

Chaitanya Maniveer Ganesh Jana

FULL STACK DEVELOPER

Email ID: jana.chaitanya0302@gmail.com | Phone No: +1 (908) 382-6682

Location: Morrisville, NC, USA | [LinkedIn](#)

SUMMARY

- Full Stack Developer with 4 years of experience in developing robust applications for fintech and healthcare sectors.
- Expertise in Java, Spring Boot, and React/Angular for full-stack development, with a proven track record of optimizing system performance and enhancing user experience.
- Proficient in designing and implementing microservices architectures, resulting in significant improvements in processing times and system scalability.
- Strong experience with AWS services including EC2, S3, and Lambda, for building efficient and cost-effective cloud-based solutions.
- Skilled in database management and optimization, working with MySQL, MongoDB, and implementing ORM technologies like Hibernate to enhance query performance.
- Adept at developing and integrating RESTful APIs, improving system interoperability and facilitating seamless data exchange between components.
- Strong background in data processing and analysis, utilizing technologies like Kafka for real-time data streaming and implementing machine learning models for predictive analytics.
- Experienced in Agile methodologies, CI/CD practices, and DevOps tools such as Jenkins, Docker, and Kubernetes for streamlined development and deployment processes.

TECHNICAL SKILLS

Front-End Technologies:	HTML5, CSS3, Bootstrap, UI Material, JavaScript, Typescript, ES6, React JS, Redux, Angular
Back-End Technologies:	Core Java, Java 8, C++, Spring Boot, Spring MVC, Web Services, RESTful API, Microservices, Hibernate ORM, Streams, Lambda Functions
J2EETechnologies:	Servlets, JSP, JDBC, JMS, Maven, Multi-threading
IDEs:	Visual Studio Code, IntelliJ IDEA, Eclipse, Maven, Gradle, NetBeans
Web Services:	RESTful, SOAP
Databases:	SQL, MongoDB (NoSQL), PostgreSQL, MySQL, Oracle
CI/CD & Tools:	Jenkins, Code Ship
Testing tools:	JUnit, Mockito, React Testing Library, Jest
Cloud & Deployment:	AWS, Docker
Web Server:	Apache Tomcat, WebLogic
Other:	Agile, Jira, SVN, Ant, Git, Scrum, GitHub, Kubernetes, Bitbucket, Swagger Open API, SonarQube, POSTman
Operating System:	Windows, LINUX, Mac OS

EXPERIENCE

Full Stack Developer | Wells Fargo, NC, USA

Jan 2024 – Present

- Designed and implemented backend services using **Java and Spring Boot** to develop **RESTful APIs** for managing customer accounts, transactions, loan applications, and investment profiles. Leveraged Spring Boot's features for scalable, secure, and maintainable service architecture in a financial ecosystem.
- Developed the user interface for the Customer Banking Portal using **Angular**, contributing to **10%** of system functionality. Created responsive dashboards and user-friendly workflows for customers, advisors, and account managers with real-time API integration for seamless data updates.
- Architected the platform using **microservices architecture**, creating independent modules like Account Service, Transaction Service, Loan Service, and Notification Service. This ensured scalability, improved modularity, and simplified system maintenance for a high-volume financial application.
- Utilized **MongoDB** to store semi-structured financial documents such as loan histories, credit evaluations, and customer financial profiles, contributing to **3%** of the data infrastructure and allowing dynamic adaptation to regulatory and business changes.

- Secured data in transit using **SSL/TLS encryption** across all layers—frontend, backend, and database—to protect sensitive financial information including transaction details and customer identities, ensuring compliance with **PCI DSS** and internal security standards.
- Stored sensitive customer documents such as KYC forms, financial statements, and investment reports in **AWS S3**, contributing to **15%** of cloud storage architecture, ensuring scalable, encrypted, and access-controlled document handling.
- Implemented **Apache Kafka** for an event-driven architecture that enabled asynchronous communication between microservices such as account updates, fraud alerts, and transaction logging, contributing to **5%** of the system's scalability and resilience.
- Integrated **JUnit** for unit testing and Selenium for UI testing within a **CI/CD pipeline** (Jenkins), enabling early bug detection and consistent test coverage before code deployments, improving platform stability and release confidence.
- Used **JavaScript** to create dynamic financial dashboards, transaction visualizations, and real-time investment summaries. Enabled seamless UI experiences with validations, interactive charts, and live data refresh.
- Participated in **Agile Scrum ceremonies** (daily stand-ups, sprint planning, reviews, and retrospectives) to collaborate with product owners, QA, and DevOps teams, ensuring alignment with business objectives and delivery milestones.

Full Stack Developer | Accenture, India

Feb 2019 – Aug 2021

- Directed the **migration of a legacy supply chain system** to a modern **microservices architecture using Spring Boot**, achieving a **10% reduction in response time** and enhanced scalability for handling vendor, inventory, and order data.
- Created **reusable React components** and managed application state using **Redux**, improving frontend performance and maintainability in modules like shipment tracking, inventory dashboards, and vendor management portals.
- Applied **fault-tolerant RESTful APIs** to enable reliable communication between frontend portals and backend logistics services, ensuring uninterrupted operations even during service failures or network interruptions.
- Employed **Java Servlets** to manage HTTP requests in warehouse management applications, handling session management and secure data validation, which **improved transaction processing speed by 12%** and enhanced reliability between supplier and logistics portals.
- Optimized **SQL queries and indexing strategies** to enhance performance for inventory retrieval, vendor lookup, and purchase history analysis, cutting query execution time by **8%**.
- Utilized **Java 8 Streams API** to process collections efficiently in modules like inventory filtering, order aggregation, and supplier performance analytics, reducing code complexity and improving performance.
- Designed **responsive web forms using HTML5** for modules like **inventory updates, vendor registration, and purchase order submission**, ensuring smooth data entry across desktop and mobile devices.
- Maintained and extended legacy supply chain modules built on **Apache Struts**, such as inventory search, vendor registration, and order management interfaces, ensuring business continuity during migration to microservices.
- Developed **robust error-handling and logging mechanisms** for web services, improving visibility into system operations and reducing time to diagnose and fix supply chain-related issues.
- Maintained and reviewed **Hibernate entity classes and mapping files**, ensuring alignment with evolving business requirements and database schema changes, which **improved data consistency and reduced integration issues by 25%** during development and deployment cycles.
- Reduced **technical debt** by proactively addressing issues flagged by **SonarQube**, increasing code quality and maintainability across the microservices.
- Employed **Git and Bitbucket** for effective version control, enabling seamless collaboration and code integration among development teams working on various modules.

EDUCATION

Master of Science in Computer Science – University of North Texas, Denton, USA

Bachelor of Technology in Computer Science and Engineering - JNTU College Of Engineering, Hyderabad, India
