Professional Summary

Results-oriented Azure Cloud Engineer with **3 years** of experience in architecting, deploying, and managing scalable cloud solutions on Microsoft Azure. Adept at optimizing cloud infrastructure, enhancing security, and ensuring high availability. Over **12 years** of experience as Web Developer in software development, including .NET technologies, HTML, CSS, AJAX, BootStrap, MVC, Web API, to deliver seamless integration and high-performance systems.

Skills

Azure Cloud Computing skills:

Infrastructure Design: Virtual Networks, Subnets, Load Balancers, Network Security Groups (NSG), VPN Gateway, Azure Firewall, Azure Bastion, Azure DNS

CI/CD: Azure DevOps, Azure Pipelines, GIT, AgroCD, YAML

Azure Services: Azure SQL Database, Azure Storage

Containers & Orchestration: Docker, Azure Kubernetes Service (AKS), Azure Container Instances

Scripting: Powershell, Azure CLI, Bash

Infrastructure as Code: Terraform, ARM Templates, PowerShell, Azure CLI

Monitoring & Optimization: Azure Monitor, Azure Load Testing, Azure Application Insights, Azure Alerts, Azure Log Analytics

Security & Identity: Microsoft Entra ID (Azure AD), Role-Based Access Control (RBAC), Azure Key Vault

Configuration Management: Ansible

Version Control: GIT, GitHub, TFS

Database: SQL Server 2012

Tools: SQL Developer, Visual Studio 2017, 2020

Programming Language: C#, JavaScript, HTML5, CSS3, Angular 6, Bash, Node.js, Python, Powershell

Project Management: Agile Methodology

Server-side Frameworks: ASP.NET (3.5, 4.0), MVC, REST API, SOAP, Entity Framework

Client-side Framework: JavaScript, AJAX, XML, JQuery

Third Party Controls: Infragistics Controls, Active Reports, MultiTech FAX software, Authorize.Net

Operating System: Windows, Linux

Reporting: Active Reports, Crystal Reports, MS SQL Server Reporting Services (SSRS)

Responsive Web Design: Bootstrap

AWS Cloud Computing skills:

Strong Knowledge and Hands-on experience with AWS cloud services like EC2, S3, Lambda, RDS, ECR, ECS

Certifications

Azure Foundations AZ-900

Work History

Azure Cloud Engineer

07/2021 to Current

Kasmir Fabrics – Dallas, United States

- Designed and implemented scalable and resilient cloud solutions using Azure Networking Services (Vnets, Subnets, Application Gateway, Load Balancers, VMs, App Services, SQL Database)
- Worked on the migration of on-premises applications and databases to Azure, improving operational efficiency and scalability.
- Implemented a three-tier architecture CI using Azure Repos and CD using ArgoCD on Azure Kubernetes Service(AKS) as a proof of concept.
- Developed Infrastructure as Code (IaC) templates using Terraform. Utilized modular design principles to create reusable Terraform modules, improving efficiency and consistency across multiple environments. Implemented best practices for version control and documentation.
- Implemented end-to-end CI/CD Pipeline for infrastructure provisioning using Terraform and Azure DevOps.
- Developed a fully automated CI/CD pipeline using Git, Docker which pushes image to Azure Container Registry and deploys the image to Azure Container instance to streamline application deployments across multiple environments using Azure Devops tools.
- Implemented end-to-end CI/CD pipeline to deploy a web application using ARM templates and Azure Key Vault to store and manage secrets securely, and integrated the secrets into Azure DevOps pipeline.
- Created comprehensive documentation detailing the CI/CD process, including architecture diagrams, deployment workflows, and configuration steps. This documentation served as a reference for team members and ensured consistency in application deployment.
- Developed and maintained Infrastructure as Code (IaC) templates using ARM and Powershell scripts for repeatable and reliable cloud deployments.
- Integrated security practices into CI/CD pipelines to enhance the overall security posture of applications. Implemented secrets management solutions to securely handle sensitive information in pipelines.
- Developed custom scripts and tooling using PowerShell, Azure CLI.
- Created and maintained Ansible playbooks, uploaded roles to Ansible Galaxy for organizational sharing, and integrated existing roles, resulting in reduction in deployment time.
- Wrote python programs to get pull requests from GitHub repositories using API call, to update server resources in the server.conf file upon external notification and to deploy applications on remote servers.
- Wrote a Python API which listens on a github comment and creates a ticket in JIRA.
- Implemented and managed Microsoft Entra ID to streamline identity management and improve security protocols across the organization. Configured and maintained user identities, roles, and permissions, ensuring compliance with organizational policies.
- Monitored application running on kind cluster using Helm as package manager to install Prometheus and Grafana on kind clusters and created dashboards on Grafana.

