

Professional Summary:

- Around 7+ years of experience in web application design, web service development, programming, testing, support maintenance, and end-user support using Java/J2EE technologies.
- Deep understanding and proficiency in the software development life cycle (SDLC), spanning user interaction, design/architecture, development, integration, documentation, coding, testing, and deployment.
- Best Practice in software design, development, and testing, including Test Driven Development (TDD) and Continuous Integration (CI).
- Expertise in building hybrid applications on the AWS cloud, leveraging Core Java and J2EE technologies such as Spring, Spring Boot, Servlets, JSP, JSF, EJB, Hibernate, Struts, JDBC, and JMS.
- Proficiency in web technologies including HTML5, JavaScript, AJAX, AngularJS, and JSON, adhering to W3C standards for dynamic and interactive web application development.
- Strong knowledge and implementation skills in microservices architecture, utilizing frameworks like Spring and Spring Boot to achieve scalability, modularity, and ease of maintenance.
- Extensive experience with ORM frameworks such as Hibernate and JPA, ensuring efficient management of database operations and data integrity.
- Extensive experience in developing User Interface (UI) using CSS, HTML, ReactJS, jQuery, JavaScript, Bootstrap, JSON, Ajax, Ext JS, Angular JS, Angular 2/4/6.
- Experience in creating connections for HTTP requests using Web sockets.
- Utilization of Amazon Web Services (AWS) services such as EC2, S3, Amazon Simple DB, Amazon RDS, Amazon Elastic Load Balancing, Amazon SQS, AWS Identity and Access Management, AWS Cloud Watch, Amazon EBS, and Amazon Cloud Front for scalable and highly available application deployments.
- Used Node.js to create powerful web-based dashboards that checks the services' statuses in an asynchronous manner and pushes data to clients using web sockets.
- Developed RESTful services with web sockets & JSON.
- Experience in deploying applications on AWS using services like AWS Lambda, AWS API Gateway, AWS Dynamo DB, and AWS S3 for server less architecture and data storage.
- Familiarity with AWS Elastic Beanstalk for streamlined application deployment and AWS Cloud Formation for infrastructure as code.
- Experienced in process, validate, parse, and extract data from XML using as XSL, XSLT, XML schemas, XPath, XForms, XSL-FO and parsers like SAX, DOM.
- Experience in implementing Swagger for microservices for documenting Rest API.
- Well versed with object-oriented design (OOD), analysis (OOA), and modeling (OOM) based on Unified Modeling Language (UML) architecture.
- Hands on experience in API Management implementations such as APIGEE.
- Experience in Server infrastructure development on AWS Cloud, extensive usage of Elastic Beanstalk, RDS, EC2, S3, VPC, ELB, Route53, SNS, and SQS.
- Experienced in writing SQL and PL/SQL scripts including views, indexes, sequences, packages, procedures, functions, database triggers.
- Extensive experience on Oracle, MySQL, MS SQL Server, IBM DB2 and Solid understanding of Database Management System.

Technical Skills:

Languages	Java 1.8, C, C++, SQL, PL/SQL, UML
Java Technologies	Java 1.8/11, Microservices, EJB, Servlets, JSP, JSTL, JAX-RS, JDBC, JNDI, JMS, JAXB, JUnit, Mockito, AWT, Spring MVC, Spring AOP, Spring DAO, Spring Core, Spring Security, Spring Actuator, Spring Boot, JPA, Hibernate, Spring JDBC, Spring Data JPA, Spring Data REST, Log4j, ActiveMQ, RabbitMQ, Apache Kafka, Netflix OSS, JMeter.
Web Technologies	HTML/HTML5, CSS/CSS3, Bootstrap, JSP, Ajax, XML, JSON, NodeJS, Express, ReactJS, AngularJS, Angular 2/4/6/7/8/9 and Karma, Jasmine, Chai, and Jest
Development Tools (IDEs)	Eclipse, MyEclipse, RAD, WSAD, NetBeans
Web/Application Servers	Tomcat, WebLogic, IBM WebSphere, JBOSS
Design Patterns	MVC, Front Controller, Session Façade, Singleton, and DAO patterns
DataBase	Oracle, MS SQL Server, MySQL, DB2, NoSQL - Mongo DB, Cassandra
Services	SOA architecture, RESTFUL/SOAP, Microservices, Axis 2, Apache CXF
Platforms	Windows, UNIX, LINUX
Methodologies	Agile Scrum Methodology, Waterfall, RUP
Build/Cloud Tools	Rational Rose, CVS, PVCS, Git, SVN, VSS, Clear Case, JIRA, Jenkins, JUnit, TestNG, Selenium, Cucumber, Jbehave, Mockito, IBM MQ, Log4j, ANT, Maven, Docker, Kubernetes, Gradle, Azure, AWS, EC2, VPC, S3, SNS, SQS, PCF.

