

Ajith V

Senior Java Full Stack Developer

ajithvc14@gmail.com

540-692-6318

<https://www.linkedin.com/in/ajithvemasani141>

Professional Summary

- Senior **Java Full Stack Developer** with **11 years** of experience in building scalable web applications and enterprise solutions. Skilled in front-end and back-end development, microservices, APIs and databases. Experienced in leading projects, enhancing performance and collaborating in agile environments to deliver high-impact software solutions.
- Expertise spanning **Java (6-17)**, **Kotlin** and **Core Java** concepts including multithreading, concurrency and memory management. Proficient in implementing Object-Oriented Programming (OOP) principles across highly scalable, performance-driven applications.
- Extensive experience with **Spring Boot**, **Spring WebFlux**, **Spring Cloud**, **Spring Data**, **Spring Batch**, **Spring Integration**, **Spring Security** and **Spring MVC** for developing robust backend services and microservices. Worked with **Spring JPA** and **Hibernate** and **Spring JDBC** to manage data persistence and transactional workflows.
- Expertise in building user interfaces using **JavaScript**, **TypeScript**, **HTML5**, **CSS3** and popular frameworks like **Bootstrap** and **Material-UI**.
- Experience with modern frontend libraries including **React**, **Angular**, **AngularJS** and **jQuery** with state management tools such as **Redux** and **NgRx**. Familiar with module bundlers like **Webpack**, **Rollup** and **Parcel** for optimizing web performance and loading speeds.
- Proficient in developing **REST APIs** with **JSON**, **SOAP APIs** with **XML** and **GraphQL**. Hands-on experience with API documentation tools such as **Swagger / OpenAPI** and implementing security protocols using **OAuth2** and **JWT**.
- Well-versed in **Microservices Architecture**, **Serverless Architecture** and **Service-Oriented Architecture (SOA)** to design scalable and modular applications.
- Skilled in **Node.js** for building high-performance APIs and scalable backend architectures.
- Experience with messaging tools like **Apache Kafka**, **RabbitMQ**, **ActiveMQ** and **JMS** for distributed systems.
- Proficient in **AWS** and **Azure** with expertise in deploying scalable, serverless applications and managing infrastructure through Terraform and CloudFormation.
- Expertise in CI/CD tools including **Jenkins**, **GitHub Actions**, **CircleCI** and **Bamboo** to automate deployment pipelines. Familiar with containerization and orchestration tools like **Docker** and **Kubernetes** for deploying and managing services.
- Focused on code quality with **JaCoCo**, **SonarQube** and **Checkstyle** for test coverage, static analysis and coding standards.
- Experience with frontend testing tools such as **Karma**, **Jasmine**, **Angular Testing Library**, **React Testing Library**, **Jest**, **Puppeteer** and **Enzyme**. Expertise in backend testing frameworks like **JUnit**, **Selenium**, **Mockito**, **MockMvc** and **Cucumber**.
- Proficient in build tools including **Gradle**, **Maven** and **Ant**, with hands-on experience across IDEs such as **Eclipse**, **IntelliJ IDEA**, **VS Code** and **Apache NetBeans**, ensuring smooth development workflows and optimized builds.
- Proficient in handling relational and NoSQL databases such as **MongoDB**, **Cassandra**, **PostgreSQL**, **Oracle** and **MS SQL Server**.
- Skilled in version control tools such as **GitHub**, **GitLab**, **Bitbucket**, **Git** and **Subversion (SVN)**. Experienced with bug-tracking tools like **Jira**, **Bugzilla** and **GitLab Issues** to manage development workflows effectively.
- Expertise in logging frameworks like **Log4j**, **SLF4J** and **Logback** to monitor application performance and errors.
- Strong documentation and collaboration skills with tools such as **Confluence**, **GitLab Wiki**, **BitBucket Wiki** and **SharePoint**.

Academic Achievements

- Bachelors in Computer Science Engineering.

Accreditations & Training

- AWS Certified Solutions Architect Associate.
- Microsoft Certified: Azure Solutions Architect Expert.