- Created Azure DNS public zones and added alias record to provide a dynamic, automatically refreshing link between the zone apex and the load balancer.
- Implemented Azure Governance strategies, including the use of Azure Policy to enforce compliance and manage resources efficiently across multiple business units.
- Implemented a proof of concept project involving Azure Firewall and Azure Bastion to access the application running on a server.
- Gained hands-on experience with Microsoft Entra ID (formerly Azure Active Directory), managing identity and access management to enhance security and streamline user authentication processes.
- Deployed a Point-to-Site VPN solution to facilitate secure remote access for users, leveraging Azure VPN Gateway to ensure encrypted and reliable connectivity to Azure Virtual Networks.
- Ensured high availability and disaster recovery through the design and implementation of backup and failover solutions using Azure Recovery Services Vault and Azure Backup.
- Developed and executed load tests in Azure Load Testing to identify performance bottlenecks, providing insights to optimize system responsiveness and reliability.
- Developed and implemented comprehensive monitoring strategies using Azure Monitor and Azure Log Analytics and created alerts to ensure system performance and reliability.
- Conducted performance tuning and optimization of cloud resources, resulting in improvement in system performance and reliability.
- Hands on Experience working on projects and knowledge of AWS resources like EC2, S3, Lambda, ECR, ECS so on.

Senior Web Developer

01/2013 to 06/2021

Kasmir Fabrics – Dallas, United States

- Using Agile Methodology developed Dynamic New Design for the company's old website as per design team recommendations to enhance user interface and user experience using Visual Studio 2012 features to show the dynamic Menu with Submenus in the form of Navigation Bars using .Net Framework, CSS, HTML 5, AJAX, JavaScript and server-side coding using C#. Was involved from designing and execution to testing and release of the project.
- Reengineered the Product Finder page on the website using JQuery, AJAX and JavaScript to include add to favorites, add to cart, zoomed pop up on hover over the image and show all colors of the product feature.
- Took up the challenge of implementing a separate website for Vendors using MVC architecture in .Net Core to log in and enter their fabric information, contents, and specifications and certify them. On the success of this project implemented the same for the design and purchasing department to create purchase orders for new fabrics.
- Worked on getting rid of the third-party Infragistics controls that the site was using for their dropdowns and grids and replaced it with ASP.NET AJAX controls like combo box.
- Took the opportunity to learn and implement WEB API calls using SDK provided by the third-party software to integrate Credit Card Processing and ECheck Processing from the company's website.
- Implemented a Faxing Program to send Faxes using HTTP/XML communication between the FaxFinder Web Service (FFWS) and our application.
- Hands-on experience using JIRA, Confluence and other development tracking tools.

Kasmir Fabrics – Dallas, United States

- Resolved all the major issues with the calculation routines to fix the custom fabric styles for their popular products like Draperies, Pillows, Blankets, Comforters, Valences, etc. Hence helped improve their profitability.
- Resolved web order processing issues that the company was facing to process and send orders to Mainframe.
- Created clone functionality for web orders to be cloned and modified to speed up the ordering process for customers.
- Resolved all the issues with the Intranet site used to check on the status of the web orders as well as getting reports of all the web orders and Total Sales.
- Resolved issues with existing Sales Software which was installed on the Salesmen Laptop's to place orders as well sync their data into our database.
- Created Email Notification page to send email notification about the new collections , promotions, monthly statements, backorder and closeout alerts the company was providing from time to time.
- Created a dynamically scaling fabric pricing report based on the size of the book using Active Reports so that sales employees could print and paste it behind the book.
- Involved in system study and database engineering such as creating databases, Tables, Complex Stored Procedures, Functions, Views, Triggers.
- Built windows applications to send email blasts to customers about new sales employees and for price increase notifications.

Education

Bachelor of Science: Electrical Engineering Technology
Malnad College of Engineering ,Mysore University - India

06/2001
