

BONAVENTURE OROCK

Laurel, MD 20708

(240) 784-3133 | bonaventureorock@gmail.com

SUMMARY PROFESSIONAL:

- Cloud engineer with over 6 years of experience in designing, automating, and managing scalable infrastructure solutions across cloud and hybrid environments, enabling seamless application delivery and optimized system performance.
- Expertise in building and maintaining CI/CD pipelines using tools like Jenkins, GitHub Actions, Azure DevOps to streamline deployment processes, reduce manual interventions, and achieve zero-downtime releases in cloud-based systems.
- Proficient in Infrastructure as Code technologies such as Terraform, Ansible, and CloudFormation, enabling consistent and automated provisioning of cloud infrastructure across diverse environments.
- Skilled in containerization and orchestration using Docker and Kubernetes, ensuring high availability, rapid scalability, and resource optimization in cloud-native microservices architectures.
- Adept at implementing DevOps practices for monitoring and observability, utilizing Prometheus, Grafana, ELK Stack, and Azure Monitor to enhance cloud system visibility, reduce mean time to resolution (MTTR), and improve resilience.
- Demonstrates expertise in scripting and automation using PowerShell, and Bash, optimizing workflows to improve operational efficiency and resource utilization in complex cloud environments.
- Proven ability to collaborate across development, operations, and security teams in an Agile/Scrum setting, driving the adoption of DevOps methodologies and fostering continuous improvement in cloud operations.
- Experienced in configuring and managing secure cloud environments across major platforms (AWS and Azure), with strong proficiency in RBAC, IAM, and data security best practices to ensure compliance with industry standards.
- Recognized for DevOps expertise in cost optimization, resource management, and troubleshooting cloud infrastructure issues, delivering solutions that enhance uptime, reduce operational costs, and support business objectives.

TECHNICAL SKILLS:

DevOps Tools: Jenkins, GitHub Actions, Azure DevOps, Terraform, Ansible

Containerization & Orchestration: Docker, Kubernetes,

Programming/Scripting: Bash, PowerShell

Cloud Platforms: AWS, Azure (Azure VMs, AKS, App Services, Storage), GCP

Monitoring & Logging: Prometheus, Grafana, ELK Stack (Elasticsearch, Logstash, Kibana), Splunk, Azure Monitor

Version Control: Git, Bitbucket

Automation Frameworks: Selenium, Postman, Azure Automation

Networking & Security: VPN, vNets, ExpressRoute, RBAC, Load Balancers, Azure Policies

Virtualization: Hyper-V, VMware

Database Management: SQL Server, Azure SQL Database

Disaster Recovery & Backup: Azure Backup, Site Recovery, Data Recovery Solutions

Project Management Tools: JIRA, Confluence, Microsoft Project

Collaboration & Documentation: Microsoft Teams, SharePoint, Confluence

EMPLOYMENT HISTORY:

Praitech Inc, MD (Remote)
Sr. Cloud Engineer

03/2023 to Present

Responsibilities:

- Reduced cloud infrastructure costs by 30% through cost optimization strategies, including resource rightsizing, autoscaling policies, and implementing automated monitoring with tools like Prometheus and Grafana, ensuring adherence to DevOps best practices.
- Designed and implemented robust CI/CD pipelines using Jenkins and GitHub Actions, a cornerstone of DevOps workflows, enabling seamless integration, testing, and deployment across multiple environments with zero-downtime releases.
- Migrated over 50 SQL Server databases to Azure SQL Database and AWS RDS, a DevOps-driven approach that achieved a 25% boost in query performance and reduced operational overhead by 40% with automated backup and disaster recovery plans.
- Strengthening infrastructure security by configuring IAM roles, RBAC, TLS encryption, and automating compliance checks with Hashi Corp Sentinel and Azure Policies, integrating security into the DevOps lifecycle and reducing security incidents by 30%.
- Automated infrastructure provisioning using Terraform and Ansible, critical DevOps tools, improving deployment speed by 50% and ensuring consistent environment configurations across staging and production environments.
- Collaborated with cross-functional teams to implement DevOps methodologies, including blue-green deployments and canary releases, minimizing deployment risks and improving overall system uptime.
- Architected hybrid cloud networking solutions, including vNets, ExpressRoute, VPNs, and Cisco FTDv firewalls, as part of a DevOps-focused approach to maintain secure and optimized connectivity between on-premises and cloud environments.
- Documented technical processes, created standard operating procedures (SOPs), and facilitated knowledge sharing across DevOps teams, enhancing operational consistency and reducing onboarding time by 30%.

