## Application Engineer

---

### Summary

I am currently working as an Application Engineer installing and supporting global labeling systems. I troubleshoot and work within a variety of environments to ensure that the global labeling system is installed and working to the customer's expectations. I work with Windows Server environments, Networking, Active Directory, SQL, and scripting on a daily basis. I'm constantly learning and trying to broaden my knowledge within the IT industry.

**TECHNICAL SKILLS:** Windows Server 2012-2019, Microsoft Office 365, Active Directory, Microsoft SQL 2012-2019, VMware, Server Backup/Recovery, SSL Certificates, IIS, Batch Scripting, PowerShell, AS400, , Citrix, Network routing and troubleshooting, server load balancing, SaaS installations and troubleshooting.

## Professional Experience

---

**Network Partners – Consulting firm for Medical Device companies that offered services from Compliance to Medical Device packaging and labeling.**

### ***Application Engineer, 04/2021–Present***

- Install and supporting global labeling systems.
- Troubleshoot and work within a variety of environments to ensure that the global labeling system is installed and working to the customer's expectations.
- Work within windows server environments, networking, active directory, SQL, and scripting
- Develop and provide QA documentation for customers
- Install and configure IIS, as well as install IIS certificates for web based labeling software.
- Batch scripting used to help automate the process of global labeling software installation.
- Technical skills utilized: Windows Server, SQL, SSL Certificates, IIS, SaaS installations and troubleshooting

**Jack Henry – Provided banking core and software solutions for every aspect of banking.**

### ***Application Engineer, 04/2017–04/2021***

- Analyze the customer's existing products/processes and consult with customer to map existing system to the product.
- Installed and configured Enterprise Content Management software, document control software, as well as E-signature software for Banks as well as Credit Unions.
- Prepare the customer for the installation, takes the customer through the installation process, and provides training or support to the customer post-installation.
- Oversee/perform system set-up for customer (i.e., parameter set-up, creates job files for processing, etc). Ensures related business processes will run on software.
- Provide software support/guidance by answering questions on function, features and usage of software products. Support may be at the customer site or remote.
- Communicate the customer's needs/expectations with programmers, other team members, and team leader. Maintain effective communication with customer throughout entire project/case.
- Identify/maintain customer issues and ensure proper resolution. Maintains customer issue list by application and ensures all are forwarded to the appropriate personnel for resolution.
- Prepare training materials and documentation for customers and internal users.
- Set up Windows Servers to the specifications and requirements per the Synergy software. Had to set up specific drives, appropriate the

correct amount of RAM, as well as perform server hardening.

- Installed and supported an internal application called Synergy, deployed on both individual pc's as well as on the server. Installed and configure SQL in order to be used per the specifications and requirements of Synergy. Handled the database permissions that were required within SQL. Set up backup and recovery plans for the database.
- Set up load balancing for the Synergy servers. This was not a feature when I first started but I was apart of the testing and configuration of load balancing for the servers that ran Synergy.
- Installed and configured IIS per the specifications and requirements for the Synergy software.
- Issued SSL certificates, installed and configured those SSL Certificates for the Synergy servers required for the setup.
- SaaS and SSO integrations
- Wrote and troubleshot batch scripts that allowed for some of the installation process of Synergy to be automated.
- Installed and troubleshot SaaS environments for customers. One of our offerings were SaaS. I would have to install the software and navigate permission issues, networking issues, as well as anti-virus and security issues preventing either installation or functionality of our software.
- Setup and integrated banking cores to work with the Synergy software. This involved either using AS400 or using a Windows Server based banking core that required using command line to setup.
- Technical skills utilized: Windows Server 2012-2019, Microsoft Office 365, Active Directory, Microsoft SQL 2012-2019, VMware, Server Backup/Recovery, SSL Certificates, IIS, Batch Scripting, PowerShell, AS400, Network routing and troubleshooting, server load balancing, SaaS installations and troubleshooting.

## **City of Springfield, Missouri**

### ***Computer Technician, 01/2015–04/2017***

- Provided excellent customer support, both over the phone and face to face, to over 2,000 city employee's spread over as many systems and devices
- Built an imaging server that utilized SCCM in order to build computers with a custom image designed for City employees.
- Install/manage around 200 different pieces of software for different departments of the City
- Troubleshooting any and all issues that city employees have with their computers, printers, software, or network connections.
- Manage and prioritize tickets assigned in my queue in order to ensure the fastest possible service for every employee.
- Managed Citrix servers that housed software utilized by the City employees. We used Citrix workspace for our applications.
- Created and managed users within active directory, to ensure they were in the right organization units and had the proper permissions on their computers and software.
- Technical skills utilized: Windows Server 2012-2014, Active Directory, Citrix, network troubleshooting, VMware

## **T-Mobile**

### ***Technical Support Specialist, 06/2010–01/2015***

- Provide technical support over the phone for customers having issues with their phones.
- Problems including: networking issues, hardware issues, software problems, user issues, and overall usage of the customer's phone.
- Multitasking within different systems in order to find the right solution to each customers problems and solving adjacent issues while building rapport and providing excellent customer service.
- Keeping up with performance goals and performing within the top representatives in the site.

## Education

---

**Ozarks Technical Community College**

***Associate of Arts and Sciences (A.A.S.), Networking, 2012–2015***

**Evangel University**

***Bachelor's Degree, Psychology, 2004–2008***
