Senior Software Engineer | Team Lead

PROFESSIONAL SUMMARY

I'm a Senior Software Engineer and Team Lead with over 15 years of experience designing and delivering backend systems and cloud-based solutions. I specialize in building scalable, high-quality software for clients around the world while leading and mentoring diverse teams. I'm passionate about driving technical innovation, improving system performance, and helping others grow in their careers. From launching new payment methods to optimizing distributed systems and solving complex technical challenges, I love creating meaningful solutions that make a real impact.

AREAS OF EXPERTISE

- | | | | |
|------------------------------|-------------------|-------------------|------------------------|
| ✓ Java | ✓ Spring Boot | ✓ REST APIs | ✓ AWS |
| ✓ Distributed Systems | ✓ Microservices | ✓ Scalability | ✓ Backend architecture |
| ✓ SQL & Database management | ✓ Data Structures | ✓ Problem-solving | ✓ Docker |
| ✓ Testing (Unit/Integration) | ✓ Kafka | ✓ DevOps & CI/CD | ✓ Kubernetes |

CAREER HIGHLIGHTS

Scalable Platform Migration: Onboarded MS Teams, the largest data type by daily message volume, onto the new microservices platform. This migration tripled platform traffic while keeping performance steady and avoiding any production issues.

Innovative Payment Solutions: Contributed significantly to the design and rollout of two new payment methods for Amazon Digital Payments in Mexico, introducing installment payment options. This feature addressed a key demand in the local market and made a real difference for millions of customers while keeping Amazon competitive in the region.

Cloud Project Leadership: Led the development and launch of the Amazon S3 Batch Replication feature, which allowed customers to replicate objects effortlessly across multiple destinations. This feature delivered significant improvements to customer workflows and usability.

Team Leadership & Mentorship: Mentored and supported diverse engineering teams, helping team members grow their skills, improve productivity, and work more cohesively together.

Technical Excellence at Scale: Designed a high-performance microservice for centralized transaction searches at Realex Payments, cutting query times by 30% and significantly boosting system efficiency.

Proven Cross-Industry Impact: Built and delivered large-scale backend solutions across industries like e-commerce, cloud computing, and payments, leveraging technologies such as Kubernetes, Kafka, and Elasticsearch to solve complex challenges.

PROFESSIONAL EXPERIENCE

Senior Software Engineer, Global Relay, Vancouver, BC | Sept 2023 – Present

Global Relay provides cutting-edge software-as-a-service solutions for electronic message archiving, instant messaging, compliance, and supervision. With a focus on highly regulated industries, Global Relay helps organizations securely manage communications and ensure compliance with industry regulations.

- Manage and develop core microservices in the data ingestion pipeline, covering essential stages like data capture, normalization, de-duplication, and storage, using technologies such as Java 17, Spring Boot, Docker, Kafka, MongoDB, and Kubernetes.
- Integrated MS Teams—one of the largest data sources by daily message volume—into the new microservices platform, tripling platform traffic without affecting performance or causing production issues.
- Successfully migrated two microservices from OpenShift to Kubernetes as part of a company-wide effort to improve scalability and cut infrastructure costs.
- Partnered with Sales leadership to enhance an internal tool for generating test data, improving efficiency in client demos.

Software Development Engineer II, Amazon Digital Payments, Vancouver, BC | Dec 2021 – Sept 2023

The Digital and Emerging Payments Mexico team focuses on bringing new payment methods to the Mexico marketplace (amazon.com.mx). The team's goal is to grow the customer base by delivering seamless, innovative, and customer-focused payment solutions that enhance the overall shopping experience.

- Played a key role in the design and launch of two new payment methods for Amazon Digital Payments in Mexico, introducing the option for customers to pay in installments.
- Collaborated with external teams to discuss and agree on solutions, created detailed project plans, and delegated tasks to ensure components were delivered on time.
- Led and mentored junior engineers throughout the implementation process, ensuring high-quality results while fostering their growth. I set clear expectations and provided regular feedback to support their career development.
- Oversaw the release of various components to production, ensuring thorough testing and debugging for a seamless integration with existing systems.