Professional Experience:

Mastercard, Harrison, NY

June 2024 – Present

Role: Sr Java Full Stack Developer

Responsibilities:

- Involved in Requirements gathering, Analysis, Design, Development and Testing of application using AGILE methodology (SCRUM) in a Test-driven Development (p) approach.
- Developed and designed the web interface using HTML5, CSS3, TypeScript, Angular 6.
- Used React JS for templating for faster compilation and developing reusable components.
- Developed single page applications using React Redux architecture, ES6, web pack and grunt.
- Developed various screens for the front end using ReactJS and used various predefined components from NPM (Node Package Manager).
- This includes user interfaces, user experience design (UX/UI), security measures (such as authentication and encryption), error handling, notifications, and feedback mechanisms.
- Used Axios with React Native for making Ajax calls.

- Responsible for React UI and architecture. Building components library, including Tree, Slide-View, and Table Grid.
- Involved in using react.js for creating interactive UI's using one-way data flow, Virtual DOM, JSX, React Native concepts.
- Payment processing applications must comply with industry regulations (such as PCI-DSS for handling credit card data) and adhere to security standards. Java developers need to stay updated on relevant regulations and implement compliance measures in their applications.
- Developed user interface by using the React Js, Flux for SPA Development.
- Worked in using React JS components, Forms, Events, Keys, Router, Animations, and Flux concept.
- Worked on Angular Guards like canActivate, canActivateChild, canDeactivate, resolve, canLoad for preventing unauthorized access.
- Used Microservice architecture with Spring Boot based services interacting through a combination of REST and Apache Kafka message brokers and worked with Kafka Cluster using Zookeeper.
- Developed Microservices using SpringBoot v2, Spring Data With JPA, OAuth2, Spring Security and deployed on to Kubernetes and integrated Microservice with Kafka MQ.
- Payment processing involves integration with payment gateways, handling different payment methods (credit cards, debit cards, bank transfers, etc.), managing transactions, fraud detection, reconciliation, and compliance with regulatory standards.
- Created a responsive dashboard using Angular 2 and RESTful web services utilizing web sockets for continuous real time data feeds.
- Actively involved in coding using Java 1.8 features, Spring 4.x to develop features from end to end.
- Designed and implemented an application using Spring Boot, Spring IOC, Spring transactions, Dependency Injection, Spring Annotations, Spring AOP, Spring Actuator, Spring Container managed transactions.
- Developed Web sockets on server side to handle stream requests from UI.
- Developed application as Enterprise Javascript using – AngularJS, NodeJS, Web sockets, NPM, Protractor etc.,
- Clear concepts of Azure Service Management (ASM - Classic) model vs newer (ARM - Azure ResourceManagement) model and experiencing in setting up RBAC roles (OOB) and Custom RBAC roles to Subscription level, or Resource Manager Level to manage Azure Resources.
- Worked on Configuration of Internal load balancer, load balanced sets and Azure Traffic manager.
- Used Docker to virtualize deployment containers and push the code to EC2 Cloud using PCF.
- Worked with unit testing of Angular applications using Jasmine and Karma and Spring Boot applications using JUnit, Mockito and performed end to end testing using Protractor.
- Worked on Jenkins for the Continuous Integration and Continuous Deployment.
- Managed source code using GitHub, Bitbucket, performed operations like push, pull and used git bash to commit and perform changes to repositories.
- Used JIRA as the bug tracking system to track and maintain the history of bugs/issues on everyday basis.
- Worked in an Agile based development environment and participated in Retrospective, Scrum session for better understanding, communication among team members.

