

AJIMOL P THANKAPPAN

SENIOR SOFTWARE ENGINEER - EXPERIENCE OF 10 YEARS

804 585 4263

ajimolpt@gmail.com

Carmel, IN 46033

Professional Summary

- Senior Java Developer with 10 years of experience in designing, developing, and delivering scalable web and enterprise applications using Core Java, J2EE, Spring, and Apache Kafka.
- Proven track record in developing and integrating complex systems for banking, telecom, and education domains.
- Skilled in collaborating with cross-functional teams to define project requirements, propose solutions, and deliver high-quality software products.
- Extensive experience in Agile methodologies, including Scrum and Kanban, with a proven ability to collaborate effectively within cross-functional teams, deliver iterative solutions, and adapt to dynamic project requirements.
- Expertise in architecting solutions, defining performance strategies, and optimizing system capabilities for better user experiences.
- Strong knowledge of database, integration, and management using MySQL, and Oracle.
- Comprehensive experience in development lifecycle activities, including requirement analysis, solution design, coding, unit testing, and deployment.
- Adept in utilizing modern technologies like Docker, Kafka, and distributed systems to build real-time, high-performance applications.
- Passionate about enhancing organizational efficiency through technology and delivering solutions aligned with business objectives and customer needs.
- Proficient in mentoring teams, facilitating Scrum ceremonies, and driving technical innovation in fast-paced environments.

Employment History

2017

til 2019

Commonwealth Bank of Australia (CBA) (Via TATA Consultancy Services),
Senior Software Engineer/Assistant Consultant, *Cochin, Kerala, India*

2012 – 2017: **Ericsson (via TATA Consultancy Services),**
Senior Developer / Technical Architect, *Hyderabad, Telangana, India*

2008 – 2012: **Transversal e Networks (UST Group),**
Software Engineer, *Trivandrum, Kerala, India*

Professional Competencies

- Real-time Data Processing
- Database Migration & Optimization
- E-learning Platform Development
- Agile Project Management
- Team Leadership
- System Integration
- Solution Architecture
- Stakeholder Communication
- Technology Stack Expertise
- Multilingual Solution Design
- Cross-functional Collaboration
- Technical Documentation
- Performance Optimization
- Risk Analysis & Mitigation
- Product Ownership
- Mentoring & Skill Development

Technical & Program Proficiencies

Software Engineering: JAVA/J2EE, Spring, JUnit, Mockito, Kafka, Docker

Cloud: AWS

Database: MYQL, Oracle, PostgreSQL

DevOps: Jenkins, BitBucket, Git, Docker, SVN, Splunk Log Analysis

Project Management: Scrum, Agile, Waterfall, Lean, JIRA, Confluence

Education

Mar Baselios College— *Peermade, Kerala, India*
Mahatma Gandhi University,
Institute of Engineering and Technology
B.Tech Electronics and communications
(2003-2007)

Project Experience

May 2017 - Aug 2019

Commonwealth Bank of Australia

Project : *Customer Correspondence*

Role: Senior Developer

Domain: Banking

Languages, Libraries, Frameworks: Core Java/J2EE, Kafka, Javascript, Docker , Spring

- Work with Solution Architects and DBAs to analyse and build real-time data pipelines between the systems or applications.
- Write efficient, high-performance Java code to consume, process and write streams of records using Java/ Apache Kafka APIs.
- Containerize stream processing applications using Docker and deploy them
- Unit testing using mocking tools and API test utilities to simulate streaming environments.
- Manage code bases/versions of different development environments
- Debug production issues and resolve bottlenecks in real-time processing pipelines
- Collaborate with DevOps, QA, and Data Engineering teams for seamless application deployment and integration

Jan 2017 - April 2017

Ericsson

Project : ENM – Ericsson Network Manager

Role: SME/Technical Architect

Domain: Telecom

Languages, Libraries, Frameworks: Java, Versant ODBMS , PostgreSQL

- Understand the Source and Target Systems and Gain a deep understanding of the existing Versant ODBMS schema, data model, and usage patterns.
- Analyze the target PostgreSQL environment, including schema design and relational principles.
- Develop a Migration Strategy and Plan the migration process, including phases for analysis, data mapping, conversion, testing, and deployment.
- Identify dependencies, risks, and challenges, including those related to data type mismatches, relationships, and object-to-relational mapping.
- Establish timelines, resource requirements, and milestones.
- Work with all Stakeholders including developers, database administrators, and other stakeholders to gather requirements and ensure alignment.
- Document the migration plan and ensure all stakeholders are informed of the process.

Dec 2012 - Dec 2017

Ericsson

Project : *OSS RC - SHM, IPCM*

Role: Senior developer/ Technical lead

Domain: Telocom

Languages, Libraries, Frameworks: Core JAVA

- Designing, develop, maintain and optimize software solutions for managing and monitoring telecom networks for Ericsson OSS-RC (Operations Support System Radio & Core)
- Work closely with customers and stakeholders to gather requirements, provide updates, and address concerns.
- Implement functionalities related to IP Configuration management(IPCM) and Software/Hardware management(SHM)
- Work with standard telecom protocols like SNMP, FTP and others to enable communication with network elements
- Design, develop, and maintain APIs to facilitate data exchange between OSS-RC and external applications.
- Write unit test cases using Junit/Mockito for IPCM/SHM modules to ensure functionality and reliability.
- Simulate network conditions to test the application
- Collaborate with System architects, Node teams, and product Owners to deliver end-to-end solutions.
- Mentor junior developers, providing technical guidance and sharing domain knowledge.
- Facilitate the Scrum ceremonies
- Own the user stories and regularly update the status of assigned tasks
- Update the issue to indicate blockers or dependencies and notify the relevant stakeholders.
- Actively address comments or questions raised by other team members on JIRA issues.

Jan 2008 - Nov 2011

Transversal e Networks

Project: *TeN iLMS*

Role: Senior developer/ Technical lead/Application Engineer

Domain: Education

Languages, Libraries, Frameworks: Java, J2EE, JavaScript, HTML, CSS3, Mysql/Oracle, Tomcat, Websphere

- Collaborate with stakeholders (e.g.customers, instructional designers) to gather and understand customization and feature requirements.
- Analyze the functional and nonfunctional requirements and document technical specifications for new features or customizations.
- Design scalable, modular, and maintainable solutions for iLMS customizations and new features
- Design or update database schemas to support new features, ensuring optimal performance and data integrity.
- Integrations with third-party tools (e.g., LMS platforms, video conferencing tools, SCORM, or xAPI compliance).
- Integrate third-party services like analytics tools, payment gateways, content repositories, or single sign-on (SSO) solutions.
- Optimize features to handle large-scale user interactions, concurrent sessions, and multimedia content delivery
- On-site deployment the product updates and new features
- Monitor the product post-deployment and address any issues or performance bottlenecks.
