Peyton MELTON

Lead Ruby on Rails & React Developer

A seasoned Senior Ruby on Rails Developer with extensive expertise in building scalable, high-performance web applications. Proficient in Ruby on Rails, with a strong background in using RSpec for robust testing and Sidekiq for efficient background job processing. Experienced in modern front-end development using React and Stimulus for dynamic and interactive user interfaces. Adept at deploying and managing applications on AWS, ensuring secure, reliable, and scalable cloud infrastructure.

Education

● Bachelor's Degree in Computer Science

From September 2014 to September 2018 [Lamar University](#) Texas

Work experience

● Lead Ruby on Rails Developer

From February 2022 to October 2024 [WillowTree](#) United States

I worked on the MVP and final product for an education startup that attracted 5K customers in the first month. I also worked on Rails migration and performance optimization for a large legacy web app at a healthcare company, resulting in a 40% boost in Rails app performance and API response times.

- Responsible for setting up and configuring automated deployment and scaling infrastructure on Amazon using EC2, S3, Route53, Elastic Load Balancer, and Virtual Private Cloud with Ubuntu and RHEL.
- Involved in the frontend solution using React, Relay, and GraphQL and led the UX and design outsourced teams helping with product ideation to creation.
- Involved in designing a notification data pipeline using Kafka to trigger payload information.
- Involved in the design and development phases of the application using Ruby, Rails (5, 6, 7) framework, and Ruby mine IDE.
- Designed user Interface for the website with ERB, jQuery, RJS, Aiyana, Ajax for View, Controller, Model in Aiyana on Rails Framework.
- Integrated AWS DynamoDB using AWS Lambda to store the values of the items and back up the DynamoDB streams.
- Developed and tested many features in an agile environment using Ruby on Rails, HTML, CSS JavaScript, Bootstrap, and RSpec.
- Worked in the design and development phases as lead of the application using the ROR framework.
- Used Rails, AJAX, JSON, CSS, and JQUERY to design the front end of the application. The back end of the application is developed mainly using Active Records.
- Responsible for handling sensitive medical data using technologies such as Ruby on Rails, PostgreSQL, GraphQL, Amazon Web Services, and more.
- Designed and developed microservices architecture for eCommerce applications using Ruby on Rails.
- Used RSpec to create test-driven development. Experience with all of the gems and libraries for this version of the ruby on rails.
- Implemented and enhanced CRUD operations for the applications using the MVC (Model View Controller) architecture of Rails framework and Ruby conducting code reviews.
- Developed Ruby on Rails web applications using Rails 5, MongoDB and background processes using Resque and Redis.
- Designed, developed, deployed, and maintained a high-flexibility backend and GraphQL API.
- Developed user interface for a website with ERB, RJS, and Ruby for the view, controller, and model in Ruby on Rails framework on the OS X operating system.
- Implemented security measures, such as input validation, authentication, and authorization, to prevent common attacks such as SQL injection and cross-site scripting (XSS).
- Designed the frontend of the application using Rails, AJAX, JSON, CSS, jQuery, and back end was developed by ActiveRecord.
- Skilled in utilizing authentication and authorization frameworks, such as Devise or OAuth, to implement secure user management and access control in SaaS applications.
- Worked on setting up and managing distributed task queues and workers, allowing for the parallel execution of computationally intensive or time-consuming tasks.
- Developed website using Ruby on Rails, backed by PostgreSQL and Capistrano to automate and ease the deployment process on Phusion Passenger server.

Technologies: Ruby on Rails, React.js, Stimulus, Turbo, WebRTC, CSS, HTML, Capybara, RSpec, Sidekiq, AWS, Firebase, Docker, Kubernetes, jQuery, Kafka, Cassandra

Work experience

Senior Ruby on Rails Developer

From September 2019 to December 2021 [Rally Health](#) United States

I contributed to the development of a Rails application focused on health plan management, a customized patient onboarding flow, cost-effective care solutions, and personalized, data-driven healthcare recommendations.

