

Ankitha Gujjula

Email: ankithagujjula01@gmail.com

Ph#: (972) 695 – 9622

Professional Summary:

- **Full Stack Developer** with over **6+ years** of experience in Software Analysis, Object Oriented Design, Development, Implementation and Testing of Object Oriented Applications and Web based Enterprise Applications using **Java/J2EE**.
- Experience in **Software Development Lifecycle (SDLC)** phases such as Analysis, Design, Implementation, Testing and Deployment.
- Experience in **spring framework (Core, spring batch, Spring DAO, Spring AOP, Spring ORM, Spring Boot)** server-side component architecture for simplified development of distributed, transactional, secure and portable application based on Java Technology.
- Experience in **spring (MVC), Spring Boot, Spring Batch, Java Persistence API, Spring JDBC and Hibernate (Object Relational Mapping Technology)**.
- Experience in **Hibernate** and the **O/R mapping** to map Java domain objects with the database, **spring framework** to easily configure J2EE applications.
- Experience on different **IDEs** such as **RAD, Eclipse, Spring Tool Suite, and IntelliJ**.
- Skilled in **Java 17** for Java application development, leveraging its support for sealed classes, pattern matching for switch statements, and other productivity-focused features.
- Experience with **Java 11/8** features such as **lambda expressions, Streams, Parallel Operations on Collections**.
- Experience in developing web pages using **HTML5, CSS3, JQuery, Bootstrap, JavaScript, Angular JS, Angular 14/12/10 Versions, Node.JS, and Ajax** for providing the user interface and communication between the client and server like Singleton, Factory, MVC, Data Access Object and Business Delegate.
- Experience in various **Java/J2EE Design Patterns** such as **Session Façade, Service Locator, Application Controller, Front Controller, Factory, Prototype and Singleton**.
- Experience in **XML** related technologies like **XSL, XSD, XPATH, DTD, and XML Schemas, XML Parsers like DOM & SAX**.
- Experience in **Java** concepts such as Collections, Multi-threading, Synchronization, Exception Handling and OOPS concepts.
- Experience in Integration of **Amazon Web Services AWS** with other applications infrastructure.
- Experience with building Docker Images and running them on **Docker** containers.
- Experience using various application servers - **Apache Tomcat, JBoss, Weblogic and IBM WebSphere Application Server**.
- Experience in **SOA (Service Oriented Architecture)** experience in developing web services using **SOAP & REST**.
- Well experienced in software development methodologies such as **AGILE, waterfall** and attending the **SCRUM** meetings processes.
- Strong written and verbal communication skills along with strong interpersonal, analytical and organizational skills.

Technical Skills:

Languages	Java 17/11/8, PL/SQL, SQL, Python
Java/J2EE Technologies	Core Java, JSP, JDBC, JMS, Java Beans, Java Multithreading, Generics and Collections, EJB, Tiles
Web Technologies	HTML5, XML, XSLT, DOM, JSON, CSS3, JavaScript, XPath, AJAX, Angular 14/12/10, Angular.js, Node.js
Methodologies	UML, Agile, Waterfall
Web Frameworks	Spring (IOC, MVC, Boot), Hibernate
Design & GUI Tools	Eclipse, IBM RAD
Cloud Services	AWS, GCP
App servers	IBM Web Sphere, Apache Tomcat, BEA Web Logic

Databases/Tools	Oracle 11g/10g/9i, SQL Server, MySQL
Operating Systems	Windows, Linux, UNIX

Professional Experience:

Client: Verizon, Irving, TX

Jul 2023 – Till date

Role: Full Stack Developer

Responsibilities:

