LinkedIn

PROFESSIONAL SUMMARY:

As an AWS Cloud/DevOps Engineer with 7 years of experience, I specialize in designing, deploying and managing scalable, secure cloud infrastructures. Proficient in AWS services, CI/CD pipelines, automation tools like Terraform and Ansible and containerization with Docker and Kubernetes, I streamline deployments and enhance system reliability. With strong expertise in monitoring, security and cost optimization, I excel in implementing DevOps best practices to deliver high-performance, resilient solutions that align with business goals. My collaborative approach and problem-solving skills drive seamless operations across diverse environments.

SKILLS:

Categories	Skills
Cloud Platforms	AWS (EC2, VPC, S3, Lambda, RDS, DynamoDB, Redshift, QuickSight, Athena, Glue, Elastic Beanstalk, CloudFront, SNS, Elastic Load Balancer, Auto Scaling, CloudWatch, EBS, EFS, Security Groups, IAM, Route 53, AMIs), VPNs, ExpressRoute, RBAC, SQL Database, Cosmos DB
Automation & CI/CD	Jenkins, Ansible, Terraform, Nexus, Chef, Puppet, AWS CodePipeline, CodeBuild, CodeDeploy, Bamboo, CircleCI
Containerization	Docker, Docker Hub, Kubernetes, Amazon ECS, EKS, Helm
Networking	AWS Route 53, Load Balancers, Security Groups, VPN, TGW, PrivateLink, Direct Connect, API Gateway, Elastic IPs
Security	AWS IAM, KMS, WAF, Shield, GuardDuty, AWS Config, CloudTrail, Secrets Manager, HashiCorp Vault
Monitoring & Logging	AWS CloudWatch, Prometheus, ELK Stack (Elasticsearch, Logstash, Kibana), Grafana, X-Ray, SNS, PagerDuty, SonarQube
Collaboration Tools	Slack, Trello, Jira, Confluence, Microsoft Teams
Additional Skills	Bash Shell Scripting, Apache, Tomcat, MySQL, Postgres, Selenium, Maven, Git, GitHub, GitLab, Agile, DevOps, CentOS, Alpine, Ubuntu, Debian, Vagrant

EXPERIENCE:

Comcast Corporation | AWS Cloud/DevOps Engineer

Mar 2022 – Present

- Design and implement scalable, secure and cost-efficient AWS cloud infrastructures using services like EC2, S3, Lambda, RDS, VPC, CloudFront and Route 53 to ensure high availability and reliability.
- Automate infrastructure provisioning and deployment processes using Terraform, reducing manual tasks and improving operational efficiency across the team.
- Build and maintain CI/CD pipelines with Jenkins, AWS CodePipeline and GitHub Actions, enabling faster and more reliable software deployments.
- Manage containerized applications using Docker and Kubernetes (EKS), ensuring seamless scaling and deployment for applications that handle thousands of daily users.
- Monitor cloud environments and application performance with AWS CloudWatch, Prometheus and Grafana, proactively addressing issues to improve system uptime and reliability.
- Implement and manage security best practices, including IAM role policies, KMS encryption, GuardDuty and WAF configurations, to maintain compliance with regulatory requirements like HIPAA.
- Optimize cloud costs by analyzing resource usage, implementing auto-scaling groups and leveraging reserved instances, reducing overall expenses while maintaining performance.
- Lead the migration of on-premises databases to AWS RDS and DynamoDB, enhancing performance, scalability and reliability while minimizing downtime during transitions.
- Collaborate with cross-functional teams to promote DevOps best practices, improving workflows and delivering features more efficiently through streamlined processes.

- Conduct regular vulnerability assessments and remediation using tools like SonarQube and AWS Inspector, ensuring a secure and compliant environment.
- Document infrastructure designs, operational procedures and troubleshooting guides in Confluence, helping streamline knowledge sharing and team onboarding.

BCBS | Cloud/DevOps Engineer

Jan 2020 – Feb 2022

- Developed and maintained Jenkins pipelines and Kubernetes dashboards, leveraging Terraform for infrastructure automation and management.
- Worked extensively with Docker, EKS and Kubernetes to build, test and deploy containerized applications, utilizing Jenkins pipelines to drive application builds and push them to Docker registries for deployment on Kubernetes clusters.
- Designed and implemented highly scalable and highly available cloud architectures on AWS, utilizing services such as EC2, S3, RDS and VPC to ensure optimal performance and reliability.
- Applied Infrastructure as Code (IaC) principles using Terraform to provision, configure and manage cloud resources, ensuring consistency, scalability and version-controlled infrastructure deployments.
- Designed and maintained secure cloud environments by implementing best practices for AWS IAM policies, security groups and encryption techniques to ensure robust access control and data protection.
- Collaborated with cross-functional teams, including development and operations, to ensure seamless integration and deployment of applications into the cloud infrastructure, supporting agile workflows.
- Optimized cloud infrastructure for cost efficiency, utilizing AWS features such as auto scaling, reserved instances and resource tagging, leading to a significant reduction in operational costs.
- Administered and optimized Apache and Tomcat web servers, fine-tuning configurations for improved performance and high availability.
- Set up and managed comprehensive CI/CD pipelines using Jenkins to automate the deployment of code from GitHub repositories to servers, thoroughly testing in development and QA environments before production release.
- Utilized Jenkins for continuous integration to ensure streamlined version control and efficient build processes, ensuring high-quality and reliable software releases.
- Automated various processes through Bash shell scripting, including scheduling and performing full and incremental backups, ensuring data integrity and system uptime.

Epsilon | Linux System Administration

Jan 2018 - Dec 2019

- Installed, configured, updated and removed system and application software as part of routine system management to ensure optimal performance.
- Planned and carried out maintenance tasks on UNIX/Linux systems, including deploying new operating system releases and middleware components (Layer 2).
- Worked with Docker Engine to create and manage containers, streamlining the deployment and management of applications.
- Independently resolved incidents across various technologies, while collaborating with team members to handle complex and cross-technology issues effectively.
- Created user profiles, managed permissions and configured user groups to maintain secure system access and meet organizational needs.
- Used Bash Shell scripting to automate processes and schedule tasks, including performing full and incremental system backups.
- Diagnosed and resolved Linux server and operating system issues to ensure system stability and functionality.
- Partnered with development and operations teams to understand intricate product requirements and translate them into efficient automated solutions.

EDUCATION:

- **Bachelor's Degree in computer Science**
University of Lome

CERTIFICATION:

- **AWS Certified DevOps Engineer – Professional**
- **HashiCorp Certified: Terraform Associate (003)**
- **CKA: Certified Kubernetes Administrator**