Professional Endeavors

Client: Pinnacle Financial Partners Inc, Nashville, TN
Senior Java Full Stack Developer

Feb 2023 - Present

Project Responsibilities:

- Led **agile** development efforts by applying **Software Development Life Cycle** (SDLC) methodologies from planning and design through deployment, ensuring seamless integration and delivery of high-quality software solutions.
- Developed enterprise applications using **Java V17, V14, Core Java** and **Kotlin**, incorporating advanced features (Records, Pattern Matching, Foreign-Memory API) to improve code efficiency, maintainability and performance. Achieved faster runtime and reduction in code complexity through optimized implementation.
- Built scalable microservices-based solutions with **Spring Boot**, enabling faster development and integration of financial services such as **payment processing, portfolio management** and **risk analysis**, reducing application downtime and accelerating feature delivery.
- Streamlined batch processing workflows using **Spring Batch** and adopted **Spring Cloud** to enhance reliability and scalability in distributed environments, ensuring uptime for mission-critical financial operations like transaction reconciliation and settlement processing.
- Enhanced database performance by optimizing repository interactions with **Spring Data**, improving query execution speed for handling transaction histories, customer records and financial analytics through efficient database abstractions.
- Managed complex ORM operations with **Spring JPA** and **Hibernate**, reducing query time through efficient use of **HQL, CriteriaAPI** and native queries and improving maintainability by streamlining ORM configurations across multiple financial microservices.
- Designed intuitive user interfaces for financial dashboards and client portals using **TypeScript, HTML5, CSS, Bootstrap** and **Material-UI**, delivering consistent, cross-platform user experiences. Developed web applications using **Angular 13** to enhance performance, scalability and user experience in real-time market data analysis tools.
- Developed responsive web applications with **Angular**, utilizing Ivy engine, lazy loading, **NgRx** and **ESBuild** optimizer to improve application load times and reduce memory footprint for financial trading platforms.
- Created secure REST APIs with **JSON, Swagger, OAuth2** and **JWT**, improving API security and usability for financial data exchange systems. Ensured 100% compliance with industry standards through thorough testing with **Postman**.
- Architected scalable microservices solutions using **GraphQL** and **Kong API Gateway**, improving query efficiency and ensuring smooth traffic management during peak loads for real-time financial reporting and transaction management systems.
- Developed backend services using **Node.js** to support asynchronous workflows, enhancing system scalability and responsiveness for high-traffic financial systems like fraud detection and credit scoring platforms.
- Deployed and managed scalable infrastructure on **AWS Cloud**, utilizing **AWS EC2** for compute, **AWS S3** for storage and **AWS DynamoDB** for NoSQL database management, ensuring high availability, disaster recovery and optimized performance while reducing operational costs through effective resource management.
- Established automated **CI/CD pipelines** with **GitLab CI/CD**, reducing deployment time for financial applications. Utilized **Docker** and **Kubernetes** to ensure smooth container orchestration and fault-tolerant service scaling for financial systems.
- Maintained high code quality with **SonarQube**, reducing technical debt and ensuring compliance with industry best practices throughout the development lifecycle of financial solutions.
- Managed builds efficiently with **Maven**, minimizing dependency conflicts and optimizing team productivity through seamless workflows in **VS Code** for financial application development.
- Implemented **RabbitMQ** for asynchronous communication, ensuring reliable message delivery between financial services and achieving zero message loss during production operations on **Apache Tomcat**.
- Used **MongoDB** for NoSQL database storage, ensuring flexibility in data structures and scalability in managing large data sets such as client profiles, financial transactions and real-time analytics. Implemented efficient queries and indexes for optimal performance.
- Performed frontend testing with **Karma** and **Jasmine** to validate UI functionality for financial dashboards and backend testing with **Cucumber** and **Mockito** to ensure service-level reliability and correctness in systems like payment gateways and investment tracking platforms.

- Employed Test driven development practices using **JUnit** and **Mockito**, ensuring robust code quality, early defect detection, and seamless integration of financial microservices.
- Manage version control using **BitBucket**, track project progress and bugs through **Jira**, implement logging with **SLF4J** and maintain comprehensive project documentation with **BitBucket Wiki** for seamless knowledge sharing.