- Involved in the complete SDLC including design of System Architecture, development of System Use Cases based on the functional requirements.
- Implemented **Java 17** features like Lambda expressions, Streams, filters, pipelines, Optional Interfaces, etc.
- Used **java 17** lambda expressions along with streams like Parallel Streams for performing chain operations such as filter, map, and collect on a collection.
- Developed robust, high-performance Java application using **Java 17** and **J2EE**, ensuring **code quality** and adherence to **best practices**.
- Designed the applications using **Spring MVC** framework for easy maintainability.
- Developed the application for incident creation and retrieving the events using restful web services with **spring Boot**.
- Developed **RESTful** services using **Spring Boot** and deployed to **pivotal cloud foundry (PCF)**.
- Used **Spring Boot** to collect the data from users and packaged the data as **JSON** distributed to applications.
- Developed the business layer using **spring Boot**.
- Used **Eclipse** as **IDE** tool to develop the application.
- Used **Hibernate** in persistence layer and developed **POJO's**, Data Access Object to handle database operations.
- Used **Hibernate Transaction Management**, **Hibernate Batch Transactions**, and **Hibernate cache concepts**.
- Worked on Web/User Interface development using **AJAX**, **HTML5**, **XHTML**, **DHTML**, **CSS3**, **Java Script**.
- Designed and developed modular Angular components, ensuring seamless UI reusability, while implementing **Angular 14** routing for a more intuitive and user-friendly experience.
- Created forms to collect and validate data from the user in **HTML5** and **Angular.JS**.
- Used **Node.js** as a proxy to interact with Rest services and interacting with Database.
- Implemented Messaging using **JMS** to get the status of the services.
- Used **XML** for **data exchange and schemas (XSDs)** for **XML validation**. Used **XSLT** for transformation of **XML**.
- Used **Java Messaging Services (JMS)** for reliable and asynchronous exchange of important information.
- Deployed **Docker** contained **Spring Boot** micro services in to **AWS EC2 container** service using **AWS admin console** and used lambda to run applications in **AWS console**.
- Deployed the application on **Amazon Web services (AWS)** and used it to provide a large computing capacity for scalable solutions.
- Developed session **EJB** and **message driven bean (MDB)** to process **JMS XML messages**.
- Involved in fixing bugs the bugs or defects in the application and Used **Log4J** for any logging purposes during the development of the application.
- Generated **JUnit** test cases for testing various Java components.
- Used **JENKINS** as a continuous integration (CI) tool, for deploying applications into Weblogic Application Server.
- Developed reusable and interoperable Web service modules based on **Service-Oriented Architecture (SOA)** by using **SOAP** and **RESTful** services.
- Worked on **MongoDB** database concepts such as locking, transactions, indexes, replication, schema design, etc.
- Involved coding **SQL Queries**, **Stored Procedures** and **Triggers**.
- Followed the **Agile Scrum** software development methodology.
- Actively participated and provided feedback in a constructive and insightful manner during weekly Iterative review meetings to track the progress for each iterative cycle and figure out the issues.

Environment: Java 17, spring, Spring Boot, Hibernate, MVC, Micro Services, RESTful, POJO, HTML5, CSS3, JavaScript, Angular 14, Angular.js, Node.JS, AJAX, Docker, Jenkins, JMS, AWS, XML, EJB, Log4j, JUnit, SOAP, MongoDB, NoSQL, SQL, Agile and Windows.

Client: Broadridge Financial Service, NY

Jul 2022 – Jun 2023

Role: Full Stack Developer

Responsibilities:

- Involved in requirement, design and development phases and creating custom solutions to match the requirements.
- Creating REST web services to publish ML models - business function and earnings code prediction models via API as predictive analytic service using **Java 11**.
- Used **Java-8** features while developing the application.
- Utilized **Java 8** features like Lambda expressions and Stream API for Bulk data operations on Collections which would increase the performance of the Application.
- Using **spring Framework** developed and implemented the web-based application following the **MVC**.
- Used **Spring MVC** as Web module, involved in design, development of new Action classes to interact with business logic and Used Hibernate as ORM to map Java classes to data base tables.
- Developed **micro services** with **spring** and tested the application using **Spring Boot**.
- Worked extensively on **Spring Boot** for building **REST API's**.
- Used **Spring BOOT** to create stand-alone spring applications.
- Designed and developed **Micro services** business components using **Spring Boot**. Consumed **REST** based Micro services with Rest template based on **RESTful APIs**.
- Developed Data Access Layer using **Hibernate ORM framework**.
- Created connections to database using **Hibernate session Factory**, using **Hibernate APIs** to retrieve and store data to the database with **Hibernate transaction control**.
- Designed and developed very complex and large web pages using **HTML5, CSS3, JQuery** and **Bootstrap** for Dynamic web pages.
- Developed **Single Page application (SPA)** using **Angular 12**. Created reusable Components, Pipes, Directives and Services using **Angular 12**.
- Created Reusable Modules and Custom Directives in **Angular 12** which got used in various places of application.
- Used **Angular.JS** to create views to hook up models to the **DOM** and synchronize data with server as SPA.
- Worked on **Java Messaging Services (JMS)** for developing messaging services. Implemented different types of messaging prototypes using **JMS**.
- Created **XML Schema, XML template** and used **XML SAX/DOM API** to parse them.
- Involved in designing and deploying multitude applications utilizing **AWS stack (Including EC2, Route53, S3, RDS, Dynamo DB, SNS, SQS, IAM)** focusing on high-availability, fault tolerance, and auto-scaling in AWSCloudFormation.
- Created the **Docker containers** and **Docker consoles** for managing the application life cycle. Worked on creation of custom Docker Container images, tagging, pushing images, integration of **Spring Boot**.
- Developed **EJB** deployment descriptor using **XML** and used **JAXB** components for transferring the objects between the application and the database.
- **Log4J** was used to monitor the error logs and used **GIT** as version control tool.
- Developed test cases and performed unit testing using **JUNIT Test case**.
- Used **GIT** for version control and **Jenkins** for Continuous Integration and Continuous Deployment (CI/CD).
- Implemented **SOAP Services (JAX-WS)** to interact with external systems like Fidelity.
- Worked with **NoSQL** database like **MongoDB** installation, configuration and in designing MongoDB multi-shared cluster and monitoring with MMS.
- Designed database and created tables, written the complex **SQL** Queries and **stored procedures** as per the requirements.
- Involved in analysis, design, and Implementation applying the **agile methodology**.
- Involved in Unit integration, bug fixing, acceptance testing with test cases, Code reviews.

