

Alejandro Martinez

Mainframe | COBOL | Java | Automotive / Financial Industry | Agile

Rochester Hills, Michigan | 248-237-5335 | alex_martinez007@hotmail.com

Summary

Highly skilled and results-oriented Mainframe Lead/Developer with 18 years of experience in the automotive, financial and other industries. Proven ability to manage complex projects, deliver high-quality solutions, and provide technical expertise in middleware, ERP integration, and manufacturing systems. Proficient in a wide range of technologies, including Java, RESTful services, Linux, Mainframe, COBOL, JCL, DB2, CICS and SQL. Strong analytical, problem-solving, and communication skills. Adept at working independently and as part of a team to achieve project objectives and exceed customer expectations.

Skills

- Manufacturing Processes
- Manufacturing Operations
- Business Requirements
- ERP
- Database expert SQL, DB2
- Data Analytics
- Mainframe
- Cobol, JCL, CICS, Java, Python
- Microsoft Power BI, ETL

Experience

Mainframe Lead / Developer

Tata Consultancy Services

Jan 2020 – Present

Rochester Hills, MI

Lead and manage complex IT projects, delivering high-quality solutions for Stellantis in the automotive. Responsible for development and maintenance for 15+ applications in plant supply domain covering assembly, powertrain, stamping plants across North America (US, CAN, MEX). Specialize in middleware solutions for ERP integration with manufacturing systems, including warehouse management, materials management, scheduling management, shipment/receipt process, knowledge on EDI830 and EDI862. Provide technical expertise and leadership in analysis, development, and production support, leveraging a wide range of technologies, including Java, RESTful services, Linux, mainframe, COBOL, JCL, DB2, CICS and SQL. Work closely with clients onsite, utilizing Agile methodologies to ensure successful project execution and customer satisfaction.

Project Analysis, Design & Development:

Elicit and document comprehensive business, functional, and technical requirements.

Collaborate with stakeholders to define project scope, objectives, and deliverables.

Conduct thorough analysis to identify potential risks and dependencies.

Define project tasks, estimate effort, and develop detailed project plans.

Track progress, identify potential roadblocks, and proactively address issues.

Reverse engineering and Legacy application modernization.

Technical Expertise & Problem Solving:

Reduce 20% incidents by troubleshoot technical issues related to software development, including code conflicts, build errors, and deployment challenges.

Analyze and resolve production issues, ensuring system stability and performance.

Expertise on developed using COBOL, JCL, DB2, VSAM, CICS, IMS, SDSF, Fault Analyzer, CA7, Endeavor and batch process to send/receive data through SFTP from different systems. Also tools like ServiceNow, Splunk, Control-M, GitHub.

Testing & Validation:

Develop comprehensive test plans and test cases, including unit tests, regression tests, integration tests, and functional tests.

Code review to assure the developments follow the standards.

Work with project stakeholders to conduct User Acceptance Testing and Site Acceptance Testing.

Technical Skills & Experience:

Proficient in Java, RESTful services, Linux, mainframe technologies (COBOL, JCL, DB2, VSAM, CICS, IMS, MQ, SDSF, CA7, Endeavor, Mainview), SQL, Microsoft Visio and office, Json, XML, HTML, CSS.

In-depth knowledge of the automotive industry, with consulting experience at Chrysler/Stellantis.

Project Lead
Tata Consultancy Services

Sep 2018 – Dec 2019
Guadalajara, Mexico

This project involves analysis, design, development and testing for the Demand Resourcing Planning for Pepsico - SCPM. The system maintains part inventory levels at the plants. It has the responsibility to maintain Inventory and to provide account reporting.

Technologies used: Java, RESTful, JUnit, Mockito, SQL

IT Analyst
Tata Consultancy Services

Jul 2015 – Aug 2018
Guadalajara, Mexico

This project involves analysis, design, development and testing for the Money Movement in Financial Area. The system maintains user movements as Zelle for USAA bank. It has the responsibility to maintain the status data for all transactions and a history of all transactions in detail.

Technologies used: Java, RESTfull, Json, XML, HTML, CSS, JUnit, Control-M

IT Consultant
Emergys Mexico

Aug 2014 - Jul 2015
Guadalajara, Mexico

Developed and maintained software solutions for diverse clients in the food industry and IT, leveraging Emergys' WebFrame platform, Java, JavaScript, and web services. Specialized in gathering requirements directly from customers to deliver customized applications that optimized manufacturing processes and improved operational efficiency.

- Developed and maintained applications using Java, JavaScript, and web services within the Emergys WebFrame framework. Gathered and documented software requirements through on-site meetings and workshops with clients in the food industry.
- Translated customer needs into detailed technical specifications for development. Conducted thorough testing and debugging to ensure software quality and functionality.
- Created user documentation and provided training to clients on new applications. Contributed to projects that streamlined production processes, improved inventory management, and enhanced quality control in food manufacturing.

Software Developer (COBOL, JCL, DB2)
IBM Global Business Process Services

Jun 2013 - Mar 2014
Guadalajara, Mexico

Developed and maintained COBOL programs and JCL (Job Control Language) for core banking systems at Banco Estado of Chile, supporting critical functions in the SIG, DTC, and BCC areas. Ensured the efficient and reliable operation of these systems through rigorous testing and comprehensive documentation.

- Developed and maintained COBOL programs using the Roscoe platform. Developed and maintained JCL to automate batch processing and system tasks.
- Conducted thorough testing and debugging of COBOL code to meet quality standards.
- Created comprehensive technical documentation, including program specifications and operational procedures.
- Collaborated with teams in Chile to understand requirements and deliver solutions effectively.
- Utilized skills in SQL, DB2, Requirements Gathering, and other relevant technologies.

Project Lead – COBOL, JCL, DB2, Microsoft BI
Banco Azteca

Dec 2007 - May 2013
Mexico, DF

Led a team of 4 COBOL developers in supporting mission-critical accounting systems for Latin America, ensuring accurate financial reporting and regulatory compliance. Developed and maintained complex COBOL programs for general ledger, accounts payable, and accounts receivable, contributing to the bank's financial stability and operational efficiency.

- Developed and maintained COBOL programs using the Alnova platform, MicroFocus, and UltraEdit. Conducted thorough testing and debugging to ensure the accuracy and integrity of financial data.
- Created technical documentation for COBOL/JCL applications, including program specifications and user manuals. Provided timely application support, resolving user issues and ensuring system stability.

- Collaborated with business analysts and stakeholders to gather requirements and translate them into technical specifications. Developed reports to support financial analysis and decision-making.
- Experienced with Microsoft SQL and DB2. Proficient in ClearQuest and ClearCase version control software and followed Agile methodologies.
- Ensured the smooth execution of end-of-month processing, including account reconciliation and financial reporting.

Education

Computer Science, Instituto Tecnológico de Lázaro Cárdenas| México

Training & Awards

Better practices on Oracle | IBM InfoSphere Business Information Exchange Technical Professional |
Process Implementing with IBM Business Process Manager Standard V8.5 – II | Implementing a Microsoft SQL Server
2005 | Python Bootcamp for Machine Learning | Power BI PL-300 | AWS Mainframe Modernization platform
