

DEEPAK PANGULURI,

SAP Technical Project Manager

Coppell, Texas | +1 2012031340 | deepak.chowdary@gmail.com | [linkedin.com/in/deepakpanguluri](https://www.linkedin.com/in/deepakpanguluri)

Key Skills

Dynamic and result-driven Project Manager with over 20 years of extensive experience in SAP project delivery, stakeholder management, and comprehensive planning across various stages of project. Expertise in SAP solution architecture, including S/4 HANA Public and Private Cloud, SAP BW, BPC and SAP BO/Xcelsius, IBP, SCM, APO, TPM, PP, MM, SAC, SAP BTP, SAP Datasphere. Demonstrated ability in driving innovative digital solutions with a strong focus on S/4HANA Cloud Migration and Business Transformation Platform (BTP).

Professional Experience:

- Spearheaded numerous projects through all development stages from blueprint, feasibility analysis to technical design, realization, development, go-live support, and user training.
- Projects Managed SAP
 - SAP Datasphere/SAP Business Data Cloud Greenfield and Brownfield Implementation
 - SAP AI Green Field
 - SAP BTP Green Field and Brown Field Implementations
 - SAP S/4HANA BW upgrade and Migration
 - SAP Ariba Green Field and Data Migration
 - SAP S/4HANA Transport Management Green Field and brown Field
 - SAP S/4HANA Production Planning
 - SAP S/4HANA Procurement
 - SAP S/4HANA OTC, P2P, FI-CO
 - SAP IBP, SCM, APO
 - Migration from Microsoft Dynamics, Net Suite, Oracle Apps to SAP
 - Migrating from SAP to Azure Data Lake, Snowflake using Databricks and SNC Glue ETL/ELT Tools
- Extensive experience in Business Objects 4.x Web Intelligence, Dashboard Designer, Analysis for Excel,
- Analysis for OLAP, Design Studio, Explorer, Workspaces, BICS, BIWS, QAAWS, Live Office, Infoview, Import Wizard, Created Universes on top of HANA calculation views and developed the WebI reports and dashboards using IDT (Information design tool).
- Experience in the BOBJ upgrade from 3.x to 4.0 and from 4.0 SP02 to 4.0 SP04 Patch 5 to 4.1 SP02.
- Subject-Matter Expert in SAP Ariba and SAP IBP (Demand, Response, Supply operations) APO, SCM,
- Manage, architect, build data-driven insights and high-impact data models using SAP IBP data modelling and data warehousing services.
- Empower clients to turn information into Action by gathering, analyzing, and modelling client data which enables smarter decision-making using SAP Predictive Analytics in SAC.
- Experience with implementing the Integration Suite which is part of the SAP Business Technology Platform (BTP), including deep knowledge of the technical architecture.
- Experience with SAP PI/PO (Process Integration / Process Orchestration) in automotive, manufacturing and sales/distribution Industries Business Process.
- Experience with SAP S/4HANA integration and ETL solutions such as SAP Migration Cockpit (MC), SAP Rapid Data Migration (RDM), SAP Data Service, SAP SLT.
- Experience with SAP Cloud Foundry, SAP Build Work Zone, SAP ABAP BTP, and with Cloud Application Programming Model including RESTful ABAP Programming Model
- Experience with working with OData and CDS views for data integration with Fiori portals and SAP Analytics Cloud Stories.
- Developed and monitored project budgets, resource plans, and blueprints adhering to SAP ASAP, Greenfield, and Brown Field implementation methodologies.

Core Competencies:

- Strategic Project Management with SAP Solution Architecture
- Business Intelligence & Data Analytics, Digital Transformation & Innovation
- Stakeholder Communication, Business User Training, Budget, and Resource Planning

Education

London Institute of Technology and Research2001 - 2002
M.B.A International Marketing
London, United Kingdom

Madras University,1996 - 2000
Bachelor of Engineering in Electrical & Electronics
Chennai, India

Portfolio

Client: Levis & Strauss Co, San Francisco, California (Mar 2024 - Till Date)
Role: Technical Project Manager
Modules: SAP S4HANA, SAP FICO, SAP BW/HANA,
Environment: SAP S4HANA, SAP Datasphere/SAP BDC/SAC,SAP BTP, SAP AI Core, GCP, Databricks, Big Query, Tableau, Power BI