Environment: JDK 1.8, Azure, Spring, Micorservices, Hibernate, Spring Boot, LINUX, Maven, RESTful Web Services, Jenkins, HTML5, CSS3, React JS, Redux, Flux, Kafka, Bootstrap, JavaScript, jQuery, Ajax, Node.js, MongoDB, SoapUI, Postman, JUnit, JMeter, Git, JAX-RS, PCF, JIRA, Cucumber, Putty, Agile.

Capital One, TX

Responsibilities:

- Worked on the Java, Python, J2EE, DB Server and Reporting Services within the technical team using Agile methodology by communicating directly with the Client & Product Owners.
- Utilized Core Java concepts like Collections, Multithreading and Exception handling to develop business components.
- Used Multithreading in programming to improve overall performance using Singleton design pattern in Hibernate Utility class.
- Utilize AngularJS 1.6's two-way data binding to synchronize data between the UI and the model in real-time. Leverage AngularJS directives and services to create dynamic and interactive user interfaces that reflect the latest data from the Java back end, ensuring that changes in the application state are immediately reflected in the UI and vice versa.
- Developed application on Spring framework by utilizing its features like Spring Boot, Spring Dependency injection, Spring Beans, Spring Security, Spring JPA, Spring Web flow using MVC.
- Used Spring Core for configuring and using the spring beans in the application.
- Built REST API end-points for various concepts using JAX RS API.
- Developed RESTful services based on Spring REST using Jersey framework.
- Developed several RESTful API web services which produces both XML and JSON to perform tasks, leveraged by both web and mobile applications.
- Documented the REST API's using Swagger2 API for briefing the services involved in the application.
- Work with product owners and business analysts to understand feature requirements and prioritize them.
- Utilize Angular's state management libraries (e.g., NgRx) to handle complex state and ensure smooth data flow within the application.
- Lead discussions on technical challenges, design decisions, and problem-solving strategies.
- Develop APIs using logical and consistent naming conventions for API endpoints to ensure they are intuitive and easy to understand
- Ensuring that Java code adheres to established coding standards and conventions, such as consistent indentation, naming conventions, and commenting practices. This makes the codebase more readable and maintainable for the entire team. Involved in testing, build and installation environment
- preparing high-level and low-level design documents involve several key tasks to ensure that the system is well and that all components are clearly defined
- Ensure the documentation is accessible and understandable to both technical and non-technical stakeholders.
- Collaborate with stakeholders to gather and understand functional and non-functional requirements.
- Create diagrams to visualize the system's structure and interactions.
- Designed the database schema including tables, relationships, and constraints.
- Defined detailed API specifications, including endpoints, request/response formats, and error handling.
- Configured Spark streaming to receive real time data from the Kafka and store the stream data to HDFS using Scala.
- Build the infrastructure required for optimal extraction, transformation, and loading (ETL) of data from a wide variety of data sources like Salesforce, SQL Server, Oracle & SAP using Azure, Spark, Python, Hive, Kafka and other Bigdata technologies.

- Designed and developed scalable web applications using Java, Spring Boot, and AngularJS, improving performance.
- management using Spring AOP.
- Used spring batch framework to create custom readers and writers to work with the application.
- Implemented ODBC which is used for connecting to the database Oracle.
- Provided support for all core web services technologies including Web Service Description language (WSDL).
- Integrated testing methods implemented by using Karma and Jasmine.
- Good Experience with Continuous Integration and Continuous Delivery by using tools like Jenkins.
- Have worked on AWS to integrate the server side and client-side code.
- Used AWS deployment services to quickly set up a dynamic website and configured virtual servers.

