Professional Summary

Seasoned Senior Full Stack Java Developer with 10+ years of expertise in backend and frontend development, microservices architecture, cloud-native solutions, and API design. Skilled in CI/CD, container orchestration, database management, and delivering secure, high-performance software in dynamic, fast-paced environments.

- Extensive expertise in Java development, leveraging proficiency across Java versions (17 through 6) and deep understanding of Core Java, J2EE, Kotlin, and JVM internals. Skilled in multithreading, concurrency, memory optimization, and OOP design principles.
- In-depth knowledge of the Spring ecosystem, including Spring Boot, Spring Cloud, Spring WebFlux, Spring Batch, Spring JMS, Spring Security, and Spring MVC for developing robust, scalable enterprise solutions.
- Proficient in ORM tools such as Hibernate and Spring JPA, alongside Spring JDBC for reliable and maintainable database integration.
- Strong frontend development skills using JavaScript, TypeScript, HTML5, and CSS3. Experienced in building **dynamic, component-driven user interfaces using React**, Angular (10+), AngularJS, Vue.js, and jQuery.
- Expertise in developing **React-based SPAs**, leveraging hooks, context APIs, and reusable components to deliver high-performance and maintainable UIs.
- Hands-on experience integrating **React** with RESTful APIs and GraphQL endpoints, delivering real-time web applications for diverse industries including healthcare and finance.
- UI/UX optimization using frameworks like Bootstrap and Material-UI, with Ajax for seamless asynchronous interactions.
- Comprehensive experience in API development, designing and implementing RESTful APIs (JSON), SOAP APIs (XML), and GraphQL services. Skilled in Postman and SoapUI for end-to-end API validation and debugging.
- Expertise in Microservices and SOA architectures with practical application of design patterns (Singleton, Factory, Strategy) for scalable and loosely coupled systems.
- Strong security practices using OAuth 2.0, JWT, and secure token-based authentication flows to ensure enterprise-grade application safety.
- Proven cloud-native development experience on AWS, Azure, and GCP platforms. Skilled in deploying and managing services using AWS Lambda, S3, IAM, Azure Functions, Blob Storage, and more.
- Proficient in API Gateways like AWS API Gateway, Azure API Management, and Zuul for request routing, throttling, and securing external/internal APIs.
- Backend expertise using Node.js for lightweight, non-blocking services supporting event-driven and asynchronous use cases.
- DevOps and automation experience with Jenkins, GitHub Actions, GitLab CI/CD, and Bamboo. Strong in containerization using Docker and orchestration with Kubernetes for scalable and resilient deployments.
- High emphasis on code quality using tools like SonarQube, JaCoCo, PMD, Checkstyle, and best practices in TDD and code reviews.
- Database proficiency with relational (PostgreSQL, Oracle, MS SQL Server) and NoSQL (MongoDB, Cassandra) systems, optimizing queries and indexing for performance.
- Application server experience with JBoss, Tomcat, WebSphere, WebLogic, and GlassFish; Build tools expertise with Maven, Gradle, SBT, and Ant.
- Source control expertise using Git, GitHub, GitLab, Bitbucket, and SVN; Issue tracking through Jira, Bugzilla, Redmine, and GitLab Issues.
- Extensive testing experience across layers using Angular Testing Library, Jasmine, Karma, **React Testing Library**, Mocha, Chai, JUnit, TestNG, Selenium, and Cucumber.
- Familiarity with monitoring and observability using Prometheus, Grafana, ELK Stack, and advanced logging with Log4j, SLF4J, and Logback.
- Strong Agile/Scrum background using tools like Confluence, GitLab Wiki, Bitbucket Wiki, and SharePoint for collaboration and documentation.
- Event-driven architecture experience with Apache Kafka, RabbitMQ, and ActiveMQ for real-time messaging and system decoupling.

- Demonstrated leadership in mentoring junior developers, enforcing code standards, and driving architectural decisions in enterprise environments.