- Served as the overall Technical Project Manager, responsible for defining project roadmaps, managing multi-phased deliverables, and ensuring alignment with enterprise digital transformation goals across SAP and cloud ecosystems.
- Planned and executed project timelines, managed cross-functional delivery teams (onshore and offshore), and led stakeholder engagements including steering committee updates and executive reporting.
- Drove Agile project delivery by managing sprint planning, backlog grooming, risk mitigation, and sprint retrospectives using Jira, Smartsheet, and Atlassian tools.
- Delivered large-scale SAP initiatives including:
- AI-driven analytics and predictive modeling using SAP AI Core, LLMs, and SAP BTP Vector Engine to enhance revenue visibility and vendor insights.
- SAP BPA automation framework for periodic business performance reporting across wholesale and e-commerce divisions using Shopify, Databricks, and SAP Data Integration Suite.
- SAP Datasphere-driven data lake architecture to centralize data from SAP and non-SAP systems, with integration into BigQuery, Tableau, and Power BI for unified KPI dashboards.
- Oversaw budget and resource planning, collaborated with vendors and internal COEs, and monitored project KPIs through Agile metrics and PMO dashboards.
- Managed cross-platform integration involving SAP FICO, SAC for strategic planning, BW to GCP migration, and BTP low-code automation workflows.
- Led the hypercare and post-go-live support phases, ensuring knowledge transfer, issue triage, user adoption, and business continuity planning.

Client: Nieman Marcus, Dallas, Texas (Jul 2024 - Feb 2024)
Role: Technical Project Manager
Modules: SAP S4HANA, SAP FICO, SAP Extended Warehouse Management (EWM)
Environment: SAP S4HANA, Snowflake, Tableau, POS system: Manhattan Associates POS and Ecommerce

- **Project Scope:**
 - Led and managed end-to-end tasks using user stories in Jira with scrum project management framework.
 - Successfully led end-to-end migration data from SAP to Snowflake.
 - Collaborated with cross-functional teams to design and implement customized solutions aligned with following objectives.
- **Sprint Planning:**
 - At the beginning of each sprint, the Scrum team selects a set of backlog items to work on during the sprint based on their priority and complexity.
 - During sprint planning meetings, the team breaks down the selected backlog items into smaller tasks and estimates

the effort required to complete them.

- Sprint planning for backlog is prioritized by list of all tasks and requirements for the migration project.
- Collaborate with stakeholders to refine and prioritize the backlog items, including tasks related to CDS view migration, data extraction, schema design, etc.
- **Sprint Execution:**
 - The Scrum team works on implementing the selected backlog items during the sprint, focusing on completing the tasks according to the sprint goal.
 - Daily stand-up meetings are held to discuss progress, any obstacles encountered and plans for the day.
- **Incremental Delivery:**
 - At the end of each sprint, the team delivers a potentially shippable increment of the migration project, which includes completed and tested functionality.
 - Incremental delivery allows stakeholders to provide feedback early in the process and ensures that the project stays aligned with their expectations.
- **Review and Retrospective:**
 - Conduct a sprint review meeting to demonstrate the completed work to stakeholders and gather feedback.
 - Hold a sprint retrospective meeting to reflect on the sprint process, identify areas for improvement, and make adjustments for future sprints.
- **Adaptation and Iteration:**
 - Based on feedback from stakeholders and insights gained during sprint reviews and retrospectives, adapt the product backlog and adjust priorities as needed.
 - Continuously iterate through the sprint cycle, refining and improving the migration process with each iteration.
- **Integration and Testing:**
 - Throughout the project, ensure continuous integration of migrated components and conduct testing to validate functionality, data integrity, and performance.
 - Use automated testing wherever possible to streamline the testing process and maintain product quality.
- **Deployment and Go-Live:**
 - Plan for a seamless deployment of the migrated solution into the production environment, coordinating with stakeholders to minimize disruption to business operations.
 - Conduct thorough testing in the production environment before the final go-live to ensure a smooth transition.
- **Post-Implementation Support:**
 - Provide ongoing support to address any issues or concerns that arise after the migration, prioritizing and resolving them based on their impact on business operations.
 - Continuously monitor the performance and stability of the migrated solution and make necessary adjustments as needed.

