

AKHILESH YALAMANCHILI

669-224-8409

akhilesh.yalamanchili@gmail.com

SUMMARY:

- Over 8 years of IT experience with a major focus on DevOps, Build and Release management involving extensive work in code compilation, packaging, building, debugging, automating, managing, tuning, and deploying code across multiple environments (DEV, QA, UAT, and PROD) for various releases, and designing instance strategies.
- Experience in developing web based, internet/intranet, client/server, distributed architecture and component-oriented architecture applications using Java/J2EE technologies and varied exposure to different types of project phases like Development, Maintenance and Production Support.
- Extensive experience in Automation, Configuring and Deploying instances on Amazon web services AWS including EC2, EBS, S3, ELB, RDS, Aurora, Auto Scaling, S3, Lambda, VPC, Route53, Cloud watch, Cloud trail, Cloud Form, AMI, IAM, Security groups, SNS and Roles.
- Experience in dealing with Virtual Machines, Cloud Services, Resource Groups, Express Route, Traffic Manager, VPN, Load Balancing, Application Gateways, and Auto-Scaling.
- Experience with Ansible and Ansible tower as configuration management tools to automate repetitive tasks, quickly deploy critical applications and proactively manages change.
- Experience with Cloud Formation and Terraform Templates and deployment of AWS resources associated with software release life cycle.
- Experience in implementing Lambda to achieve Auto-Failover for critical applications.
- Strong expertise in implementing CI/CD pipelines to automate deployments using Python & Shell.
- Expertise in automated functional testing using Cucumber-Ruby Scripts and Postman.
- Hands on experience on Terraform a tool for building, changing, and versioning infrastructure safely and efficiently.
- Skilled in creating dashboard using, Datadog, Splunk, NewRelic, PurpleRain.
- Experience working with software development methodologies like Waterfall, Agile.
- Experience in SOAP, REST and expertise in creating Restful Web Services with Spring MVC Framework.
- Applied Agile Test Practices SCRUM, Scripted Test Cases for Test Driven Development TDD and developed test cases for story card based on Acceptance Test Driven Development.
- Proficient in using automation tools such as Selenium and SOAP UI.
- Expertise level knowledge in entire software development lifecycle (SDLC) process from business analysis to development, testing, deployment.
- Experience working on critical high TPS applications and 24/7 on-call support.
- Experienced in analyzing production issues to determine root cause and provide fix recommendations.
- Possess outstanding oral and written communication skills.
- A strong leader and team player, adept at supporting team members to achieve personal and professional goals.

TECHNICAL SKILLS:

AWS Tools	EC2, S3, Cloud Formation, IAM, EBS, ELB, Load Balancing, Auto Scaling, VPC, Route53
GCP	GCE, Storage, Big Query, Big Table, IAM, Cloud SQL, Kubernetes, Data Flow, VPC, GCS, GCR
AZURE	VM's, AAD, Storage, Networks, Monitor, AKS, SAS, SLA, KeyVault, Resource Manager
Web technologies	HTML, CSS, D3.js
Configuration Management Tools	Chef, Ansible, Terraform
Scripting Languages	Python, Shell
CI/CD Tools & DB	Jenkins, Oracle, Cassandra, MySQL
Containerization Tools	Docker, Kubernetes
Application Servers	Tomcat, WebLogic and WebSphere.
Source Control Tools	GIT, SVN
Monitoring Tools	Splunk, DataDog, NewRelic, CloudWatch

PROFESSIONAL EXPERIENCE:

Sr. DevOps Engineer
Capital One – Richmond, VA

July 2022 – Present

Responsibilities:

- Migrated On-premises application and its infrastructure to AWS Cloud platform by gathering requirements for new enhancements.
- Deployed and maintain stacks for 24/7 critical uptime business product offering.
- Wrote automation/self-healing scripts in Python/BASH/ Node.js
- Applied reliability techniques, conducted root cause analysis and implemented Reliability Centered Maintenance.
- Acted as top-tier on-call support to manage alerts on Pager Duty for critical uptime business applications.
- Troubleshoot java applications, client-server software, server architectures and performance bottle necks. Fixed underlying issue caused by incidents and recording its impact, and actions taken to mitigate or resolve it, analyze root cause(s), and make follow-up actions is to prevent incident from recurring
- Played a vital role in automating Barracuda WAF deployments.
- Developed ansible roles and playbooks for server configuration.
- Contributed to the development and maintenance of automation tools used in managing infrastructure.
- Leveraged automation tools like powershell and puppet to decrease deployment times in production reducing downtime.
- Used Terraform to write IAC and created terraform scripts to create EC2s, ELBs and S3.
- Extensively used bash command line, Lvm2 to create, extend, delete partitions in Linux machines, troubleshooting postfix issues.
- Responsible for Installation, Configuration Management, Maintenance and Systems Development of Red Hat Linux, Oracle Enterprise Linux Systems.
- Migrated servers to AWS Fargate.
- Implemented and maintained monitoring solutions to increase visibility of alerts.
- Built S3 buckets and managed policies for S3 buckets while using Glacier for storage and back-up.
- Architected and configured secure cloud VPC using private and public networks through subnets in AWS.
- Initiated alarms in CloudWatch service for monitoring the stacks performance and integrated critical alerts to PagerDuty alerting.
- Achieved level 3 automation for functional testing using Karate.
- Implemented UI automation for various use-cases using Cypress.

DevOps Engineer
United Health Care – Remote

Sep 2021 – June 2022

Responsibilities:

- Conducted current state assessment of infrastructure framework to identify gaps and recommend solutions. Leveraged assessment results to enhance existing framework and designed strategic solutions.
- Extensively involved in designing Azure Resource Manager template and designing custom builds using shell.
- Provisioned ALBs, ASGs and launch configurations for microservices using ansible.
- Created Terraform scripts for EC2 instances, Elastic Load balancers and S3 buckets.
- Managed hosting plans for azure infrastructure, implemented and deployed workloads on Azure virtual machines meeting security requirements.
- Implemented high availability with Azure Classic and Azure Resource Manager.
- Involved in developing Terraform scripts to deploy microservices to azure.
- Contributed to MongoDB data migration to azure.
- Identified prospective issues in azure migration and suggested feasible solutions.
- Architected and implemented public cloud infrastructure in highly distributed environment. Gathered and analyzed market information to formulate migration.
- Involved in shifting workloads between Kubernetes clusters based on Anthos and created monitoring dashboards for both on premise and GKE clusters in stackdriver.
- Used Kubernetes and implemented HPA and federated HPA in Kubernetes clusters.
- Wrote YAML files for creating pods, services, replication controllers and persistence volumes.
- Automated provisioning and repetitive tasks using Terraform and Python, Docker container, Service Orchestration.
- Managed the PIM activities in azure and setup the PIM approvers with limited time to get full access in azure to perform operational activities.
- Created CI/CD pipelines to deploy services to OpenShift and azure.

- Played a key role in migration to public cloud (azure).
- Deployed key resources in azure like VMs, APIMs, Key vault, Kubernetes, subnets.
- Documented azure processes for future teams use.

Cloud DevOps Engineer
Capital One – McLean, VA

Mar 2019 – Sep 2021

Responsibilities:

- Involved in the complete SDLC including the design of System Architecture, development of System Use Cases based on the functional requirements.
- Created fully Automated Jenkins Jobs and CI/CD pipelines to automate deployments.
- Used Docker containers for eliminating a source of friction between development and operations and created and managed a Docker deployment pipeline for custom application images in the cloud using Jenkins.
- Provided architectural guidance to enhance DevOps practices.
- Leveraged Cloud Formation and Terraform to setup dedicated development environments in multiple AWS regions.
- Performed S3 buckets creation, policies and on the IAM role based policies and customizing the JSON template and worked on AWS Ops Work, AWS Lambda, AWS Code Deploy, AWS cloud formation and cloud foundry.
- Utilized AWS Cloud watch to monitor environment for operational & performance metrics during load testing
- Automated functional test cases using cucumber.
- Implemented best practices and maintained Source Code repository infrastructure (GIT).
- Used IAM for creating roles, users, groups and also implemented MFA to provide additional security to AWS account and its resources.
- Automated functional testing using Cucumber-Ruby Framework.
- Configured performance tests for critical applications using JMX and Scala.
- Set up dashboards for monitoring server infrastructure and SNS alerts for corrective actions or notifications using Cloud Watch service, Splunk, Datadog & New Relic.
- Set up PagerDuty integrations for critical AWS Services.
- Developed build and deployment scripts using MAVEN.
- Used JIRA ticketing system to keep track of issues and tasks on individuals.

AWS DevOps Engineer
Celesdata Inc - Irving, TX

Jan 2017 – Feb 2019

Responsibilities:

- Involved in Software Integration, Configuration, building, automating, managing and releasing code from one environment to another environment and deploying to servers.
- Worked on Cloud Front to deliver content from AWS edge locations to users, allowing for further reduction of load on front- end servers.
- Used AWS CLI to automate backups of ephemeral data-stores to S3 buckets, EBS and create nightly AMIs for mission critical production servers as backups.
- Used Python programming for deployment of Java applications and implementation and automation of Shell scripts for release and build automation.
- Worked on containerization and immutable infrastructure using Docker and Kubernetes.
- Used Docker Swarm to deploy spring boot applications.
- Created Docker images using a Docker file, worked on Docker container snapshots, removed images and managed Docker volumes.
- Configured Docker container for branching purposes and Implemented Docker automation solution for Continuous Integration / Continuous Delivery model.
- Created playbooks and roles for Ansible and deploying applications to AWS cloud using Ansible.
- Worked on developing Microservices using Spring Boot and exposed them as RESTful services.
- Automated the build and release management process with CI/CD across Dev, QA, Staging and Production environments including monitoring changes between releases.
- Performed Branching, Tagging, Release Activities on Version Control Tool GIT (GitHub).
- Used JIRA for creating bug tickets, workflows, pulling reports from dashboard.
- Provided On-Call support and services for highly complex and mission critical production environments applications on alternate week rotation basis.

- Provided periodic feedback of status and scheduling issues to the management.

Build & Release Engineer
Expedent Corp– Irving, TX

Jun 2016 – Dec 2016

Responsibilities:

- Launched Amazon EC2 Cloud Instances using Amazon Web Services (Linux/ Ubuntu/RHEL) and configured launched instances with respect to specific applications.
- Performed S3 buckets creation, policies and on the IAM role based policies and customizing the JSON template.
- Worked on AWS OpsWork, AWS Lambda, AWS Code Deploy, AWS cloud formation and cloud foundry.
- Managed servers on the Amazon Web Services (AWS) platform instances using Puppet, Chef Configuration management.
- Created Chef Automation tools and builds and did an overall process improvement to any manual processes.
- Installation, configuration and administration of Virtual Box and VMware virtual machine for RHEL, Ubuntu Linux servers.
- Wrote Chef Cookbooks for various DB configurations to modularize and optimize product configuration.
- Exported SQL data into Elastic search to allow much faster and scalable user searches from the database.
- Involved in Shell and Perl scripts for compilation and deployment processes and automation of builds and PowerShell for Windows deployment and Administration.
- Implemented Micro-services using Pivotal Cloud Foundry platform build upon Amazon Web Services.
- Worked with EC2 Container Service (ECS) to support Docker containers to easily run applications on a managed cluster of Amazon EC2 instances.
- Worked on Terraform, to create and compose all the components necessary to run application.
- Virtualized the servers using the Docker for the test environments and dev-environments needs.
- Actively interacted with the Business users, product owner and the developers in the agile team to understand the deployment and host scenarios

EDUCATION:

- Master's degree in Computer Science, University of Illinois, Springfield, IL.
- Bachelor's degree in Computer Science and Engineering, JNTUK