Environment: Java 11/8, spring, Spring Boot, Hibernate, DAO, MVC, Micro Services, REST, HTML5, CSS3, JavaScript, Angular 12, Angular.JS, Node.JS, JQuery, Docker, Jenkins, JMS, AWS, XML, EJB, Log4j, JUnit, Jenkins, MongoDB, SQL, Agile and Windows.

Role: Full Stack Developer

Responsibilities:

- Involved in various SDLC phases like Requirement gathering, Design, Analysis and Code development.
- Implemented **J2EE** standards, **MVC** architecture using **Spring Framework**.
- Used **Spring Framework** for Authentication and Authorization and ORM components to support Hibernate tool.
- Built **REST** web service by building **Spring Boot** in the back-end to handle the **Ajax** calls.
- Developed and designed application using **Spring Boot** to develop **Micro services**.
- Designed and developed **Micro Services** to divide application into business components using **Spring Boot**.
- Used **Micro Services** with **Spring Boot** services and combination of **REST, Apache Kafka message brokers**.
- Developed **DAO** objects and **Hibernate mappings**.
- Implemented **Hibernate** to persist the data into Database and wrote HQL based queries to implement CRUD operations on the data.
- Development of UI models using **Angular.JS, HTML5, JavaScript, AJAX, Web link** and **CSS3**.
- Created **single page application (SPA)** with loading multiple views using route services and adding more user experiences to make it more dynamic by using **Angular.JS** framework.
- Written **Typescript** classes to construct **Angular 10** Components.
- Built highly reusable UI components with **Angular 10** and Styled Components to increase scalability and reusability.
- Used **Node.JS** for building web applications with client-server architecture for two-way data exchange
- Used Java Messaging artifacts using **JMS** for sending out automated notification emails to respective users of the application.
- Deployed **EJB Components (EAR)** on WebLogic Application Server application server.
- Used **Log4J** for application logging and notification tracing mechanisms.
- Implemented **JUNIT** test cases for unit testing and Suites for end to end testing.
- Implemented **SOAP Services (JAX-WS)** to interact with external systems like Fidelity.
- Used to write **SQL queries, Triggers, Functions** for **Oracle database** and developed some complex **SQL queries**.
- Implemented the project under **Agile** Project Management Environment and followed **SCRUM** iterative incremental model & configured various sprints to execute.
- Actively participated and provided feedback in a constructive and insightful manner during weekly Iterative review meetings to track the progress for each iterative cycle and figure out the issues.

Environment: Java 8, spring, MVC, Spring Boot, Hibernate, Micro Services, REST, Eclipse, HTML5, CSS3, JavaScript, Angular 10, Angular.JS, XML, DOM, JMS, EJB, Log4j, JUnit, SOAP, SQL, Jenkins, Agile and Windows.

Client : DB Bank, West Palm Beach, FL

Jun 2018 – Jul 2019

Role: Java Developer

Responsibilities:

- Responsible for all stages of design, development and deployment of applications.
- Used **Spring MVC** Framework to implement **N-Tier** architecture.
- Created **Spring MVC** components like Dispatch Servlets, configure Request mapping annotation controllers, view resolver components.
- Used **spring framework** for middle tier and **Spring-hibernate** for data access.
- Developed **Data Access Layer** using **Hibernate ORM** framework.
- Involved in developing the persistence layer using **Hibernate** framework.
- Created Action classes and used **spring** related features like Validations and Action Messages.
- Developed various **DAOs** for handling business logic and data manipulations from database.
- Involved **java multithreading** to cascade multiple changes on multiple records in only one transaction and developed a batch process framework.
- Used **Core Java** OOPS concepts (inheritance, polymorphism) in developing the code.
- Used **log4j** to print the logging, debugging, warning, info statements.
- Implemented **JUNIT** test cases for unit testing and Suites for end to end testing.
- Involved coding **SQL Queries, Stored Procedures and Triggers**.
- Worked on **AGILE** methodology.
- Participated in the status meetings and status updating to the management team.

Environment: Java, spring, Hibernate, XML, DOM, Eclipse, EJB, Log4j, JUnit, SOAP, SQL and Windows.

Education Qualification:

Master's in Computer Science from Fitchburg State University.