Environment: SOA, HTML, CSS- SaaS, AJAX, Angular 1.6, SOAP, JAX-RS, jersey, Swagger, Hibernate, , Spring Batch, WSDL, AOP, Oracle DB, Karma, Jasmine, Jenkins, AWS, JWT Web Services, Weblogic Application Server, ULC , SVN, Eclipse ,RUP(Rational Unified Process), Hibernate, web service, Core Java, PHP, Struts, JSP, jQuery and JavaScript, Eclipse, NetBeans, IntelliJ, Visual Studio, STS

Infosys Limited

September 2020 – Aug 2022

Role: Full Stack Java Developer

Responsibilities:

- Involved in analysis and design phases of Software Development Life Cycle (SDLC).
- Worked on Agile methodology.
- Developed UML use-case, class, object, sequence, collaboration, and activity diagrams using UML.
- Wrote object-oriented JavaScript for transparent presentation of both client- and server-side validation.
- Designed and developed application based on Spring MVC design pattern.
- Developed the application using Eclipse IDE and used eclipse standard/plugin features for editing, debugging, compiling, formatting, build automation, test case template generation, mutator/accessor code generation.
- Used spring validation and wrote validation rules.
- Involved in developing code for obtaining bean references in spring framework using Dependency Injection (DI) or Inversion of Control (IOC) using annotations.
- Primarily focused on the spring components such as Dispatcher Servlets, Controllers, Model and View Objects, View Resolver.
- Involved in development of Web Services using JAX-WS.
- Involved in the implementation of DAO using Spring-Hibernate ORM.
- Used Spring Boot to dynamically wire up beans and settings and applies them to the application context at startup of the application.
- Developed the business layer using Spring Boot.
- Used Spring Boot to collect the data from users and packaged the data as JSON distributed to applications.
- Used JSF for internal report generation by fetching data from database with customized view using CSS and AJAX for form processing.
- The presentation tier was developed using JSP, JSTL, Java Script and HTML.
- Extensively used HTML, JavaScript and Ajax for client-side development and validations.
- Developed RESTful Web services client to consume JSON messages.

- Involved in designing and developing the front end of the application using JSP, Java script, AJAX, HTML5, DHTML and CSS3.
- Development UI modules using HTML5, JSP, JavaScript and CSS3.
- Used Angular custom pipes to format the data before displaying it to the user. And designed dynamic client-side JavaScript code to build web forms and simulate processes for a web application, page navigation using Angular.
- Built Angular components, UI services to consume rest services using Component based architecture provided by Angular.
- Involved in configuring JNDI properties.
- Fetched data from Mongo DB using Mongoose of Node.JS.
- Implemented the mechanism of logging and debugging with Log4j.
- Involved in Unit testing of application using Junit and built the package using Maven and deployed the application on to WebLogic App Server.
- Performed Unit testing and prepared new test case documents.
- Involved in Production support and provided training and knowledge transfer to the user.

Environment: Java, J2EE, HTML, Hibernate, Java SDK, SOA, MongoDB, WSDL, UDDI, SOAP, JavaScript, JMS, Struts, JSON, Servlet, JSF, JSP, CSS3, HTML, jQuery, Angular JS, AJAX, JDBC, Oracle, Maven, Log4J, SVN, UML, JAXB, XML, Scrum, Unix/Linux, Junit.

Client: DXC Technology – India (Infosys Limited)

Nov 2019 - Aug 2020

Role: Full Stack Developer

Responsibilities:

- Participated in scrum meetings to discuss the progress of the application and contributed to developing, analyzing and reviewing the tasks according to the Agile methodology.
- Implemented J2EE standards and Used Java 11, Spring Boot to create microservices based architecture.
- Utilized spring boot annotations and implemented dependency injection.
- Implemented microservices using in AWS with react components using RXJS.
- Implemented REST API to create different web services and used Rest Template as a client to consume the web services.
- Worked with AJAX for implementing web pages and fetched the data with API calls using Restful web services.
- Worked with React JS to build reusable components like forms, navbars, buttons and render large data sets and used Jasmine to test the UI.
- Used React router and NodeJS to develop single page application and used NPM for package management and installations.
- Utilized MongoDB to design multi shared cluster and connected to the backend using Hibernate ORM.
- Worked on test driven environment using Mockito framework and JUnit for unit testing to test the accuracy of the code and logging is done using SLF4J.
- Used IntelliJ IDE to develop the application and Gradle as a build tool for dependency management.
- Deployed application on AWS EC2 and used Artifacts from JFrog Artifactory.
- Utilized Cloud Watch to monitor resources and application, including creating alarms to monitor metrics.
- Used Amazon SQS (Simple Queue Service) for internal team communication.
- Managed source code and versioning using Code Commit

Environment: Agile, Java 11, Spring Boot, Rest API, React JS, RXJS, NPM, AJAX, Jasmine, HTML5, CSS, Bootstrap, NodeJS, Mongo DB, AWS, EC2, Cloud Watch, Amazon SQS, JUnit, Mockito, SLF4J Gradle, Code Commit, IntelliJ.

Horizon Informatic Services, Hyderabad, India

May 2017 to Sep 2019

Role: Java/J2EE Developer

Responsibilities:

- Designed and developed the application using Agile Scrum methodology by breaking down the project to several sprints.
- Involved in various phases of Software Development Life Cycle (SDLC) of the application like Requirement gathering, Design, Analysis, Code development and estimating the timeline for the stories and project.
- Design and develop and test HTML5, CSS3, Bootstrap, JavaScript, jQuery and Angular.js that meets accessibility and web browser standards for website.
- Involved in developing applications using AngularJS like Grids, Toolbars, Panels, Combo-Box and Buttons.
- Notification Platform Service is a MicroServices Application developed using Spring Boot, REST, SOAP, Hibernate.
- Developed the persistence layer (DAO) and the presentation layer (controllers) and used J2EE design patterns like Model View Controller, Data Access Object, and Business Delegate, etc.
- Used Spring Core Annotations like Spring DI for Dependency Injection, Spring MVC for REST API's and Spring Boot for Microservices. Manage dependency injection using Spring Boot frameworks.
- Implemented Spring Boot Microservices to perform modular functionality as per Microservices architecture.
- Implemented Java EE components using Spring MVC, Spring IOC, Spring transactions and Spring security modules
- Used Hibernate annotations for Object Relational Mapping (ORM) with Oracle database.
- Used Spring Boot framework to write Presentation Layer, Business Layers and Controller servlets.
- Used Spring Boot for initialize and bootstrapping the build configuration for the boot-based web applications.
- Developed SOAP based web services using Apache CXF and test them using SoapUI
- Supporting for Agile methodology for these services and using JIRA for tracking tool.
- Used AJAX, JSON to send request to the server to check the functionality of the websites and for storing and exchanging information between browsers and servers.
- Inventory groups are added for Amazon Ec2 for instances and monitoring AWS hosts.
- Used MAVEN for project management and build automation. Used Subversion as a version control for implementing the application.
- Used GIT for version control and used IntelliJ as the IDE for developing the application.
- Design and development of RESTful web services using framework built on top of Node js.
- Developed AWS cloud formation templates and setting up Auto scaling for EC2 instances and involved in the automated provisioning of AWS cloud environment using Jenkins and Chef.
- Expertise working experience on continuous build integration (CI/CD) tools Jenkins.
- Developed unit and integrated test cases for existing MicroServices.
- Involved in the unit testing by writing the test cases and test suites with the help of JUNIT.
- Actively participated in the daily SCRUM meetings to produce quality deliverables within time.

Environment: Java, Spring, Spring Boot, Microservices, AWS, JPA Hibernate, REST APIs, Tomcat, HTML5, CSS3, Angular.js, Bootstrap, JSON, Jenkins, Agile scrum, Node.js, Maven, GIT, Visual Studio Code.