Client: Cigna, Kansas City, MO
Senior Java Full Stack Developer

Dec 2019 - Dec 2022

Project Responsibilities:

- Collaborated in **agile** teams using Scrum and Kanban, managing **Software Development Life Cycle (SDLC)** phases from requirements to production through stand-ups, sprint planning and retrospectives.
- Designed and developed robust enterprise-level applications using **Java 11** and **Core Java**, leveraging features such as var, lambda expressions, streams API, Optional API enhancements and HTTP Client API, ensuring modular code, optimized performance and maintainability across multiple environments.
- Built non-blocking, asynchronous APIs and web services with **Spring WebFlux** to handle high-concurrency scenarios such as processing healthcare claims and real-time insurance eligibility checks, ensuring low-latency performance and improving system scalability.
- Developed microservices and backend logic with **Spring Boot**, ensuring smooth integration with other microservices and external APIs for **health insurance enrollment, claims processing** and **provider networks**, using REST and event-driven designs.
- Implemented data persistence layers with **Spring Data**, simplifying complex database operations and enabling seamless connections to relational databases for member data and NoSQL databases for unstructured health records.
- Managed ORM mappings with **Spring JPA** and **Hibernate**, efficiently handling complex relationships like policyholder-provider mappings, lazy loading and caching strategies for improved performance in insurance claims processing systems.
- Designed and developed responsive frontends for member portals and provider dashboards using **TypeScript, HTML5, CSS3, Bootstrap** and **React 16**, ensuring cross-browser compatibility, accessibility and a dynamic user experience.
- Built scalable SPAs using **React**, leveraging **hooks, context API, React Router** and state management with **Redux**, focusing on component-based architecture and code reusability for applications such as insurance policy management and telehealth platforms.
- Developed and deployed microservices following Microservices Architecture principles. Used **GraphQL** to enable flexible and efficient querying for benefit plans, policy details and claim histories, minimizing over-fetching of data.
- Designed and exposed REST APIs using **JSON payloads**, secured them with **OAuth2** and **JWT** and integrated them with **AWS API Gateway** for managing access to healthcare services. Performed API validation and testing through **Postman** to ensure seamless functionality.
- Incorporated **Node.js** to build lightweight backend services for healthcare appointment scheduling and real-time notifications, managing I/O-heavy operations efficiently and enabling better real-time processing and event handling.
- Leveraged **AWS services** such as **AWS S3** for storing member documents securely, **AWS EC2** for scalable compute needs, **AWS Lambda** for serverless functions handling claims verification and **AWS RDS** for managing relational databases, ensuring high availability and fault tolerance.
- Set up **CI/CD pipelines** with **GitHub Actions**, automating testing, builds and deployments for healthcare applications. Containerized applications using **Docker** for portability and reliability across environments. Orchestrated containers with **Kubernetes** to manage scalability, load balancing and service discovery.
- Ensured high-quality code delivery by implementing **JaCoCo** for code coverage analysis, identifying test gaps and promoting adherence to coding standards through automated checks in health insurance processing systems.
- Utilized **Gradle** for build automation and dependency management, ensuring smooth integration and delivery of healthcare applications. Used **Apache NetBeans IDE** for faster development and debugging, enhancing productivity in insurance workflows.
- Implemented messaging services with **Apache Kafka** to enable asynchronous communication between services, supporting event-driven architecture for claim status updates, policy renewal notifications and provider system updates. Deployed and managed backend systems using **JBoss application servers** for enterprise-level operations.

- Optimized large-scale data handling with **PostgreSQL**, ensuring reliability, enabling complex queries and achieving rapid data retrieval with optimized indexing and partitioning for critical systems like policy databases and claims history repositories.
- Conducted unit and integration testing on the frontend using **Mocha** and **Chai** to validate UI components in insurance dashboards. Executed backend testing using **Cucumber** for **Behavior-Driven Development (BDD)** and **TestNG** for automated regression and performance testing of claims processing workflows.
- Managed version control using **Git** and **GitLab**, following GitFlow practices for branching and merging strategies. Tracked issues, bugs and feature requests with **Jira** to ensure timely delivery.
- Logged application activities and errors using **Log4j**, enabling better troubleshooting and monitoring. Documented workflows and project guidelines in **GitLab Wiki** for easy collaboration and knowledge sharing within the team.