Client: REPA Group (A Parts Town Unlimited Group, USA), Dusseldorf, Germany (Aug 2022 – Jun 2023)

Project: IBP, S4HANA Public Cloud Green Field Implementation

Role: Technical Project Manager

Modules: IBP, SAP PP, SAP MM, S4 HANA Public Cloud

- E2E Implementation of IBP Supply Configuration of Time Series Optimizer for generation of constrained Supply Plan
- Configuration of Unconstrained Heuristics to propagate demand from customer factories • Set up Configuration of various
 - Master Data at Customer, DC's, and Plants
- Analyzing As-Is Business Process and conduction workshop and Questionnaire for Discovery Phase with Business, Functional and Technical teams, Documentation and User Stories for Blueprint and Realization Phase.
- Experience with Scrum and Agile Process for Development, Quality check and Go Live Process and continue reporting with stakeholders and C level Executives on Risk and Actual implementation realizes.
- Optimized CPI DS Flows to reduce rename of various tasks, Customization using Time series optimizer for Deployment planning (generation of plan within frozen horizon, rough cut capacity plan, worked on configuration of complete cycle of S&OP Cycle
- Development of Planning scenarios for current and future requirements with Demand and Supply business process.
- Preparing Sample data for technical teams for custom enhancements, Data Modelling, Embedded Analytics reporting, Cloud Reporting, Data Integration through cloud DI Tool from External Source Systems, Testing and Data Quality validation, Data Migration Activities for Go Live,

- SAP Best Practices, Delivery approach Architecture and System Design documents, and Super User Training with Self Service.
- Reporting Templates related to Order, Supply and Operations (S&OP)
- IBP Integration with S4 HANA Cloud
- SAP TPM Planning and Configuration Set up, Development of Automaton process configuration.
- Configuration and set up in forecast, planning, Trend Seasonality workflow configuration for alerts.
- Support planning for UAT, Hypercare

Client: Yokogawa, Bengaluru, India (Jul 2019 – Jul 2022)

Role: Technical Project Manager

Modules: SAP BW, BTP, CAP, MM, PP, FI, SD, S4 HANA, SAP Fiori

- Directed the architectural design for implementing Output Determination using Business Rule Framework Plus (BRF+) to manage centralized business rules repository and automate business decision processes.
- Oversaw the design of CDS-based Virtual Elements and Custom Entities, bringing innovative solutions to data architecture.
- Executed the design for integrating standard and custom FIORI applications from S4 HANA On-premise systems into the BTP cloud Launchpad, showcasing expertise in cloud integration CI-CD Services.
- Developed workflow designs for sequential approval levels, enhancing process efficiency and operational workflow. Led the design of cloud-native applications in BTP using CAP, focusing on data exposure from Cloud Foundry demonstrating proficiency in cloud application architecture.
- Managed the design process of low code/no-code-based applications using annotations, employing modern methodologies to create efficient business solutions.
- Project Management and scrum Model implementation using Redmine.
- Guided the architectural design of scenario-based OData Services, both managed and unmanaged, using the RAP framework, focusing on flexible and efficient data access.

Client: Interior Logic Group (ILG), Bengaluru, India

Role: Technical Project Manager (Jun 2018 – Jun 2019)

Modules: SAC, S4 HANA, SAP BPC, SAP BW

- Architected, Designed & Developed Material management digital transformation and analytics solutions for a leading Industrial Engineering and Manufacturing Company using SAP S4 Hana & SAC for reporting.
- Designed and delivered a solution for FI Planning & Consolidation using SAP Business Planning and Consolidation and reporting using SAP BPC
- Designed Finance Optimizer solution to achieve business benefits of controlling Working Capital Leakage and Profit & Loss dashboard using SAC.
- Oversaw the conversion of BW objects from older DSO, Cubes, Multi providers, and Info sets to Advanced Data Store Objects (ADSO) and HANA Composite Providers (HCPR), including designing and optimizing extract structures for efficient data retrieval.
- Implemented Native HANA modeling techniques to optimize data processing and reporting capabilities, specifically tailored to meet custom finance reporting needs.
- Designed and developed data models within SAP BW on HANA, focusing on optimizing performance and ensuring data accuracy and consistency for custom finance reports.
- Proactively identified and resolved performance bottlenecks within SAP BW on HANA applications, optimizing query response times and system throughput for custom finance reports.

