment, Facilities Clean Room Qualification, and Utilities such as WFI and **HVAC** systems.
- Conducted Alarm Assessments to **categorize alarms** (Direct, Indirect alarms, and notifications) and developed/revised standard operating procedures (SOP), Preventive Maintenance, and criticality classification of instruments which improve system uptime by **10%**.
- Demonstrated experience with Emerson **DeltaV**, including a full understanding of its structure and navigation.

Client: Regeneron, Washington D.C

Feb 2020 to Mar 2023

Role: Validation Engineer

Responsibilities:

- Prepared and executed Validation and **Installation Qualification (IQ)**, **Operational Qualification (OQ)**, **Performance Qualification (PQ)** for process equipment's such as autoclaves, mixers, Bioreactors, Tanks, and Lyophilizers in compliance with cGMP and FDA regulations.
- Performed temperature mapping and temperature monitoring studies using **Kaye validator**, thermocouples, and data loggers for equipment like refrigerators, freezers, autoclaves, incubators, and isolators.
- Prepare and calibrate thermocouples to perform a qualification protocol for a warm room and cold box temperature distribution with different loads.
- Led the upgrade of control systems by commissioning and validating a new Allen Bradley PLC and Control Systems, developing documentation for **Allen Bradley PLC**, SCADA, building automation, and system integrations.
- Responsible for initiating, implementing, and completing change control, deviations, investigations, impact/risk assessments, root cause analysis and **CAPAs**.
- Initiated Hold time studies for equipment to establish time limits at different stages of production.
- Wrote and reviewed the system related SOPs, Batch records and Analytical methods to ensure compliance of company's processes, policies, and procedures.
- Determination of critical process parameters, equipment specifications and technical support for development, validation, and manufacturing activities.
- Generate **validation/qualification protocols** (including Process, Packaging, Cleaning Validation, and Installation, Operational, and Performance Qualification protocols) and rationales for design of the study, sample collection, and the development of acceptance criteria for a variety of products, processes, facilities/ utilities, and equipment.
- Independently developed and executed the **I, O and P** qualification protocols for the commercial **CTU** (Controlled Temperature Unit) -30°C and -20°C freezers, ultra-low temperature freezers (-86°C), stability environmental chamber, and cold room (2-8°C) temperature mapping.
- Calibrated analytical laboratory equipment such as HPLC and GC for accuracy detection limits, noise level, precision, reproducibility, repeatability, and robustness.
- Expertise in Process Validation, Test Method Validation (**TMV**), Protocol/Report Writing, Statistical Analysis, CAPAs, Design Verification, and Equipment qualifications.
- Authored, reviewed, and approved Validation Master Plan (**VMP**), validation documents including Equipment Qualification Assessment (**EQA**), Trace Matrix (**TM**), Installation and Operational Qualification (**IOQ**), and Performance Qualification (**PQ**).
- Authored, reviewed and approved Data Integrity Assessment (DIA) and Part 11 and Annex Assessment to comply with **GAMP 5** regulations.
- Supported interpretation and implementation of quality standards.
- Investigated and authored deviations, root cause analysis and Corrective and Preventive Actions (**CAPA's**)
- Reviewed User Requirement Specifications (**URS**), Design Qualifications (DQ), site acceptance testing (**SAT**), Functional acceptance testing (**FAT**), design documents.
- Performed and reviewed Equipment Supplier Quality Assessment (**ESQA**).

Client: Fresenius Kabi, North Carolina

Jun 2016 to Feb 2020

Role: Validation Engineer

Responsibilities:

- Provided daily production support to set up, trouble shoot, repair, and monitor manufacturing assembly, packaging & amp; vacuum drying related processes & amp; equipment.
- Performed IQ/OQ/PQ on equipment and fixtures as well as executed validations on Manufacturing lines (**PPQ**).
- Assisted product development in quality control procedures, development of test protocols for new equipment procurements (IQ/OQ/PQ), and introducing best practices to manufacturing.
- Supported the introduction of new products into manufacturing. Review engineering designs and conduct engineering change orders documentation for completeness, clarity and manufacturability.
- Wrote SOP (standard operating procedure) using equipment manuals and executing protocols.
- Developed all necessary processes and audit documentation (i.e. **FMEAs Control Plans, Capability Studies, Balanced Line Capacity Models, Flow Analysis**, etc.)
- Used Six Sigma tools for process capability studies, statistical process control determination, measurement systems analysis, and development of process controls systems
- Performed qualification and validation activities according to site master plan

- Reviewed validation (**IQ/OQ/PQ/PPQ/TMV**) and provided technical input to ensure validation reports were qualified to company and regulatory requirements.
- Developing, reviewing and updating inspection plans for new material in **SAP** as per AQL.
- Conducted Process Failure Mode Effects Analysis (**PFMEA**) to identify and evaluate potential process failures in design/assembly of Medical Devices. Executing Hazard Analysis in a risk management plan.
- Developed, maintained, and improved manufacturing processes using pFMEA as a guide.
- Provided support with **BOM** (Bill of Materials) and routings validation. Perform studies as required to ensure standard time and standard cost accuracy in our SAP MRP system.

Client: Gland Pharma Ltd India

Jun 2015 to Aug 2016

Role: Validation Engineer

Responsibilities:

- Led Performance Qualification of various critical manufacturing equipment, ensuring **operational excellence**.
- Developed comprehensive Clean-in-place (**CIP**) and Sterilization-in-place (**SIP**) cycles, enhancing equipment sanitation and compliance.
- **Spearheaded** Installation Qualification (IQ), Operational Qualification (OQ), and Performance Qualification (PQ) of automated CIP skids, ensuring efficient cleaning of diverse equipment.
- Managed qualification of **Grade C and D** facilities, conducting IQ, OQ, and PQ for essential equipment and systems.
- Conducted rigorous temperature mapping, calibration, and biological indicator studies, ensuring process reliability and regulatory compliance.
- Drafted SOPs and supported **QA audits** to uphold regulatory standards and operational efficiency.
- Provided expert support in validation protocols for diverse processing and **R&D** lab equipment, utilities, and facilities.
- Involved in authoring and executing temperature mapping protocols for Refrigerators, incubators, Freezers, bioreactors.
- Prepared equipment/utility systems for qualification studies and executed according to approved protocols and SOPs.
- Authored and executed procedures, IQ, and PQs of equipment like autoclave and other CTU's.
- Performed qualifications for utilities like WFI, **HVAC** systems, and pure steam.
- Involved in commissioning, qualification, and validation of laboratory and analytical equipment like HPLC, GC, **FTIR**, **TOC Analyzer**, Airborne and **Liquid-borne Particle Counters**, **Lyophilizer**, Microplate Readers, Plate washers, and Spectrophotometers.
- Developed and validated cleaning validation for tanks, lyophilizer, washers, fermenters, Bins, etc.
- Analyzed the manufacturing process and the design, assembly & maintenance of various extruder machines.
- Performed Six Sigma (**DMAIC**) process, Root cause analysis, Problem-solving, and cost analysis along with statistical studies using Minitab.

EDUCATIONAL EXPERIENCE:

DOCTOR OF PHARMACY -

JNTUH, India.
