

Brijesh Kumar Verma Software Developer

| brijeshkumarv29@gmail.com | +1(315)-728-0006 | <https://www.linkedin.com/in/brverma/> | <https://github.com/brverma7> |

Summary

Result Driven Software Developer with 5+ years of experience in designing and delivering scalable software solutions. Proficient in developing backend systems using Java, Spring Boot, and Node.js, and creating Responsive frontends with React and Angular. Skilled in deploying cloud-native applications on Azure and AWS, utilizing CI/CD pipelines and containerization to enhance scalability. Led cross-functional teams to resolve critical issues, preventing over \$250,000 in monthly losses, and driving cost savings through effective solution architecture. Experienced in agile methodologies, managing sprints, and mentoring teams to deliver impactful results.

Technical Skills

Programming Languages & Frameworks: Java / J2EE, Python, JavaScript (ES6+), TypeScript, C++, PL/SQL, Spring Boot

Database Management: PostgreSQL Oracle DB, MySQL, MongoDB, Redis

Cloud Platforms & DevOps: AWS (S3, EC2, RDS, Lambda, CloudWatch), Azure, Docker, Kubernetes, Jenkins, GitHub Actions

Frontend & UI/UX Development: HTML5, CSS3, React.js, Angular, Bootstrap, Tailwind, Material UI

Tools & Libraries: Hibernate, JDBC, Node.js, Express.js, OAuth 2.0, JWT, OpenID, Maven, Nginx, Tomcat

API Development & Integration: REST, SOAP, GraphQL, JSON, XML, Swagger

Version Control Systems: Git, GitHub, Bitbucket

Software Testing & Debugging: JUnit, Jest, Mocha, Mockito, SonarQube, Postman

Agile & Project Management: JIRA, Trello, Scrum, Kanban, Performance Optimization: Algorithm efficiency, Data structures, Design Patterns

Professional Experience

Software Developer , Oracle

Jan 2024 – Present | Remote, USA

- Led Network Simplification project, crafting a React app with D3.js to visualize network topology featuring pan, zoom, and drag and-drop capabilities, earning 98% stakeholder satisfaction
- Engineered microservices with Spring Boot, Apache Kafka, and REST APIs, enabling integration between distributed systems, on-premises systems and Oracle Cloud, driving a 30% improvement in system efficiency
- Directed the transformation of monolithic applications into microservices architecture, resulting in a 40% reduction in system downtime and providing boosted scalability and maintainability for future growth.
- Designed a chatbot using Oracle Digital Assistant (ODA) with React, integrating Oracle NLP, QnA, and OCI Integration for seamless communication, achieving 95% intent recognition accuracy and improved response efficiency
- Automated testing processes using tools like Selenium and JUnit, increasing test coverage to 95% and reducing post-release defects by 20%
- Authored detailed technical documentation and knowledge transfer guides using Confluence, ensuring smooth onboarding and knowledge retention across development teams.

Software Developer, LTIMindtree

May 2018 – Aug 2022 | India

- Collaborated with 8+ Agile teams to design and deliver two scalable insurance web applications, optimizing workflows and supporting operational needs across four business units.
- Supervised and mentored a team of 5 engineers, managing code reviews, feature development, and technical training to deliver high-quality software projects on schedule.
- Modernized 60+ SOAP services, transitioning them to Java RESTful Web Services with Gravitee.io API Gateway for streamlined API management and integrated IBM MQ, enhancing system performance by 35%.
- Deployed centralized IAM solutions by implementing Keycloak SSO with LDAP-based Azure AD, automating user federation for 1,200+ users and ensuring secure, seamless authentication.
- Performed legacy system modernization through Jenkins, Docker, Kubernetes, and CI/CD pipelines, reducing operational costs by 20% and supporting cloud migration objectives.
- Developed SQL procedures and Node.js scripts for ETL processes, transforming large datasets into audit-compliant Excel reports on AWS S3, reducing preparation time by 75%.
- Upgraded backend performance by refactoring legacy code and enhancing database queries, resulting in a 25% reduction in application load times and refined user experience.
- Constructed an advanced cloud migration planning tool using Node.js and React and NoSQL Database(MongoDB) , improving cloud migration efficiency by 45% through comprehensive infrastructure analysis.

Certifications

- Microsoft Azure Fundamentals (AZ-900)
- Scaled Agile Certified Safe 5 Practitioner
- Microsoft Azure DevOps Solutions (AZ-400)

Education

Syracuse University

Master of Science in Computer Engineering

Aug 2022 – May 2024 | New York, USA

Mumbai University

Bachelor of Engineering in Electronics and communication

Aug 2015 – May 2019 | Mumbai, India