Pathpresenter– DC
Cloud DevOps Engineer

08/2021 to 03/2023

Responsibilities:

- Automated over 30 CI/CD pipelines using Jenkins, Azure DevOps, and GitHub Actions, reducing deployment times by 50% and enabling weekly release cycles with zero-downtime deployments, a critical aspect of modern DevOps workflows.
- Provisioned and managed 100+ cloud infrastructure resources, including virtual machines, networks, and storage, using Terraform and Ansible, achieving an 80% reduction in manual provisioning efforts while aligning with DevOps automation standards.
- Developed and deployed 50+ automation scripts with PowerShell, and Bash, optimizing resource scaling, patching, and backup operations, saving 15 hours weekly and enhancing operational efficiency in hybrid cloud environments.
- Optimized network performance and connectivity by configuring advanced networking solutions such as CIDR, subnetting, VLSM, BGP, and MPLS, ensuring efficient data flow and resource accessibility across cloud and on-premises systems.
- Designed and implemented 30+ automation runbooks using Azure Automation and AWS Lambda, enabling self-healing systems and auto-scaling services, key features of DevOps methodologies, and reducing incident resolution times by 25%.
- Managed infrastructure configuration for 200+ virtual machines using Infrastructure as Code (IaC) principles and tools like Terraform and Azure Automation DSC, ensuring 100% policy compliance and consistent environments across multi-cloud deployments.

- Developed secure networking configurations in AWS, including VPCs, subnets, and security groups, to support a range of enterprise applications.
- Monitored system health and resolved critical incidents using Prometheus, Grafana, and the ELK Stack, ensuring 99.9% service uptime while adhering to DevOps observability best practices in cloud infrastructure management.
- Collaborated with cross-functional teams to deploy, test, and troubleshoot cloud services across hybrid and multi-cloud environments, achieving seamless integration and optimal performance with DevOps pipelines.
- Established robust security measures, including IAM policies, RBAC, and TLS encryption, embedding security into the DevOps lifecycle and ensuring compliance with industry standards in complex cloud infrastructures.

TriTech – MD
System Cloud Administrator

09/2019 to 08/2021

Responsibilities:

- Managed AWS cloud infrastructure for over 50 critical applications, ensuring high availability and scalability, reduced downtime by 30%.
- Implemented monitoring and alerting solutions using AWS CloudWatch and third-party tools, enabling proactive management of system health and performance.
- Deployed and managed 5+ Kubernetes clusters in a cloud environment, supporting 500+ microservices with seamless scaling during peak demand periods, a core DevOps approach for containerized workflows.
- Created Infrastructure as Code (IaC) templates using AWS CloudFormation, facilitating consistency and repeatable deployments across different environments.
- Configured Azure Blob Storage for 500 TB of data, enhancing performance for 10+ million transactions daily and implementing cost-saving measures that reduced cloud storage costs by 15%.
- Configured and monitored cloud-based storage solutions and databases, including AWS S3, EC2, and RDS, to support data integrity and accessibility.
- Automated CI/CD pipelines using Jenkins and AWS Code Pipeline, increasing deployment efficiency by 40% and reducing manual intervention.
- Guided cloud migration projects, transitioning on-premises applications to AWS cloud infrastructure and ensuring smooth and efficient processes.

EDUCATION

Bachelor of Science in Computer Science
 Polytechnic, Bambui – 07/2016

CERTIFICATIONS

- CompTIA Security+
- Microsoft Certified: Azure Fundamentals (AZ-900)
- Microsoft Certified: Azure Administrator Associate (AZ-104)
