

Deepthi Gattupalli
Java Full Stack Developer
Ph: 475-209-6527 | E:deepthigattupalli7@gmail.com

Professional Summary:

- Java Full Stack Developer with 3 years of experience in developing end-to-end application development using JavaScript, ES6, ReactJS, Redux, Angular, Java, Spring boot, and Microservices ensuring a seamless user experience.
- Experience in designing and implementing Microservices with Spring Boot, Spring MVC, Spring Data JPA, and Hibernate ORM, enhancing scalability and modularity.
- Proficient in RESTful and SOAP API design, and documentation with Swagger Open API, ensuring standardized and interoperable communication.
- Advanced knowledge of SQL, MongoDB, PostgreSQL, and MySQL, employing Spring Data JPA for efficient data management and manipulation.
- Experience with large-scale distributed systems using JMS, Message Queues and Spring JMS Integration.
- Hands-on experience in using message brokers such as Active MQ and RabbitMQ.
- Experience with web/application servers Web Sphere, Web Logic, Jetty, JBoss, and Tomcat Server.
- Designed scalable cloud architectures using AWS EC2, S3, and RDS, ensuring high availability and fault tolerance for web applications.
- Worked on various phases of SDLC and Agile methodology and well conversant with requirement gathering, client-user case studies, Analysis, technical Design document signoffs, Coding, enhancement, Testing and production deployment.

Technical Skills

J2EE Technologies	Servlets, JSP, JDBC, Maven, Multi-threading
Frameworks	HTML, CSS, Bootstrap, JavaScript, Typescript, ES6, React JS, Redux, Ajax, Angular Microservices, Spring Boot, Spring MCV, Spring Data, JPA, Hibernate ORM, Node JS, REST API, D3.js, Vue.js, Flask
Languages	Java, Python, C++, Golang
Web Services	RESTful, SOAP, WSDL, WADL, Swagger Open API
CI/CD& Tools	Jenkins,
Databases	SQL, MongoDB, PostgreSQL, MySQL, Dynamo DB, Amazon RDS, DB2
Testing tools	Junit, Cucumber, Selenium
Cloud & Deployment	AWS (EC2, S3, route 53, Cloud Watch, Cloud Trail, AWS Lambda), Docker, Kubernetes
Web Server	Apache Tomcat, WebLogic, Jetty
Other Tools	Jira, Git, Bitbucket, SonarQube, POSTMan, Humming Bird, Open text, Stored Procedure, SQL developer, DB, Uniserv, Microsoft Visio.

Education:

Masters in Computer Science from University of Bridgeport, Bridgeport, CT – USA.
Bachelors in Computer Science from JNTUK University - India

Professional Experience:

Client: Kaiser Permanente, Oakland, CA Mar 2023 – Current

Role: Java Full Stack Developer

Responsibilities:

- Applied normalization techniques in MySQL to streamline the database, eliminating redundancy and ensuring efficient storage. Created Restful API web services using Node JS and Express JS; for storing and displaying test results, the full complement of Express, Angular JS, Node JS, and Mongo DB was used.
- Implemented comprehensive monitoring and logging mechanisms for each microservice, facilitating real-time analysis, issue detection, and performance optimization.
- Leveraged Kafka for real-time data streaming, allowing for instantaneous communication and updates across various components of the wealth management application.
- Implemented centralized logging and monitoring using AWS CloudWatch, allowing for real-time insights into application performance, logs, and resource utilization.
- Successfully integrated third-party financial APIs, realizing a 15% reduction in transaction time, and enhancing overall data accuracy.
- Worked with the team in developing terraform scripts to start the common services, the secret management tool Vault, the configuration management tool Chef, and the CI/CD tool Jenkins.
- Utilized AWS Lambda for serverless solutions, while AWS Cloud Watch was used for alarms. The functions were activated when the database tables were modified.
- Crafted complex queries for NoSQL MongoDB, enabling dynamic schema designs and leveraging Automatic Sharding for scalable data distribution across multiple servers.
- Spearheaded the development of a robust wealth management application at Northern Trust, employing Java, Spring Boot for backend logic, and Angular for responsive frontend interfaces.

Client: USAA, San Antonio, TX Aug 2022 – Feb 2023

Role: Java Full Stack Developer

Responsibilities:

- Designed and implemented backend services using Spring Boot 2.7 and Java 11, enabling RESTful communication between microservices.
- Developed dynamic and responsive web applications with Angular 15, improving user interaction and experience.
- Integrated backend with MySQL 8.0 and implemented optimized queries, resulting in a 15% reduction in database load.
- Deployed and monitored microservices on AWS ECS, utilizing AWS CloudWatch for real-time monitoring.
- Automated infrastructure setup using Terraform, reducing the time required for environment provisioning by 40%.
- Implemented Apache Kafka 3.5 for efficient communication between services, resulting in a 25% increase in throughput.
- Conducted comprehensive API testing using TestNG and Postman, ensuring a 98% API success rate.
- Implemented Redis 7.0 for caching, reducing latency by 20% and enhancing application performance.
- Contributed to Agile Scrum ceremonies, including sprint planning, stand-ups, and retrospectives, ensuring efficient

delivery of features.

- Assisted in production issue resolution within SLAs, ensuring 100% adherence to operational metrics.
- Integrated Prometheus and Grafana for application health monitoring and reporting, ensuring 99.9% system uptime.
- Developed SQL queries, stored procedures, & modified the database structure as needed for new features using PostgreSQL.
- Used Eclipse as an IDE tool to develop the application & JIRA for bug & issue tracking.

Client: Access Health Care, India FEB 2020 – DEC 2021

Role: Java Full Stack Developer

Responsibilities:

- Developed several projects from scratch using traditional Cobol, JCL, PROC, CICS MAPS and DB2 environment.
- Debugging Batch and CICS abends through expeditor and abended processes.
- Developed different online and batch modules in sales domain for management and distribution of BMW vehicles of North America.
- End to end process developed to convert and FTP mainframe files to Third party Vendor Emdeon server.
- Coordinator on TRR (Transaction Request Reply) Project to handle daily request and response files from and to CMS (Center of Medicare and Medicaid Service).
- Proactively worked on Migration projects which includes replacing existing Cobol programs with new modules created in new technologies like Java, MQ series etc
- Designed and developed new CICS screens for business users to interact with database thru Front End applications.
- Worked on Major Tracking project with BAM (Business Activity Monitor) tool. Which is built with both Mainframe and JAVA technologies.
- Developed Communicator based letter generation process to streamline automated Letter Trigger.
- UAT test cycle preparation, automation and monitoring project releases.
- Experience on Customer Care portal team to receive customer request through front end application and IVR and load them to DB2 tables.