Software Development Engineer II, Amazon AWS S3, Vancouver, BC | Feb 2020 – Dec 2021

Amazon Simple Storage Service (Amazon S3) is an industry-leading object storage service known for its scalability, data availability, security, and performance. S3 Replication enables automated, cost-effective data replication within or across AWS Regions, helping customers with compliance, disaster recovery, and data sharing needs.

- Led a team of three engineers to build the S3 Batch Replication feature, which allows on-demand replication for use cases like retrying failed replications or replicating to new destinations.
- Designed the solution, broke down tasks, and assigned work across the team while mentoring two junior engineers to support their growth.
- Kept leadership informed with regular status updates, ensuring transparency and accountability throughout the project.
- Reviewed and tested code to maintain high quality and ensure all deliverables met project requirements.
- Successfully launched the feature by the end of 2021, giving customers more flexibility with replication and streamlining their workflows.

Team Lead, Newswhip, Dublin, Ireland | May 2018 – Jan 2020

NewsWhip tracks and predicts trending stories, videos, and content using data from billions of social network users. Trusted by publishers, marketers, and PR teams, it helps organizations connect with audiences and anticipate emerging trends.

- Developed and implemented new features for backend systems that handled data ingestion, ensuring they ran efficiently and reliably.
- Served as a technical mentor by guiding team members on best practices, helping them create development plans, and providing regular feedback through one-on-one sessions.
- Worked closely with cross-functional teams to gather requirements and deliver solutions that aligned with business goals while enhancing the user experience.
- Proactively identified and solved technical issues, improving system stability and overall performance.
- Used a variety of technologies—including Scala, Play Framework, Akka Streams, Akka HTTP, Kafka, Elasticsearch, Cassandra, Docker, Kubernetes, Google Cloud, Prometheus, and Grafana—to build high-quality software solutions.

Team Lead, Realex Payments (owned by Global Payments), Dublin, Ireland | May 2014 – Apr 2018

Realex Payments, acquired by Global Payments in 2015, is one of Europe's largest and fastest-growing online payment gateways. It provided businesses with comprehensive payment processing services, handling over €28 billion annually for 12,500+ retailers across Europe.

- Served as the technical point of contact for multiple projects, leading their development and delivery while providing guidance to ensure project goals were successfully met.
- Managed performance and career development for a team of four developers and two QA engineers by setting clear expectations, giving regular feedback, and creating development plans to support their growth.
- Worked closely with the System Architect and Product Owner to align on high-level designs and provided input and approvals for detailed technical designs.
- Suggested and prioritized technical improvements with the Product Owner, resulting in better system performance and increased stability.
- Personally tackled complex backlog items, driving progress on critical tasks and ensuring deliverables were of the highest quality.
- Designed and implemented a microservice to centralize transaction searches across all Realex applications. Using Java 8, Spring Boot, MyBatis, SQL Server 2016, RabbitMQ, OpenStack, and Elastic Stack, the service was successfully rolled out to production in May 2017.
- Upgraded the Hosted Payment Page application by adding support for Alternative Payment Methods and modernizing it with Spring Boot and Elastic Stack.
- Provided second-level production support, resolving issues quickly and ensuring the system remained reliable.

Senior Consultant, Deloitte, Dublin, Ireland | Aug 2010 – Apr 2014

Deloitte is a globally recognized professional services firm, providing consulting, audit, tax, and advisory services.

- Developed business applications for both external customers and internal users while working as a Senior Consultant for a major public sector organization.
- Took part in every stage of the application lifecycle, from technical design and back-end development to live support, ensuring applications were functional, reliable, and provided a smooth user experience. Wrote and implemented unit tests with JUnit to uphold high-quality code standards.
- Worked closely with business users to estimate, prioritize, and deliver future requirements, making sure technical solutions aligned with the organization's goals.
- Delivered post-launch updates and enhancements to address evolving user needs and improve the overall functionality of applications.
- Used a range of technologies—including Java EE, Spring WebFlow 2.0, JSF, RichFaces, Hibernate JPA, Spring JMS, WebLogic Server, DBMS Ingres, Maven, and Ant—to build robust, enterprise-level solutions.

EDUCATION

Master's Degree, Computer Science Engineering
Universidad de Valladolid, Spain

2008

Bachelor of Engineering, Computer Science Management
Universidad de Valladolid, Spain

2004
