

DEEPTHI KATTA

FULL STACK. NET DEVELOPER

(636)-439-4192, Kattadee23@gmail.com

Summary:

- Over 4 years of comprehensive experience in developing robust and scalable web applications utilizing the .NET Framework and .NET Core, with an emphasis on performance optimization, maintainability, and cross-platform compatibility.
- Strong expertise in both front-end (Angular, React, JavaScript, jQuery) and back-end (ASP.NET MVC, Web API) development, building end-to-end solutions that provide a seamless user experience.
- Proficient in C# programming language, utilizing advanced features such as LINQ, async/await, and delegates to create efficient, high-performance solutions that meet business requirements.
- Extensive experience designing and developing RESTful APIs using ASP.NET Web API, ensuring secure, scalable, and efficient communication between systems.
- Proficient in working with SQL Server, including designing relational databases, writing optimized queries, stored procedures, and ensuring data integrity through normalization and indexing.
- Deep understanding of Entity Framework and LINQ for data access, working with both code-first and database-first approaches to manage complex data models and business logic.
- Expert in building responsive, mobile-friendly web interfaces using HTML5, CSS3, Bootstrap, and modern JavaScript frameworks (Angular/React) for dynamic front-end experiences.
- Extensive experience deploying, managing, and optimizing cloud-based applications using Microsoft Azure, including App Services, Azure SQL, Functions, and Storage solutions.
- Implemented OAuth2, OpenID Connect, JWT, and ASP.NET Identity to manage secure authentication and authorization workflows for role-based access control.
- Experience setting up and managing CI/CD pipelines in Azure DevOps for automating builds, testing, and deployments to streamline the development lifecycle.
- Proficient in Git for version control, using GitFlow for managing branches and collaborating on large-scale projects with distributed teams.
- Worked in Agile environments, actively participating in sprint planning, backlog refinement, and daily stand-ups to ensure timely delivery of features and continuous improvement.
- Experience in containerizing .NET Core applications using Docker to ensure consistency across development, testing, and production environments, as well as improving deployment efficiency.
- Skilled in writing unit tests using frameworks like xUnit, NUnit, and MS Test. Familiar with Test-Driven Development (TDD) practices to ensure code quality and reduce bugs.
- Performance Tuning & Optimization: Experience optimizing application performance by improving database queries, using caching mechanisms like Redis, and refactoring code for speed and efficiency.
- Proficient in developing cross-platform applications using .NET Core, ensuring compatibility across Windows, Linux, and macOS, with a focus on leveraging cloud-native technologies.
- Extensive experience integrating third-party services and APIs, including payment gateways, social media platforms, and other external services, ensuring smooth interaction between systems.
- Expertise in implementing security best practices to prevent vulnerabilities such as SQL injection, XSS, and CSRF, ensuring secure handling of user data.
- Dependency Injection: Strong knowledge of using Dependency Injection (DI) in .NET to promote loose coupling and facilitate unit testing and code maintainability.
- Experience using modern JavaScript frameworks such as Angular and React to build highly responsive front-end applications that integrate seamlessly with back-end APIs.
- Experience implementing API gateways like Ocelot or Azure API Management for managing and routing requests in microservices-based architectures.

- Excellent team collaboration skills, working closely with developers, testers, product managers, and other stakeholders to deliver high-quality solutions aligned with business goals.
- Familiar with DevOps tools and practices, including continuous integration, infrastructure as code (IaC), and monitoring for more efficient development and deployment cycles.

Education:

- Masters in Computer Science from Wichita State University, KS.

Technical Skills:

Programming Languages	C#, .NET Core, ASP.NET, JavaScript, TypeScript
Frontend Development	HTML5, CSS3, Bootstrap, Angular, React, Blazor, jQuery
Backend Development	.NET Core, ASP.NET MVC, Web API, Entity Framework, LINQ
Database Management	SQL Server, MySQL, PostgreSQL, MongoDB
Cloud Solutions	Microsoft Azure (App Services, Azure Functions, Storage, Azure DevOps)
DevOps & CI/CD	Azure DevOps, Jenkins, Docker, Kubernetes, Git
Microservices	.NET Core, Docker, REST APIs, RabbitMQ, Dapr
Testing Frameworks	XUnit, NUnit, Selenium, Postman
Web Services	REST, SOAP, GraphQL
Agile Methodologies	Scrum, Kanban, Agile