- Reviewed user requirements, analyzed, designed, implemented, installed, and delivered training for new applications.
- Orchestrated efficient large-scale software deployments.
- Monitored ongoing operation of assigned programs and responded to problems by diagnosing and correcting logic and coding errors.
- Consulted regularly with internal customers on application development project status, new project proposals, and software-related technical issues.
- Troubleshoot the legacy and new systems to maintain data hygiene and assist in troubleshooting issues across Development, Test, and Production environments.
- Created a GraphQL API on top of Ruby on Rails to give front-end developers the flexibility to fetch exactly the data they need.
- Developed a robust application recognition software using Ruby, ImageMagick, and Tesseract.
- Transitioned the outdated front end to a modern stack using Webpack, TypeScript, and React. Constructed solutions to solve business requirements efficiently.
- Proposed and led data schema changes that improved the product with minimum effort, eliminating tech debts.
- Led the engineering effort of developing a new product.
- Interacted with the business team and gathered requirements.
- Implemented RESTful authentication plug-in for authentication and login system.
- Built input validations using Rails validation functions.
- Followed agile software development methodology and scrum.
- Involved in implementing user mailing modules using ActionMailer.
- Designed the SQL server database, and wrote stored procedures and triggers for effective data processing and performance.
- Used and implemented design patterns namely Observer, Singleton, and Factory.
- Involved in leveraging Ruby gems such as Masonry-Rails, Uglifier, Bootstrap-sass, and jQuery-Ui-Rails.
- Utilized containerization technologies (e.g., Docker) and container orchestration platforms (e.g., Kubernetes) to deploy and manage microservices in a scalable and resilient manner.
- Designed and implemented Intranet applications using Ruby on Rails and PostgreSQL on Heroku cloud packages and Triggers on databases like MySQL, PostgreSQL, and Oracle.
- Skilled in utilizing NoSQL query languages and APIs, such as MongoDB Query Language (MQL), to interact with and manipulate data in NoSQL databases.
- Worked on Unix-based operating systems, such as Linux and macOS, for developing Ruby on Rails applications.
- Designed the frontend application using Ruby 2.2.2, Rails 4.2.3, CSS3, AJAX and jQuery and developed and implemented products and services page using Ruby on Rails, MySQL and MongoDB.
- Implemented Unit Testing and Test-Driven Development (TDD) using Rspec strategies and implemented projects builds framework using Jenkins & Maven as build framework tools.
- Implemented the Query part of the reports using Ruby, ORM Active Records and ran the rake tasks for every report weekly, dumping the SQL data to CSV file.
- Developed ROR web applications using MongoDB and background processes using Resque and Redis.
- Worked with all the RVM, Bundler, GEMS, and libraries for this version of the ruby/rails such as CanCanCan, Devise, foreman, jQuery, Kaminari, Coffee Script, Factory Girl, Robocop, and Capybara.
- Developed the application using Ruby on Rails framework, Active Record, YAML, HAML, RHTML.
- Worked with gems involved in the development of an application such as Bundler, Rails, Rake.
- Used Rspec and Cucumber to create Test Driven Development (TDD) and Experience with all the RVM, GEMS, and libraries for this version of Ruby.

Technologies: Ruby on Rails (RoR), React.js, Redux, JavaScript, GCP, Heroku, SEO, Metaprogramming

Work experience

● Ruby Developer

From November 2018 to May 2019 [DesignBro](#) Netherlands

DesignBro is an online graphic design marketplace that only allows the very best designers to join and work with clients.

- Leveraged Sidekiq for job processing and scheduling.
- Wrote RSpec test cases as part of my development workflow to ensure robust and stable code. Built concrete Ruby on Rails APIs.
- Developed and implemented a strategy for migrating the front-end codebase to React additively.
- Designed and implemented NoSQL solutions based on an in-house framework.
- Wrote functional, unit and integration tests for application quality assurance.
- Used version control tool Git and code storage tool Github for added application functionality. Completed database migrations with Ruby and Rails and ActiveRecord.
- Built bespoke application credit card forms and assure payment reliability with Stripe API.
- Integrated email functionality in application by using Sendgrid.
- Worked in an integrated development environment based in the cloud.
- Utilized Devise to optimize application functionality.
- Completed Rails stack, including admin feature, log in/log out and signup at first.
- Constructed authentication systems with Rails stack from the ground up.

Technologies: Ruby on Rails (RoR), React.js, PostgreSQL, AWS, Bootstrap, GraphQL
