

Bryan Thomas Carter

Manor, TX | +1 737 239-8480 | bryan.carter.net@gmail.com |

Summary

Senior Full Stack Engineer with over **10** years of experience designing and delivering high-performance web and mobile applications using **C#, .NET, ASP.NET**, and **Angular**. Expert in building scalable, maintainable solutions with a strong focus on **REST APIs, Microservices, .NET Core, Blazor, LINQ, TypeScript, JQuery** and **SQL/NoSQL** databases. Proven track record of successfully leading cross-functional teams, optimizing application performance, and implementing robust security measures. Highly skilled in managing the full software development lifecycle, from architecture to deployment, using modern **DevOps practices** and cloud platforms like **Azure** and **AWS**. Adept at mentoring junior developers, conducting code reviews, and driving continuous improvement initiatives to ensure delivery of high-quality software. Passionate about adopting new technologies and methodologies to create innovative solutions.

Education

Texas tech university, Lubbock, TX

September 2010 - May 2014

Bachelor's Degree in Computer science

Skills & Abilities

- **Languages:** C#, C/C++, TypeScript, JQuery, JavaScript
- **Backend Frameworks:** ASP.NET, .NET Core, VB.NET, .NET MVC, Apache, ADO.NET
- **Frontend:** Blazor, NgRx, RxJs, Angular, Bootstrap, TailwindCSS
- **Paradigms:** Microservices, OOP, SOLID Principles, MVC & MVVM Software Architecture
- **API Development:** RESTful APIs, GraphQL, Swagger, Postman, API Gateway, HTTP/SSL/TLS
- **Storage & Databases:** CosmosDB, Entity Framework, Stored Procedures, MS SQL, SQL Server, SSIS, LINQ, MongoDB, T-SQL
- **Cloud:** Microsoft Azure (Azure App Services, Azure Functions, Azure Kubernetes Service), AWS (EC2, S3, Lambda)
- **DevOps:** Docker, GitLab CI/CD, Jenkins, Kubernetes, Azure DevOps, GitOps
- **Version Control Systems:** Git, Bitbucket
- **Testing & Quality Assurance:** NUnit, xUnit, MSTest, Moq, Jest, Cypress
- **Familiar With:** ServiceNow, MS SharePoint, Jira, XSD, XSLT, Progressive Web Apps, Nginx, Web Scraping, XML, OAuth, JWT, SOAP, Microsoft Access

Experience

SENIOR SOFTWARE ENGINEER | RIVELL | MARCH 2022 – PRESENT

- Led the backend development of a high-performance payment processing platform using **.NET Core**, achieving a 15% improvement in transaction speeds by optimizing core business logic and data flow.
- Designed and built efficient backend services with **C#** and **.NET Core**, implementing complex business logic, data processing features, and enhancing overall application performance.

- Developed and maintained **RESTful APIs** with **ASP.NET Core**, optimizing communication between **microservices** and ensuring scalability in high-traffic environments.
- Utilized **Entity Framework Core** for efficient data access, reducing latency and significantly improving system performance, especially during peak usage.
- Implemented **OAuth 2.0** and **JWT** for secure **API authentication**, ensuring a **robust** and secure environment for both users and services.
- Leveraged **Azure App Services** and **Azure Functions** to create **cloud-native solutions** that automatically scale in response to demand, optimizing resource management and uptime.
- Managed **SQL Server databases**, writing complex stored procedures and fine-tuning **T-SQL** queries for faster data retrieval and reduced load on backend systems.
- Led the migration of legacy applications from **.NET Framework** to **.NET 6**, improving the maintainability, performance, and long-term scalability of core systems.
- Automated build and release pipelines with **Azure DevOps**, streamlining deployment processes and reducing the need for manual intervention, which improved deployment consistency.
- Integrated **SignalR** into the backend to enable real-time communication between **microservices** and **frontend applications**, enhancing the user experience with live data updates.
- Optimized **SQL queries** and indexes to improve database performance, reducing overhead and ensuring system responsiveness during high-traffic periods.
- Introduced **Redis** caching in **.NET Core** to reduce database load and improve **API response times**, particularly for high-demand data requests.
- Architected and deployed cloud solutions using **Azure Functions**, **App Services**, and **Azure SQL Database**, enabling scalable, **serverless** architectures with seamless integration with **Entity Framework Core**.
- Designed and implemented **CI/CD pipelines** with **Azure DevOps**, automating the deployment of backend services, reducing errors, and accelerating feature releases.
- Managed **Azure SQL** Database instances for high-availability and secure data storage, ensuring redundancy and seamless integration with the backend system.
- Led code reviews and provided mentorship to junior developers, emphasizing best practices in **.NET Core**, **cloud solutions**, and **API security**, ensuring **high-quality code** and **team growth**.
- Worked with cross-functional teams in **Agile ceremonies**, delivering features on time while collaborating on architectural decisions and prioritizing backend scalability.
- Created detailed documentation of architectural decisions, deployment workflows, and backend testing strategies, improving team alignment and knowledge sharing.
- On the frontend, developed a modern, responsive **UI** using **Angular** and **TailwindCSS**, ensuring an intuitive experience across all devices and enhancing the overall application usability.
- Managed state and side effects in **Angular** using **NgRx** and **RxJS**, ensuring a highly responsive and scalable frontend that integrated seamlessly with the **.NET Core backend**.
- Integrated **secure JWT-based authentication** on the frontend, aligning with backend security standards and ensuring a unified authentication flow across the application.
- Collaborated closely with backend teams to integrate the **.NET Core APIs** with the **Angular frontend**, ensuring smooth data flow and real-time interactions using **SignalR**.
- Created modular, reusable **Angular** components, enabling easier maintenance and faster feature delivery while ensuring consistency across the UI.
- Worked with the security team to ensure the frontend was properly secured, including **HTTPS** and implementing secure token storage strategies to safeguard user data.
- Designed and set up automated frontend testing workflows using **Cypress** and **Jest**, ensuring a bug-free and functional UI across multiple environments.

