

ADISH SHAH

Boston, MA | (857) 891-9705 | shah.adis@northeastern.edu | [LinkedIn](#) |

Passionate Network engineer and tech enthusiast fueled by relentless innovation and technology. Possess **1.5+ years of hands-on experience** across **20+ projects**, specializing in **network protocols** and **infrastructure automation tools**. A **team player**, **problem solver**, and **leader** with strong communication and persuasion skills, capable of delivering scalable, secure, and high-performance network solutions. Seeking a **full-time role starting April 2025** to continue driving innovation and shaping impactful tech solutions.

Education

M.S. in Computer Systems Networking and Telecommunications | Northeastern University, Boston, MA (**GPA: 3.63/4**) **Expected April 2025**
Course work: Data Networking, Internet Protocols and Architecture, Infrastructure Automation, Linux for Network Engineers, Network Security

Technical Skills

Programming:	Python, Bash Scripting, Shell Scripting
Networking Protocols:	Routers, Switches, BGP, OSPF, EIGRP, HTTP, HTTPS, STP, TCP/IP, DNS, DHCP, HSRP, MPLS, FTP, SFTP, SNMP
Wireless Networking :	WLAN, IEEE 802.11 standards, Wi-Fi Roaming, Aruba AP, Gateway, Aruba Central, Radius, Active Directory
Network Security :	Cisco ASA, FTD, FMC, Access Control, NAT, IPS, IDS, TLS, VPN, IPsec, Splunk, troubleshooting
Automation Tools:	Ansible, Puppet, Docker, Terraform
Software Tool:	CPT Tool, EVE, GNS3, Microsoft Office 365, GPO
Operating Systems & Cloud :	Ubuntu Linux/Unix, Windows, MacOS, VMware, AWS

Experience

Bharti Airtel Limited Network Engineer Intern(Global)	Kolhapur, India May 2024 – Sept 2024
--	--

- Resolved **over 50** complex routing and switching issues involving **BGP, OSPF, STP, and HSRP** to enhance network redundancy and ensure continuous and reliable service delivery, achieving **80% uptime**
- Configured and maintained Cisco routers, switches, next-generation firewalls, and ISE to uphold precise network documentation and deliver seamless connectivity for a network supporting over **10,000 users**
- Developed automation scripts that optimized infrastructure monitoring, improved operational efficiency by **30%**, and enabled proactive identification of bottlenecks for faster resolution
- Resolved **200+** customer issues with a 90% first-call resolution rate and managed **network backups** across 50+ critical devices, cutting recovery time by **40%** and supporting over **100** network changes for improved reliability

Omkar Communication Broadband Engineer	Kolhapur, India Jan 2022 – Dec 2022
---	---

- Engineered and deployed a **40-mile GPON fiber-optic network** for Airtel Xstream broadband during the COVID-19 pandemic, leveraging **Ekahau tools** to create heat maps and design a robust network topology for seamless **OLT, ODU, and ONT** integration
- Orchestrated the installation of **350 Fiber Access Terminal (FAT) boxes** across **150+** residential and commercial properties. Delivered high-speed internet to over 1,500 households, meeting a **90% surge** in demand
- Utilized **DWDM technology** to enhance broadband bandwidth and performed **1,000+** fiber splicing operations, resolving faults within **2 hours** using the **OTDR** tool to maintain consistent network performance from OLT to ONT
- Contributed significantly to the **Airtel Xstream Broadband** rollout, delivering the project within strict deadlines and achieving a **15% reduction** in costs through resource optimization and efficient deployment strategies

Academic Projects

Automated Deployment of Scalable Web Infrastructure on AWS

- Automated deployment of **VPCs, subnets, ELBs, and Auto-Scaling Groups** using Terraform, enabling scalable infrastructure to handle over 1 million monthly requests. Dockerized applications to achieve seamless scaling across availability zones.
- Automated** AMI creation workflows with **Packer** and **Ansible**, accelerating deployment efficiency by 50% and ensuring consistent EC2 instance provisioning across multiple availability zones with reduced manual errors
- Implemented **RBAC** with Terraform-managed IAM roles, configured dynamic Auto-Scaling (**70% scale-up, 40% scale-down**) and integrated CloudWatch, ensuring security, cost optimization, and response times under 200ms during peak traffic

Multi-Site Network Infrastructure for Startup Expansion

- Developed multi-location network topology using **Cisco Packet Tracer**, configuring routers and switches with **OSPF** for seamless inter-AS communication and improved connectivity
- Configured IP/subnet schemes, **DNS, HSRP, and Access Control Lists (ACLs)** to streamline resource allocation, achieving an 80% improvement in network performance, failover capabilities, and access control
- Deployed **VLANs** and **Dynamic ARP Inspection** across 250+ devices to boost security and traffic management. Optimized network resilience by configuring **PVST, Portfast, BPDU Guard** and securing remote administrative access with SSH