Professional Experience

Client: Rochester Regional Health, Rochester, NY

Jan 2023 - Till Date

Senior Java Full Stack Developer

Roles & Responsibilities:

- Collaborated with healthcare stakeholders and Agile teams to deliver scalable, HIPAA-compliant solutions aligned with HL7 and FHIR standards, driving the full SDLC from discovery to post-deployment support.
- Built backend systems using Java 17, Java 14, Core Java, and Kotlin, leveraging sealed classes and pattern-matching switches to support EHR modules, patient management, and billing workflows.
- Developed Spring Boot-based Microservices supporting core features such as patient onboarding, appointment scheduling, e-prescribing, and claims processing.
- Designed and implemented Spring Batch jobs to process large healthcare datasets like lab results and insurance claims with high throughput and accuracy.
- Utilized Spring WebFlux for building non-blocking, reactive services supporting real-time scenarios like vitals monitoring and asynchronous alerts.
- Secured sensitive patient data using Spring Security, OAuth2, and JWT to ensure HIPAA compliance through fine-grained access control and encrypted authentication.
- Managed healthcare data persistence via Spring JPA and Hibernate using HQL and Criteria API to query longitudinal patient records and encounter histories.
- Developed highly responsive user interfaces using **React 18**, TypeScript, Bootstrap, HTML5, and CSS3 for physician dashboards, care team views, and patient-facing portals.
- Built reusable React components and implemented **React Hooks** for stateful interactions across modules such as appointment tracking, lab result updates, and medication logs.
- Leveraged **React Query** for efficient client-side data caching and real-time UI synchronization with backend health data APIs.
- Designed and tested RESTful APIs using HL7, FHIR, and JSON standards to support interoperability across hospital systems; documented with Swagger and validated via Postman.
- Used GraphQL to optimize API consumption and minimize over-fetching of clinical data in React-based views for care plans and diagnostics.
- Developed Node.js-based backend components for event-driven use cases such as lab result alerts, prescription readiness, and emergency status updates.
- Integrated AWS services like Lambda, S3, and IAM for serverless deployments and secure storage of patient health records and documentation.
- Automated deployments using GitHub Actions and AWS CodeBuild; containerized services with Docker and orchestrated using Kubernetes for multi-region, high-availability healthcare systems.
- Maintained strong backend code quality with JaCoCo and enforced test coverage for modules like clinical decision support and e-prescriptions.
- Enabled asynchronous, secure messaging using Apache Kafka for workflows involving HL7 messaging, real-time alerts, and patient engagement notifications.
- Managed NoSQL data stores like MongoDB and DynamoDB for unstructured clinical data, including scanned documents and observational notes.
- Monitored system metrics and service health using Prometheus and Grafana for critical workflows including triage, remote monitoring, and emergency intake.
- Implemented end-to-end testing using Cucumber and TestNG for backend logic, and **React Testing Library** with Jest to validate React component behavior across patient-centric modules.
- Used GitLab for version control, Jira for Agile tracking, and Log4j for audit logging; maintained compliance documentation and DevOps runbooks in GitLab Wiki.

Client: UBS, New York, NY

Aug 2019 - Dec 2022

Senior Java Full Stack Developer

Role & Responsibilities:

- Actively participated in **Agile** ceremonies including sprint planning, reviews and daily stand-ups while adhering to the **Software Development Life Cycle (SDLC)** to ensure the timely delivery of high-quality, compliant financial software solutions.
- **Developed** robust backend functionalities using **Java 11** and **Core Java** to support critical financial systems, leveraging modern features such as the enhanced HTTP Client API, Lambda expressions, Stream API and var for scalable and efficient code.
- Designed microservices with **Spring Boot** for financial applications such as trading platforms and payment gateways, enhancing scalability and security.
- Implemented batch processing workflows with **Spring Batch** to handle large volumes of financial transactions and reports, ensuring data integrity and performance.
- Implemented **Spring Cloud** to enhance financial applications with distributed configuration management, service discovery and resilience patterns, ensuring scalable and fault-tolerant microservices architectures.
- Utilized **Spring Data JPA** and **Hibernate** to create high-performance data layers for banking applications, improving access to transactional and master data.
- Built responsive front-end interfaces for financial dashboards and client portals using **Angular 7**, **TypeScript**, **HTML5**, **CSS3** and **Bootstrap**.
- Applied **Angular** features like two-way data binding and **RxJS** to develop dynamic, reactive modules for trading dashboards and customer onboarding systems.
- Designed microservice architectures using the **Factory** pattern and integrated **GraphQL** for flexible querying of financial data like account summaries and transaction histories.
- Developed secure **REST APIs** to handle sensitive financial data, managed access via **AWS API Gateway** and implemented authentication with **JWT** and **OAuth 2** to comply with regulations like PCI DSS and GDPR.
- Created backend services using **Node.js** to support real-time features such as stock price updates and payment status tracking, utilizing non-blocking I/O and high concurrency models.
- Enhanced cloud infrastructure for financial platforms by leveraging **AWS** services including **EC2**, **S3** and **IAM**, ensuring secure and scalable deployments.
- Streamlined CI/CD pipelines using **Jenkins** and **AWS CodePipeline** for continuous deployment of banking microservices, with **Docker** and **Kubernetes** for orchestration.
- Ensured code reliability with **SonarQube**, accelerated build processes with **Gradle** and utilized **Visual Studio Code** for debugging finance-focused applications.
- Implemented **RabbitMQ** for asynchronous communication across services like transaction processing and fraud detection and deployed applications on **Apache Tomcat** for scalability.
- Managed large-scale distributed financial datasets using **Cassandra**, ensuring fault tolerance and high performance for transaction logging and customer analytics.
- Conducted testing using **Apache JMeter** for performance under high-load scenarios, **Mockito** for backend unit testing and **Karma & Jasmine** for client-side functionalities in financial apps.
- Monitored system performance using the **ELK stack**, tracked changes via **GitLab** and **Bitbucket**, maintained centralized logs with **SLF4J** and documented processes using **Bitbucket Wiki** for governance and traceability.

Client: Scotia bank, New York, NY

Mar 2016 - July 2019

Java Full Stack Developer

Responsibilities:

- Led the design, development, and maintenance of scalable enterprise applications by following Agile methodologies and a structured Software Development Life Cycle (SDLC).
- Developed high-performance backend services using Java 8 and Core Java, leveraging lambda expressions, streams, and functional interfaces for clean, efficient code.
- Built and maintained modular Microservices using Spring Boot, streamlining development and deployment across key banking systems.
- Created and scheduled data-heavy batch processes using Spring Batch for processing customer transactions, loan histories, and financial reports.
- Secured application layers using Spring Security and OAuth2, and implemented robust data access via Spring JDBC and Spring Data.
- Designed responsive web applications with **React**, JavaScript, HTML5, CSS3, Bootstrap, and Material-UI, enhancing customer and staff-facing banking portals.
- Built reusable **React components** for features like account dashboards, loan applications, and fund transfer interfaces, improving maintainability and UX consistency.

- Utilized **React state management** (Context API, Redux) to maintain seamless user experiences across multistep workflows like loan origination and KYC verification.
- Developed RESTful APIs using JSON and implemented Microservices architecture with robust security, using Azure API Management to handle API versioning and access controls.
- Built lightweight, asynchronous backend modules with Node.js to support real-time banking transactions and alerts.
- Integrated Azure services such as Azure Functions, Blob Storage, and Azure AD for secure, scalable cloud-based processing and storage.
- Automated build and deployment pipelines with Bamboo, leveraging Docker for containerization and Kubernetes for orchestration of banking microservices across environments.
- Maintained coding standards using Checkstyle and ensured high-quality code through peer reviews and unit testing.
- Streamlined builds and project dependencies with Maven, and used Eclipse IDE for debugging, profiling, and rapid development.
- Employed ActiveMQ for asynchronous event processing and deployed enterprise banking apps on WebLogic servers for enhanced availability and transaction resilience.
- Tuned PostgreSQL database operations with indexing, query optimization, and partitioning to handle large volumes of financial and transactional data.
- Conducted unit and integration testing with Mocha and Chai for frontend, and Cucumber for backend workflows—ensuring end-to-end reliability.
- Used GitHub for version control and collaboration, Bugzilla for tracking banking workflow issues, and Confluence for maintaining project documentation and knowledge sharing.
- Applied **React Testing Library** and Jest for frontend component validation across user flows such as balance inquiries, account setup, and loan approvals.