FULL STACK ENGINEER | HEALTHIFY | NEW YORK | JUNE 2018 – FEB 2022

- Worked on developing and maintaining a healthcare platform using **.NET Core** for backend services and **Angular** for the frontend, contributing to an improved user experience and system reliability.

- Built and maintained **RESTful APIs** with **ASP.NET Core**, ensuring smooth communication between the backend and the frontend, helping to deliver features quickly and reliably.
- Optimized backend performance by refining **SQL Server** queries and using **Entity Framework Core** for more efficient data access, which improved response times for users.
- Implemented secure user authentication with **JWT** and **OAuth**, which enhanced the platform's security and made sure we met compliance standards.
- Helped transition parts of the platform to **Azure App Services**, making the app more scalable and cost-effective, though the focus was still on solid backend development.
- Collaborated closely with the frontend team to integrate **Angular** with backend services, ensuring that the user experience was seamless and data was accurately displayed.
- Developed reusable **Angular** components that improved consistency across the platform and allowed for faster implementation of new features.
- Played a role in integrating basic **SignalR** functionality for live notifications, allowing users to receive real-time updates, which was especially important for patient-provider communication.
- Wrote unit tests for both backend services using **xUnit** and frontend components with **Jest**, helping to ensure that the system was stable and minimizing bugs.
- Assisted in setting up **CI/CD pipelines** with **Azure DevOps**, streamlining the testing and deployment process, and enabling faster, more reliable releases.
- Participated in regular code reviews with the team, sharing feedback and ensuring that both frontend and backend code met high standards for readability and performance.
- Worked alongside my team to troubleshoot and debug issues, learning how to balance fixing urgent bugs with maintaining the stability of the platform.
- Gained valuable experience with **Azure**, deploying parts of the application to the cloud, but continued to focus primarily on backend development with **.NET Core**.
- Contributed to migrating the database to **Azure SQL**, which improved scalability during periods of high traffic and enhanced the platform's performance.
- Assisted junior developers in understanding **.NET Core** and **Angular**, helping them adopt best practices for writing clean and efficient code while fostering a collaborative learning environment.

SOFTWARE DEVELOPER | BENTOBBOX | AUGUST 2014 – JAN 2018

- Started my career by assisting in the development of web applications using **ASP.NET** and **C#**, which laid the foundation for my backend development skills.
- Contributed to building and maintaining **RESTful APIs**, where I learned how the backend and frontend interact and gained a deeper understanding of API architecture.
- Worked closely with senior developers, writing clean and efficient **C#** code, and learning how to structure applications for better performance and scalability.
- Gained hands-on experience with **SQL Server**, writing queries and working on database optimization, which helped me understand the importance of data management in application development.
- Assisted with frontend tasks, using **JavaScript** and **Bootstrap** to create simple UI components, learning how to make websites responsive and **user-friendly**.
- Participated in code reviews, where I received constructive feedback on my code, helping me improve my programming practices and understand **SOLID principles** for better maintainability.
- Helped troubleshoot bugs and resolve issues in the system, learning how to approach problem-solving and effectively use debugging tools.
- Wrote unit tests using **MSTest**, which helped me develop an appreciation for testing and ensuring that the code was stable before deployment.
- Worked with the team in an **Agile** environment, learning how to break down tasks, estimate effort, and track progress in **Jira**, which helped me become more organized and efficient.
- Gained exposure to **CI/CD** practices, assisting in setting up automated builds and deployments, which gave me a solid understanding of modern development workflows.
