SUMMARY

DevOps Engineer with over 4 years of experience optimizing software delivery and infrastructure management through robust automation, cloud orchestration, and CI/CD practices. Adept in Agile and Waterfall methodologies, with expertise in deploying cloud-native applications on AWS, Azure, and GCP. Skilled in building and maintaining CI/CD pipelines using Jenkins, GitHub Actions, and Git, and automating infrastructure provisioning with Terraform, Ansible, Chef, and Puppet. Proficient in scripting with Python, Bash, TypeScript, and Go to support configuration, deployment, and monitoring workflows. Experienced in containerization with Docker and Kubernetes for scalable, fault-tolerant environments. Knowledgeable in implementing logging and monitoring solutions using ELK, Splunk, and Prometheus, and managing Linux-based systems and web servers. Strong background in database administration and automation using MySQL, SQL Server, AWS RDS, and AWS Lambda.

SKILLS

Methodologies: SDLC, Agile, Waterfall

DevOps & Automation: Docker, Kubernetes, Terraform, Ansible, Puppet, Bash

CI/CD: Continuous Integration (CI), Continuous Delivery (CD), Git, Jenkins, GitHub Actions

Cloud Platforms: AWS (EC2, S3, VPC, RDS, Lambda, CloudFormation, IAM), Microsoft Azure, GCP

Monitoring & Logging: Prometheus, Grafana, ELK Stack (Elasticsearch, Logstash, Kibana), Splunk

Programming Languages: Python, TypeScript, Go

Databases: MySQL, MS SQL Server, AWS RDS

Unix/Linux Systems: Ubuntu, Red Hat, CentOS, System Calls, Filesystems

Configuration Management: Ansible Playbooks, Chef Cookbooks, YAML, Nagios

Web Servers: Apache Tomcat, Nginx

Scripting & Automation: Bash Scripts, Python Scripts, AWS Lambda functions, Terraform Templates

EXPERIENCE

DevOps Engineer | Morgan Stanley, USA

Jan 2024 - Present

- Built infrastructure as code using Terraform, and orchestrated deployments with Kubernetes and Docker, resulting in improved scalability and 30% faster release cycles.
- Architected and maintained Azure-based cloud environments, implementing performance tuning and resource optimization for high availability and cost efficiency.
- Deployed real-time monitoring solutions with Prometheus and Grafana, enabling proactive system diagnostics and reducing MTTR (Mean Time to Repair) by over 30%.
- Streamlined server provisioning and application deployment using Ansible and Chef, leading to consistent environment configurations and a 50% boost in deployment speed.
- Tuned and managed Nginx web servers for high-traffic environments, improving load balancing and request handling across distributed Red Hat and CentOS systems.
- Wrote automation scripts in Bash and Python to handle system maintenance, log processing, and performance metrics collection, reducing manual workloads.

DevOps Engineer | Intex Technologies, India

Jan 2021 - Sep 2023

- Implemented infrastructure automation using tools like Puppet, Ansible, and shell scripting, reducing manual deployment errors and increasing environment consistency by 40%.
- Considered and maintained CI/CD pipelines in Jenkins, automating code integration, testing, and deployment for rapid and reliable software delivery.
- Administered and fine-tuned AWS environments including EC2, S3, VPC, IAM, RDS, Lambda, and CloudFormation—achieving 99.9% availability and optimizing cloud spend by 20%.
- Industrialized centralized logging and monitoring solutions using ELK Stack and Splunk, accelerating incident response time and enhancing system visibility by 25%.
- Automated cloud infrastructure provisioning with Terraform and AWS Lambda, slashing setup time by 50% and supporting agile deployment cycles.
- Engineered and secured high-availability database systems in MySQL and Microsoft SQL Server, ensuring performance optimization and business continuity for data-heavy applications.
- Administered and supported Linux environments (Ubuntu), managing system performance, file systems, and process-level optimizations for better reliability.
- Partnered with engineering teams to design and implement containerized CI/CD workflows, ensuring seamless application delivery from development to production.
- Exploited YAML configurations to manage infrastructure setups and monitor system states, standardizing deployment procedures across development and production.

EDUCATION

Masters of Science in Cyber Security

May 2024

Saint Peter's University, NJ, USA

Bachelor of Engineering in Electronics and Communications Engineering

Jun 2022

Jawaharlal Nehru Technological University, Hyderabad, India
