EXECUTIVE SUMMARY

Software and Azure DevOps engineer with 10 years of experience in healthcare equipment, oil and gas, and gaming industries. Expertise in C#, .NET, React, Azure, and SQL. Proven success in leading projects, optimizing performance, and delivering timely results. Skilled in Agile methodologies, SDLC, and engineering best practices, with a strong track record in integrating advanced devices to meet business needs and enhance user satisfaction.

TECHNICAL SKILLS

Full-Stack: C# (.NET Core/ASP.NET/MVC/Entity Framework/WPF), JavaScript(Node, React, Typescript), SQL, Microservices

Scripting: Bash, PowerShell, Python, R

Cloud Technologies: Azure (SQL Server, Functions, VM, App Service, DevOps), AWS(Lambda, DynamoDB, MongoDB S3, IAM)

Other Tools: Git, SSMS(SSIS, SSRS), Visual Studio, Spotfire, Telerik & Kendo UI, Cygwin, Monday.com, Zoho CRM, R Studio

WORK EXPERIENCE

CVS Health, Providence, RI

June 2022 – Present

Senior .Net Full Stack Developer

- Designed and developed web applications using **ASP.NET, C#, Angular (12/16/18)**, and **Entity Framework Core**, including migrating desktop applications to web-based platforms for enhanced scalability.
- Integrated **AWS DynamoDB** for high-availability storage in claims management systems, ensuring 99.9% uptime during peak traffic.
- Developed RESTful APIs that interfaced with **MongoDB Atlas**, enabling dynamic aggregation of healthcare provider data and enhancing query flexibility.
- Developed and consumed **WCF** services for **SOA**-based integrations and **RESTful APIs** for lightweight **microservices**, including Spring Boot-based backend services
- Designed scalable architectures for digital claims management and other applications, incorporating **dependency injection (DI)**, **identity management**, and **Entity Framework Core migrations**.
- Configured **CI/CD pipelines with Azure DevOps**, automating deployment processes for .NET and Spring Boot **microservices**.
- Optimized **database performance** through schema design, table partitioning, and indexing, and created **T-SQL stored procedures**, views, and queries.
- Designed and deployed reports using **SSRS, Crystal Reports, and SSIS**, enhancing data visualization and integration.
- Developed **Shell** scripts for file processing and automation, such as unzipping files, renaming, and data cleansing.
- Collaborated on creating interactive dashboards and navigation systems, improving user satisfaction by 10%.
- Spearheaded bug fixing and system debugging efforts, and providing support in testing and production environments.

VirtuSense Technologies, Peoria, IL

July 2022 – Present

Software Engineer

- Developed new assessments and feature updates for the Balance product in assessments such as Gait, ROM, 5x Sit-to-Stand etc., and added Crash Reporting via Email and extensive logging, using **C#, .NET framework 4.7, React, and Typescript**, increasing customer satisfaction by 30%.
- Integrated **Azure Service Bus** to enable decoupled communication between microservices, improving system scalability and reducing processing time by 30%.
- Developed and deployed **Azure Function Apps** to automate event-driven processes, achieving a 40% reduction in manual intervention and improving workflow efficiency.
- Implemented **Azure Service Bus Topics and Subscriptions** to manage complex message routing and filtering, enhancing message delivery reliability for distributed applications.
- Utilized **Azure Function Triggers** for event-based processing, optimizing data pipeline automation and reducing processing delays by 25%.
- Led the release process for Balance software, including creating installers, building software, versioning, testing and managing server uploads and updates, ensuring 99% uptime. Created **Bash/PowerShell** scripts to automate much of the process.
- Collaborated in a **cross-functional Agile** team with product managers, project managers, and developers, using Monday.com, driving 70% of development efforts and reducing issue resolution time by 35%.
- Developed a Kiosk version of Balance with **end-to-end project ownership**, to ensure robust, standalone operation, and deployment flexibility.