- Collaborated with finance teams to understand specific reporting needs and fine-tuned HANA models and CDS views to deliver high-performance custom financial reports.
- Created efficient data extraction and transformation processes, utilizing SAP BW ETL tools to seamlessly integrate financial data from various source systems into SAP BW on HANA.
- Customized Extract Structures within BW to capture financial data in a format suitable for CDS views, ensuring data alignment with custom reporting requirements.
- Modeled complex financial data structures in SAP HANA, incorporating Extract Structures from BW to enable seamless integration and real-time data access in CDS views.
- Collaborated with cross-functional teams to integrate SAP BW on HANA with other SAP modules (e.g., SAP ECC, SAP CRM) and external financial systems, enabling seamless data flow for custom finance reporting.
- Designed and implemented data integration solutions to ensure real-time data synchronization between BW and HANA, supporting custom reporting requirements.
- Maintained comprehensive documentation of SAP BW on HANA solutions, including technical specifications, design documents, and user guides, with a specific focus on custom finance reporting requirements.
- Documented the mapping and transformation rules applied to Extract Structures and HANA models to facilitate custom finance report development using CDS views.

Client: ArcelorMittal Group, Hyderabad, India

Role: Technical Project Manager (Feb 2017 – May 2018)

Modules: SAC, S4HANA, SAP BW

- Architect and design solutions to meet functional and technical requirements of Business Users in SAP S4 HANA, SAP BW and SAC
- Interface with the business in the development of S/4 HANA environment in the FP&A planning and Real time Consolidation. ○
- Design, test, implement and support integrations between the S/4 HANA and SAP BW
- Developed Transfer pricing, Price volume Mix (PVM) calculations including Revenue planning, Opex planning. ○
Designed and implemented transfer prices allocation in SAC data modeling and created relevant story boards.
- Developed SAC planning scenarios for Revenue, CAPEX and Opex planning.
- Determine test cases and perform unit and integrated testing as needed for system changes and Create training content and train users on application functionality.

Client: Ironshore Group, Hyderabad, India

Role: SAP BI Project Manager (Feb 2015 - Jan 2017)

Modules: SAP BW, BPC, SAP BOBJ

- Leading supporting team for User tickets, Enhancement, and daily activities.
- Modelling, Designing, Customization of extractors, customization of Info providers, DSO.
- Enhancements of Bex Reports and Open Hub Destinations.
- Delivering reports and dashboards using various tools like BOBJ, Design Studio
- Gather new enhancement request from Business and work hand in hand with Onsite team to accomplish the change requests.
- Creating connections, Universe design, Security role maintenance for reporting from Microsoft Dynamics system
- Configuring ODBC connection to SQL Server and exposing the SQL tables to Business Objects

○

Client: Sulzer Pumps, Mumbai, India

Role: SAP Migration Architect (Sep 2013 - Jan 2015)

Modules: SAP SD, SAP MM, SAP PP, SAP FICO

- Architect the cross-functional and geographic perspectives on data governance
 - Architect and Design the data auditing and data migration management.
- Implemented data quality metrics and interpret any trends on data quality within the functional area and design data load structure and automation tools to load the data using LSMW.
- Monitor business conformity to governance rules and policies.
- Drive the completion of assigned data auditing tasks.
- Protect the integrity and accuracy of data to be loaded into the SAP system.
- Articulate the impact to master data of IT design, business processes, & end user transactions
- Deliver training to educate local data analysts, business process owners, and stakeholders on data quality and data governance.

