

Senior Systems Operations Engineer

Accomplished technology leader with extensive experience in leading all aspects of systems operations, managing high-impact projects, providing strategic planning, and delivering innovative, large-scale solutions, specializing in the maintenance and optimization of technology infrastructures.

Credible history of advising senior leadership on complex business and technical initiatives. Expert in managing, training, and mentoring systems operations teams, overseeing major incident management, and enhancing system efficiency. Adept at translating advanced technology and organizational knowledge into actionable engineering solutions. Strong collaborator and strategic advisor, skilled in navigating complex challenges and implementing industry best practices to drive competitive advantage. Demonstrated ability to coordinate and lead during emergencies, including data center outages. Skilled in leveraging emerging technologies and business insights to deliver quantifiable value. Experienced in optimizing systems, enhancing security, and managing infrastructure to drive efficiency and reliability in enterprise environments. Highly proficient in building stakeholder relationships, managing change, and creating measurable procedures. Hands-on experience with cloud technologies and dedicated to achieving operational excellence.

Areas of Expertise

- Systems Architecture & Design
- Infrastructure Management
- Network Configuration & Security
- Automation & Scripting
- Disaster Recovery & Business Continuity
- Monitoring & Incident Management
- Cross-Functional Team Leadership
- Technical Documentation & Training
- Control-M 9
- Cloud Computing & Virtualization
- Performance Tuning & Optimization
- Incident Management & Troubleshooting
- Project & Program Management
- Strategic Planning & Advisory
- Cross-Functional Team Leadership
- Risk Management Framework
- Application Development
- SCOM 2019
- Continuous Process Improvements
- Customer Engagement
- Root Cause Analysis
- Crisis Management & Recovery Solutions
- Systems Operations Management
- Team Leadership & Project Delivery
- Vendor Collaboration & Coordination
- High Availability & System Reliability
- Remedy, ServiceNow, SMAX

Technical Proficiencies

Ticketing Systems: Remedy, ServiceNow, SMAX

Operating Systems: Windows 2008, 2008 R2, 2012, 2012 R2, 2016, 2019, 2022, Windows 10 Professional and Enterprise

Scripting and Automation: PowerShell

Infrastructure Management: RSA troubleshooting, Pulling GPO from remote servers, Local Administrators on servers, Cluster troubleshooting, Dell Power Servers – Raid 1, 3, 5, 10

Server & Storage Management: Veritas NetBackup software, HPSA Opware, HP OVO, APP, DBA, SAN, HBA Cards, FCINFO.exe, INQRAID.exe, MPCLAIM, Vendor hardware logs (HP, DELL), VMware ESX 3.01/3.02, GSX 3.1, vSphere Client Ver: 6.0.0, Build 3016447

VMware vCenter Server Ver: 6.0.0, Build 9313458, Citrix Farm 4.0, Symantec NetBackup, Avamar Enterprise

Network & Connectivity: VPN connections, SQL database servers, HP RDP (Altiris 6.0/6.5), HPSA Server Automation

Hardware Configuration: Configuring Raid on HP/Compaq servers: DL370 (G, G2), DL360 (G3, G4, G5), DL380 (G, G2, G3, G4, G5), DL580 (G, G2, G3, G4)

BIOS & Firmware Management: Updating BIOS and firmware on Smart Array, Backplane, Network Cards, HBA, and iLO/DRAC

Data Management: FileNet, SQL database restore, SAN configuration

System Administration: OS build and security patches, WINS, DNS, TCP/IP, LAN, and WAN, Group Policy Objects (GPO), Symantec Endpoint Protection (SEP) version 14

Professional Experience

Apex Systems Valero Network Administrator

August 2024 – Feb 01, 2025

I am currently a contractor that utilizes my years as Windows Engineer / System Administrator Windows 2008 – 2025, VMware Engineer vSphere 7 / 8 – work and escalate VMware Host and client issues, network issues; DSL / T-1 Wan circuit issue/s for refinery/s, and more as needed with companies that require good customer communication experience for all levels within the office / field / remote users.

Key Contributions:

- Utilizing my years of Windows Engineer / System Administrator / VMware Engineer / vSphere 7 / 8 – I work with escalating server, VMware Host and client issues...WAN network communication issue/s with remote VMware Host and clients...Peru, UK, Texas, Louisiana, Alabama, Mississippi, Iowa...
- Using PowerShell to pull Windows event log/s, VMware client logs, expand VMware client disk space as needed, create DNS record updates, troubleshoot cluster issues, create scripts to check service/s status STOP/STARTED on remote servers, START/STOP service/s on remote servers, script to check IIS AppPool state START/STOP, and IIS START IIS AppPool, and more...
- Work with team mates to create training documentations to improve new/current employee training retention.
- Currently learning SCOM – basic maintenance mode, ticket documentation...
- Currently learning Control-M 9 – running adhoc job runs as per LOB need, maintenance mode, pause job/s and reschedule
- Work after-hour desktop support for office and remote users' resolving password issue, reset password, troubleshoot printer mapping, desktop application troubleshooting, and remote office application troubleshooting, and more...

Wells Fargo Senior Systems Operations Engineer

2004 – 2023

Directed overall activities associated with the design, implementation, and management of scalable, secure, and highly available IT infrastructures by leading cross functional team. Architected solutions and led management of all installed systems and infrastructure integrating new technologies with existing systems to enhance performance and reliability. Led critical initiatives including platform upgrades/migration, automation, and process adherence. Minimized operational risks by overseeing change and release management procedures. Addressed intricate problems with precision, devising and implementing solutions that boosted operational efficiency and productivity. Provided ongoing operational support for mission-critical systems, ensuring seamless execution of nightly batch jobs and data loads. Evaluated SLAs, identified areas for improvement, and recommended strategic changes to enhance service level agreements.

Key Contributions:

- Championed complex technical projects and initiatives from inception to completion, including upgrades and technical refreshes, to optimize system performance.
- Enhanced platform resilience through production and platform support, mitigating potential disruptions, providing application support, conducting thorough root cause analysis, and proposing innovative solutions.
- Increased system efficiencies, reduced human intervention time on related tasks, and streamlined operational workflows by spearheading technical initiatives.
- Ensured maximum availability of systems and infrastructure by analyzing and assessing complex operational support systems, application software, and system management tools.
- Played a key role in mitigating a critical incident at Wells Fargo in 2020, ensuring continuity of operations for India-based teammates after a contractor caused an electrical fire in the AC vent, resulting in the loss of the Michigan data center.
- Volunteered for 12-hour shifts over three days alongside a team of 10-14 individuals to support data center recovery efforts.
- Coordinated with HP contractors to physically reboot each server, facilitating swift restoration of the site and minimizing downtime.

Education

VMware vSphere: Install, Configure, Manage v7

Microsoft Certified Professional – Windows 2000 Professional

Microsoft Certified Systems Engineer 2000

Microsoft Certified System Administrator 2000

Microsoft Certified System Administrator: Messaging

Microsoft Certified Systems Administrator 2003