- Served as the **subject matter expert** on the **internal architecture** and functionality of Balance software, providing guidance and insights to **cross-functional teams** including nurses, therapists and client partners, improving operations efficiency by 60%
- **Trained new hires and interns** in setting up development environments, understanding code architecture, and solving client issues, reducing onboarding time by 50% and increasing coding efficiency by 30%.
- Managed version control using **GitHub** in a multi-repository codebase, including **sub-repositories**, **pull requests**, and **peer reviews**, ensuring code quality and stability.
- **Led and facilitated brainstorming** sessions with product managers and **stakeholders**, driving innovative product development and continuous improvements.

Red Stone Resources LLC., Frisco, TX

July 2017 – July 2022

Software Engineer

- **Architected** and developed MINDS, a mineral inventory management web app with **ASP.Net Core**, **Telerik**, and **Kendo UI**, deployed on **Azure App Service** and **SQL Server**; enhanced features, fixed critical bugs, and optimized performance.
- Conducted extensive ETL of oil and gas data into **Azure cloud** using **SSIS**, enhancing data accessibility for web applications, **SSRS** reports and third-party software and hence the productivity of sales, acquisitions and legal teams by 60%.
- Utilized **Entity Core Framework** to streamline data retrieval and population between the MINDS application and the database, using **LINQ** queries, enhancing data handling efficiency and reducing query times by 35%.
- Implemented **Azure DevOps** for code management, work tracking, and **CI/CD pipelines**, significantly reducing deployment times by 40% and enhancing overall code quality and project efficiency.
- Designed and integrated **Azure Logic Apps** to automate and orchestrate workflows between MINDS application and third-party systems, reducing manual processes by 30% and improving overall operational efficiency.
- Implemented R in Spotfire for **data manipulation and visualization** using maps, type-curves and charts, boosting scientist and deal maker productivity by 60%.
- Evaluated and administered **visualization tools** like ComboCurve and Enverus; created type-curves and valuation reports for revenue and well forecasting, improving accuracy by 20%.
- Conducted 10+ training sessions for internal customers on MINDS, gathered feedback, and recommended improvements, boosting user adoption by 50%.
- Developed a Spotfire application using R to consume RESTful web services (**DrillingInfo** and **Accurint Web APIs**) and obtain and clean contact details, improving data retrieval speeds by 100% and accuracy by 20%.
- Provided **administrative support** for **Zoho CRM**, optimizing user workflows and increasing efficiency by 60%.

Progress, Bedford, MA

Jun 2016 – Aug 2016

Product Tools Intern

- Acquired proficiency in **Agile software development methodologies** and bug tracking systems such as CQ and TeamPulse.
- Leveraged Perl to add and modify code for bug migration, enhancing workflow efficiency by 20%.

Macle Grafics, Bangalore, India

July 2014 – March 2015

Game Developer

- **Designed and implemented** a multiplayer racing module and nitrous oxide power-up feature for "Real Steal Racing Live," in **Unity** software significantly enhancing gameplay experience; achieved over 100,000 downloads on Google Play.
- **Led game design and development** for "Last Hope," a vertical scroller; the game received critical acclaim and high ratings on popular game review websites.
- Collaborated with senior developer in **performance optimization**, resulting in a 20% improvement in user engagement and a smoother gameplay experience.

MobiEos Software Pvt. Ltd, Bangalore, India

Sep 2013 – July 2014

Software Engineer

- Led a **cross-functional scrum** team to create game concepts, documents, and presentations.
- Instrumental in programming, **application design**, **testing**, **evaluation** and **team management**, driving a 25% increase in project efficiency.

EDUCATION

University of Massachusetts — Lowell, MA

May 2017

M.S. in Computer Science

ICAT Design and Media College — Karnataka, India

May 2013

P.G. Diploma Game Design

Manipal Institute of Technology — Karnataka, India

May 2012

B.E. in Electronics and Communication Engineering