Client: eBay, San Jose, USA (Jul 2012 – Aug 2013)

Role: SAP Business Intelligence Architect

Modules: SAP BPC, SAP HANA, SAP BW, SAP BOBJ, Design Studio, WebI, Dashboard Designer

(Xcelsius), Advanced Analysis for Excel (AAE)/OLAP(AAO), Information Design Tool, BO Explorer, Business Explorer(BEx) 3.x/7.x, Tableau Desktop and Tableau Server

- Experience in working with different components of Xcelsius like Charts, Labels, scorecards, buttons, selectors, containers, text components.
- Created dashboards for Marketplaces finance and MP HR teams with Xcelsius, and Design Studio using CSS.
- Used different components in the design studio like Radio buttons, Cross tabs, Charts, combo boxes, scripting the CSS scripts to define the custom properties for the components in the design studio as per the requirements.
- Upgraded the BOBJ from 4.0 SP04 patch 05 to 4.1 SP2.
- Created dashboards with drill down feature to the more detailed WebI report.
- Worked with the Query Designer feature in the Dashboard Designer/Xcelsius to connect to BEx queries directly and UNX universe to populate data for dashboards which enhances the dashboards performance.
- Created workspaces with multiple dashboards and WebI reports and used HTML code to list the reports as per the requirement.
- Created POC using Tableau for the financial dashboards for the Marketplaces team. Used different components like filters, dropdowns, and graphs for the dashboard.
- Created many Dashboards using the new mode of connection – BICS (Business Intelligence Consumer Services), BIWS, QAAWS. Also used multiple connections in a single dashboard for better performance in the dashboards.
- Implemented HANA database (BW on HANA) and its integration with the Business Objects 4.0.
- Established the best modelling and recommended strategies for BOBJ environment on BW over HANA.
- Developed the test scripts and report validation documents for the BOBJ reports/dashboards during the HANA upgrade.
- Assisted in installing and configuring SAP BOBJ 4.0 SP2, SP04 and 4.1 SP02 and generated reports using WebI and Advanced Analysis.
- Worked closely with SAP in creating OSS messages and resolving the issues with the reports/dashboards migration during BOBJ and HANA Upgrade.
- Designed UNV Universes and connections for various reports like WebI, Analysis and Dashboards.

- Designed the UNX Universes for the various reports in the BOBJ Explorer.
- Created Mobile dashboards from WebI, Dashboard Designer, Explorer and Design Studio. Compared the
- Created many BEx queries that are needed for the reporting purposes.
- Created transformations using ABAP to get the text data and hierarchies for the APDs.
- Created user training documents and trained end users in SAP Business Objects, Workspace and building
- adhoc reports with Analysis which helps users in building their own queries, adding filters, generating reports, drilling down reports, creating charts performing business essential tasks.
- Created BEx queries for the Dashboards and created many RKF's and CKF's as per the requirement.

Client: Inter Public Group, New York, USA (May 2011 - June 2012)

Role: SAP Business Intelligence Architect

Modules: SAP-BI 7.0, ECC 6.0, ABAP/4, SD, MM, FI-CO, BOBJ 4.0, BOBJ 3.x

- Redesigned the existing complex dashboard (non-functional) into simple and functional dashboards.
- Developed the High-level design for Corporate Dashboard COR using the mockup data.
- Designed 3 different project plans for COR with different timelines and number of resources using MS Project.
- Extensive experience in linking multiple dashboards using Content Linking in the BI Launch Pad.
- Experience in working with Flash Variables in passing the multiple parameters (more than 10) between Dashboards and also between WebI and Dashboard.
- Extensive working experience with different components of Dashboard Designer like Charts, Selectors, Text, Maps and Containers.
- Developed multi layered graphs to show more than 4 indicators in a single graph.
- Experience in using different connections like LIVE OFFICE, QAAWS, BI Web Services and Query Browser to access the data depending on the requirement.
- Developed Web Intelligence reports using BW BICS Connections with Hierarchical data, RDBMS Connections with Multiple Query's.
- (.UNV) as well (.UNX). Defined various OLAP connections in SAP BICS connectivity.
- Directly used SAP BEx queries to build a WebI documents. Worked with Legacy Universes.
- Responsible for Creating/Enhancing BOBJ Universes using BW BEx Query's, retrieving data from Universes and Creating Complex, Multi-dimensional and Ad-Hoc reports according to client requirements using, Web Intelligence (WEBI).
- Experience in using IDT (Information Design Tool) used to design the Universe on more than one relational database. Also created queries using IDT.
- Extensive experience with WebI in creating queries and reports that further used in the Dashboard Designer.
- Created WebI reports on relational Database that helps in ranking purposes.
- Developed Interactive reports and dashboards using Xcelcius and WebI reports.
- Experience in using Download Doc and Open doc in order to connect the dashboards in the BI Launch pad.
- Created crosstab data in WebI and developed the WEB Services for the WebI report that can be directly used in the Dashboard Designer.