Client: Fifth Third Bancorp, Pittsburgh, PA
Java Full Stack Developer

June 2017 - Nov 2019

Project Responsibilities:

- Collaborated in **agile** development environments to deliver high-quality software in iterative sprints, managing all phases of the **SDLC** such as requirement analysis, design, coding, testing, deployment and maintenance.
- Designed and developed robust backend solutions using **Java 8** and **Core Java**, leveraging streams, lambda expressions, optional, functional interfaces and date/time API, while following object-oriented principles and design patterns for scalable, maintainable code.
- Developed and deployed **microservices**-based applications using **Spring Boot**, enabling seamless integration with APIs for **banking** platforms and improving system reliability for **real-time transaction tracking** and **customer service systems**.
- Utilized **Spring Data** for seamless data integration in loan management systems and account operations, implementing CRUD operations and managing relational data efficiently to support banking transactions and operations.
- Built microservices architectures with **Spring Integration**, while enabling hypermedia-driven RESTful web services using **Spring HATEOAS** to enhance API interactions and discoverability for customer account details, loan APIs and financial product offerings.
- Created responsive, interactive user interfaces for online banking portals and mobile banking apps using **JavaScript**, **HTML5**, **CSS3**, **Bootstrap** and **Angular 2**, focusing on user experience, accessibility and cross-browser compatibility.
- Built reusable **Angular** components and SPAs for customer-facing banking portals using modules, services, directives, RxJS and Angular Router, ensuring efficient state management and smooth navigation for transaction history views and fund transfer workflows.
- Designed **Serverless Architecture solutions** and developed **REST APIs** with **JSON payloads**, implementing secure and scalable API management with **Apigee gateway** to support real-time banking operations and fraud detection systems.
- Used **Node.js** for backend logic, building server-side applications for fund transfer processing and developing middleware services for seamless communication between payment gateways and banking systems.
- Deployed cloud-based solutions on **Azure**, utilizing **Azure Virtual Machines**, **Azure Blob Storage** and **Azure Functions** to manage infrastructure, ensure high availability and maintain scalability and reliability for banking operations.
- Automated build, test and deployment pipelines using **Jenkins**, while containerizing applications with **Docker** and orchestrating them using **Kubernetes** to enable fault-tolerant deployments for high-transaction banking systems.
- Ensured adherence to coding standards and improved code quality through static analysis tools like **Checkstyle**, maintaining high software quality for banking transaction systems and customer management platforms.
- Managed builds efficiently with **Maven**, utilizing **Eclipse IDE** to streamline development, debugging and testing processes for banking web and mobile applications.
- Integrated asynchronous messaging services with **JMS** for efficient communication between distributed systems like loan processing, credit card management and customer notifications. Deployed enterprise applications on **WebSphere** application servers for robust banking operations.
- Managed and optimized **Cassandra** databases for scalability, low-latency performance and fault-tolerant distributed data storage to handle large-scale customer transaction histories, account records and fraud monitoring data.

- Conducted rigorous frontend testing using **Jasmine** and **Karma** to validate UI components for online banking portals and backend load/performance testing using **JMeter** to ensure scalability and reliability under high traffic during banking peak hours and end-of-month
- Used **Git** and **GitHub** for version control and collaborated on code using branching strategies. Managed issue tracking and bug reports with **GitLab Issues**, implemented robust logging with **Logback** and maintained project documentation and knowledge sharing using **Confluence**.

Client: Target, Austin, TX
Java Developer

Dec 2014 - May 2017

Project Responsibilities:

- Spearheaded the development of enterprise-grade applications, following **agile** methodologies and adhering to **SDLC** phases, including requirement analysis, development, testing and deployment.
- Engineered backend services and APIs using **Java7** and **Core Java**, leveraging multi-threading, collections and exception handling to ensure optimal performance and scalability for **retail order processing systems** and **inventory management**.
- Developed dynamic web applications with **Spring MVC**, implementing RESTful endpoints, data validation and efficient controller logic to manage customer interactions, product browsing and business workflows in retail platforms.
- Designed and implemented **RESTful APIs** using **Spring Boot** to facilitate efficient communication between distributed systems, enabling seamless integration for real-time inventory updates, customer orders and payment processing.
- Designed and executed batch processing workflows using **Spring Batch**, automating inventory synchronization, order fulfillment processes and data transformations with job scheduling for retail operations.
- Integrated advanced authentication and role-based access control using **Spring Security**, implementing **OAuth2** and **JWT** for secure API access to protect customer data and ensure compliance with industry standards.
- Developed responsive and cross-browser-compatible frontends for retail websites using **JavaScript**, **HTML5**, **CSS3**, **Bootstrap** and **Angular JS 1.0**, focusing on intuitive user experience and improved page load performance for shopping carts and product catalogs.
- Created and consumed SOAP APIs, leveraging **XML** for structured data communication and integrating with legacy systems and external retail partners, such as payment gateways and supply chain systems.
- Architected microservices and implemented **Service-Oriented Architecture (SOA)** principles to enhance modularity, maintainability and scalability of retail systems like loyalty programs and promotion engines.
- Managed cloud services on **AWS**, utilizing **Amazon S3** for storing product images and customer data and deploying applications on **Amazon EC2 instances** to provide scalable and secure infrastructure for retail platforms.
- Orchestrated Continuous Integration/Continuous Delivery (CI/CD) pipelines using **Bamboo**, automating builds, testing and deployments to streamline development cycles for e-commerce solutions.
- Automated project builds with **Ant** and facilitates asynchronous message-driven communication through **ActiveMQ** to enable seamless interactions between inventory systems, order management and customer notifications.
- Deployed applications to **WebSphere Application Server** and utilized **IntelliJ IDEA** for efficient development with refactoring tools, debugging and code analysis, ensuring smooth delivery of retail applications.
- Managed relational databases using **Oracle**, writing optimized **SQL** queries, indexes and stored procedures to ensure high data performance and integrity for customer records, sales reports and inventory data.
- Collaborated with cross-functional teams using **Git** for version control, tracked and resolved bugs through **Bugzilla** and implemented test automation with **Selenium** to ensure smooth deployments.
- Created and maintained detailed project documentation with **SharePoint** to support knowledge transfer, onboarding and ensure long-term project maintainability.

Client: Render InfoTech, Bangalore, India
Java Developer

Aug 2013 - Sep 2014

Project Responsibilities:

- Designed, developed and maintained high-performance web applications leveraging **Java/J2EE** technologies and **Core Java** principles, with a focus on Object-Oriented Programming (OOP) concepts such as **Polymorphism** and **Encapsulation** to ensure modular and reusable code.
- Built robust and scalable back-end systems by implementing **Spring MVC** architecture, enabling clear separation of concerns, faster debugging and improved code maintainability.
- Integrated enterprise-level authentication and authorization mechanisms using **Spring LDAP**, ensuring secure access control and seamless integration with existing directory services.
- Developed responsive user interfaces using **HTML, CSS, JQuery** and **Ajax** to enhance the user experience with rich, dynamic and interactive components.
- Implemented dynamic web components using **JQuery** for efficient DOM manipulation, event handling and AJAX integration.
- Designed, developed and consumed **SOAP**-based web services for smooth interoperability between systems, with **XML** utilized for data structure and communication across modules.
- Wrote and optimized complex **SQL** queries and procedures using **MS SQL Server** to manage relational databases, ensuring high performance for data retrieval and manipulation operations.
- Implemented CI/CD pipelines with **Jenkins**, automating builds and deployments to reduce time-to-market, with build automation using **Apache Ant** for consistency.
- Managed code versioning and collaboration workflows using **Subversion** (SVN), ensuring effective code management, traceability of changes and smooth team collaboration.
- Collaborated in **agile** development environments, actively participating in sprint planning, backlog grooming, daily stand-ups and retrospectives to ensure incremental software delivery aligned with business objectives.
- Conducted comprehensive unit testing using **JUnit**, developing automated test cases to maintain code reliability, detect regressions early and support **TDD** (Test-Driven Development) practices.
- Performed troubleshooting and debugging across multiple layers of the application to identify and resolve issues promptly, ensuring minimal downtime during production releases.
- Documented technical processes, workflows and APIs, ensuring knowledge sharing and easy onboarding for new team members while maintaining high-quality software documentation.
