EDUCATION

Master of Science in Software Engineering

Jan 2024 - Dec 2025

San Jose State University, San Jose, CA

GPA: 3.11/4.00

Coursework: Enterprise Distributed System, Enterprise Software Platform, Data Mining

Bachelor of Engineering in Computer Engineering

Jul 2019 - Jun 2023

Gujarat Technological University, Gujarat, India

GPA: 8.76/10.00

Coursework: : Data Structures & Algorithms, Software Engineering, Object-Oriented Programming

TECHNICAL SKILLS

Programming/Scripting Languages: Java, Python, C, JavaScript

Frameworks/Libraries/Tech: Spring, Spring Boot, Collection, Swing, Pandas, NumPy

Web Technologies: React, Redux, REST, HTML

Databases: MySQL, MongoDB, PostgreSQL

Cloud: AWS

DevOps: Git, Data Migration, ETL, Postman, JIRA, Agile Methodologies

PROFESSIONAL EXPERIENCE

Software Engineer Intern – Revasyst Pvt. Ltd (India)

Jan 2023 - Mar 2023

Technologies Used: Java, Apache PDFBox, ETL, Informatica PowerCenter, MySQL

- Created a report generation tool using the Apache PDFBox library to automate migration outlines, improving reporting efficiency by 30%, collaborated with team members to ensure seamless completion.
- Leveraged Informatica PowerCenter tool to extract data from MySQL database, transforming it according to customer specifications and loading it into targeted storages with zero errors.

PROJECTS

Distributed Systems: Handling Failures with Replication and Consensus Algorithms

- Developed a solution to resend client requests if no acknowledgment was received when building a key-value storage system to handle network partition, ensuring each command was executed exactly once.
- Synchronized primary and backup servers to prevent data inconsistency when designing a backup server architecture to mitigate the risk of primary server failure, resulting in a 40% reduction in system downtime.
- Incorporated a view server to dynamically track and assign server roles when resolving split-brain issues in a distributed system, addressing the need for role management and improved system stability by 25%.
- Implemented multi-instance Paxos consensus algorithm when facing the challenge of a single point of failure by enabling dynamic leader election to elect primary server and achieved 35% of fault tolerance.
- Integrated a heartbeat mechanism and distributed log system, ensuring system linearizability and garbage collection, which kept all servers in sync and enabled recovery from failures without data inconsistency.

Role-based Learning Management System

- Led backend development using Spring Boot to construct over 15 RESTful APIs, supporting course management, user profiles and admin operations, utilized MySQL to manage and store data for 1,000+ users.
- Evolved a robust role-based access control system, managing permissions for 3 distinct roles and assigning specific access levels, Ensured that each user role had control of only relevant features.
- Collaborated with the frontend development team for integration and hosted the application on AWS EC2.
- Actively participated in sprint planning, daily stand-ups, and cross-functional team collaboration within an Agile development environment.
- Contributed to Agile documentation including burndown charts, deployment diagrams and project artifacts.