Client: Kellogg's, Chicago, IL (Dec 2009 - April 2011)

Role: SAP Business Intelligence Architect

Modules: Design Studio 1.5/1.6, Tableau Desktop 10.3, Tableau Server 10, Lumira 1.30, SAP BO 4.2, WebI, Analysis Office, Analysis OLAP

- Developed Design Studio 1.5 dashboards and advised improvements over Dashboards by analysing the existing reports and dashboard.
- Hands on experience in reports to Design Studio conversion efforts.

- Created 40 BEX Queries for Finance to support WEBI and Dashboards using Design Studio
- Held White boarding sessions with users for aligning the design requirements for Design Studio, Used Custom Code for Design Studio Developed highly complex dashboards from the mockup storyboards using SAP Design Studio.
- Experience in customizing the components by overwriting the styling properties and setup as a template across the company for all the business units or while transitioning from other Dashboarding tool.
- Developed Dashboards in Tableau Desktop and published them on to Tableau Server that allowed end users to understand the data with the usage of quick filters for on demand sales and commission information.
- Created various types of charts like Heat Maps, Geocoding, Symbol Maps, Pie Charts, Bar Charts, Tree Maps, Gantt, Circle Views, Line Charts, Area Charts, Scatter Plots, Bullet Graphs and Histograms in Tableau Desktop to provide better data visualization.
- Created interactive Dashboard and applied actions like filter, highlight and URL to Dashboard.
- Developed and reviewed custom SQL queries with use of joins clauses (inner, left, right, full) in Tableau desktop to validate and reconcile data.
- Used Custom SQL for joining the tables and selecting the required Data. Executed and tested required queries and reports before publishing.
- Creating users, groups, projects, Data connections, settings as a Tableau site administrator.
- Created Data Connections, published on Tableau Server for usage with Operational/Monitoring Dashboards.
- Developed story telling Dashboards in Tableau Desktop and published them on to Tableau Server which allowed end users to understand the data on the fly with quick filters to filter needed information.

Client: Alberto Culver, Chicago, Illinois. (Nov 2008 - Nov 2009)

Role: SAP BW Consultant

Modules: SAP BW, SAP ECC, QlikView, IBM Mainframes

- Managed a rollout project of SAP BW implementation and SAP ECC implementation.
- Managed several development projects for reporting using SAP Business Objects, QlikView
- Carried out day-to-day support activities for change request and production support task.
- Managed Offshore team for Hypercare Support.
- The underlying Legacy Systems were Cobol, Java, DB2, J2EE, MS Project as project management tool.

Client: Virtusa, Hyderabad, India (Aug 2004 - Oct 2008)

Role: SAP BW Consultant

Modules: SAP ECC, SAP BW, Bex

- Lead/Contribute to projects that design and deliver data models, Multi-dimension Business Models/OLAP cubes and dashboards in response to business requirements in SAP BW
- Communicates with business users to design and deliver dashboards using Bex reports and other Enterprise portal report user interfaces that drive business value and efficiently and effectively leverage the use of data.
- Participate/Provide inputs in architecture meetings to determine project scope, tasks, timeframe, resources to provide project estimates.
- Works with a variety of internal and external users to develop data SAP BW models and performs data design reviews with the rest of the project team as appropriate.
- Involved in data migration, data mapping, and data interface development activities.
- Develops and maintains Extract Structure and store the data in staging layer of SAP BW for data warehouse and reporting business requirements.

Certifications

SAP HANA Associate