Client: EBay Austin, TX

Dec 2014 - Feb 2016

Java Developer

Responsibilities:

- Participated in Agile development processes and followed structured SDLC methodologies to deliver reliable and scalable e-commerce software solutions.
- Developed and optimized backend services using Java 7 and Core Java, employing features like try-with-resources, the Fork/Join framework, NIO2, and Diamond Operator to improve code efficiency and parallel processing.
- Enabled streamlined integration across enterprise systems using Spring Integration for workflow automation and inter-service communication.
- Built user-centric web applications using Spring MVC, focusing on modular design patterns and clean separation of concerns for maintainability.
- Interfaced with Oracle Database through Spring JDBC, delivering fast and reliable transactional operations across large product and order datasets.
- Developed rich, interactive front-end interfaces using **React (early adoption)** alongside JavaScript, HTML5, CSS3, and Bootstrap, focusing on component-driven UI patterns.
- Created reusable **React components** to support common UI features such as product listings, cart summaries, and search filters, improving performance and reusability across eBay's internal tools.
- Collaborated on hybrid UI development using **React and AngularJS 1.1**, supporting the transition toward modern frontend architecture for specific modules like inventory tracking and seller dashboards.
- Built and maintained SOAP-based services for large-scale data integration; tested endpoints using SoapUI and optimized XML payload handling.
- Managed load balancing and routing logic using Zuul to ensure high availability and performance for customer-facing endpoints.
- Secured access to cloud resources through AWS IAM and integrated Amazon S3 for distributed file storage of user-uploaded media and metadata.
- Streamlined CI/CD pipelines using GitLab, ensuring rapid and stable deployments across development, QA, and production environments.
- Handled build processes using SBT and implemented JMS-based messaging for asynchronous processing in distributed workflows like payment notifications and order confirmations.

- Deployed enterprise Java applications on GlassFish application servers and utilized NetBeans IDE to enhance productivity during development and debugging.
- Practiced rigorous version control with Git and managed defect tracking via Bugzilla. Wrote Selenium and TestNG test suites to validate UI and backend logic; maintained project documentation on SharePoint for centralized access and team collaboration.

Client: TechSophy, Hyderabad, India

July 2012- Aug 2014

Java Developer

Responsibilities:

- Developed and optimized backend systems using **Java/J2EE** and OOP principles, leveraging features such as multithreading, collections framework, exception handling, Servlets, JSP and EJB, with a focus on Polymorphism and Encapsulation for scalable and maintainable applications.
- Developed robust web applications using **Spring MVC**, ensuring efficient client-server interaction and streamlined request and response handling.
- Integrated **Spring LDAP** to provide secure and efficient user authentication and authorization through directory services.
- Created responsive and visually appealing user interfaces with **HTML, CSS** and **Ajax**, enhancing the overall user experience and interactivity.
- Leveraged **jQuery** for DOM manipulation, event handling, **AJAX** calls and integrating plugins to improve web application responsiveness and performance.
- Designed and developed **SOAP**-based APIs for seamless communication with external systems, enabling reliable data exchange via **XML**-based protocols.
- Managed database operations using **MS SQL Server**, designing, developing and maintaining database schemas to ensure optimal performance and efficient data retrieval.
- Automated the software build, deployment and testing lifecycle using **Jenkins** for CI/CD pipelines and **Ant** for build automation, enhancing development efficiency.
- Ensured code quality and functionality by writing and executing unit tests with **JUnit**, supporting effective regression testing and maintaining robust software.
- Followed **agile** methodologies, collaborating in sprint cycles with cross-functional teams to deliver features and improvements on schedule.
- Deployed enterprise-grade applications on **WebSphere**, managed version control with **Subversion** (SVN) and ensured smooth coordination of codebase updates across distributed teams.

Education

- Bachelors in Computer Science.

Certifications

- AWS Certified Solutions Architect Associate.
- Microsoft Certified: Azure Developer Associate.