Professional Experience:

Client – HCA Health Care, Nashville, TN
Role: Full Stack. Net Developer

March 2022 to Present

Responsibilities:

- Design and build responsive, scalable web applications leveraging .NET Core, ASP.NET, and C#, along with frontend technologies such as Angular, React, or Blazor for an optimal user experience.
- Build reliable RESTful APIs, integrate external services, and implement secure communication methods such as OAuth, JWT, or Identity Server to facilitate safe and efficient data transmission between the client and server.
- Design database schemas, optimize queries, and manage data operations using SQL Server, MySQL, PostgreSQL, and MongoDB.
- Design, develop, and deploy microservices-based applications leveraging Docker, Kubernetes, and .NET Core for scalable distributed systems.
- Write clean, maintainable code adhering to SOLID principles, and perform unit and integration testing using frameworks like xUnit, NUnit, and Moq.
- Deploy applications on Microsoft Azure services (App Services, Azure Functions, etc.) and manage continuous integration and delivery pipelines using Azure DevOps or Jenkins.

- Implement dynamic and responsive UI components using HTML5, CSS3, JavaScript, TypeScript, and frontend frameworks like Angular or React, ensuring optimal performance.
- Collaborate with cross-functional teams using Git for version control, GitHub or Bitbucket for repository management, and agile tools like Jira or Azure Boards.
- Troubleshooting and Debugging: Debug and troubleshoot application issues across the entire stack, resolving bugs efficiently to ensure system stability and performance.
- Implement security best practices, including input validation, authentication, authorization (OAuth, JWT), and protection against common vulnerabilities such as XSS and SQL injection.
- Analyze and optimize performance bottlenecks across the application stack (frontend, backend, database) to ensure fast and efficient operation.
- Build and maintain automated CI/CD pipelines using Azure DevOps, Jenkins, or similar tools to ensure continuous integration and deployment.
- Use caching techniques (e.g., Redis, Memory Cache) to improve application speed and reduce server load by minimizing database calls for frequently accessed data.
- Develop, package, and deploy applications using Docker for containerization and manage them using Kubernetes for scalability and fault tolerance.
- Create detailed documentation for developed features, APIs, and application logic to facilitate better understanding for future development and team collaboration.
- Test and ensure web applications work seamlessly across multiple browsers and devices, applying responsive design techniques where necessary.
- Integrate Third-Party APIs and Services: Implement external services such as payment gateways, social logins, and analytics APIs, ensuring proper integration and data flow.
- Use monitoring tools (e.g., Azure Monitor, Application Insights) to track performance, troubleshoot production issues, and maintain system uptime.
- Assist and mentor junior developers by reviewing their code, guiding them on best practices, and helping with problem-solving during development.
- Actively participate in peer code reviews to ensure quality and adherence to coding standards, and suggest improvements or optimizations where necessary.

Environment: .NET Core, ASP.NET, C#, JavaScript, TypeScript, HTML5, CSS3, Angular, React, Blazor, RESTful APIs, Microservices, Identity Server, OAuth, JWT, SQL Server, MySQL, PostgreSQL, MongoDB, Docker, Kubernetes, Azure DevOps, Jenkins, Git, GitHub, Bitbucket, xUnit, NUnit, Moq, Azure Monitor, Application Insights, Azure Monitor, Application Insights

Client: American Express (Remote)

April 2020 to Nov 2021

Role: .Net developer

Responsibilities:

- Design, develop, and maintain full-stack applications using the .NET framework, ensuring the integration of frontend and backend components. Collaborate with product managers and stakeholders to deliver high-quality software that meets user needs and business goals.
- Engage in thorough discussions with stakeholders, product owners, and users to gather and analyze requirements. Translate these requirements into technical specifications and functional design documents to ensure clear understanding and alignment among all team members.
- Create and implement engaging user interfaces using modern frontend frameworks such as Angular, React, or Vue.js. Focus on enhancing user experience through intuitive design, responsiveness, and accessibility while ensuring cross-browser compatibility.
- Develop and maintain RESTful APIs and microservices using ASP.NET Core, ensuring robust and scalable backend services. Implement best practices for API design, including versioning, documentation, and error handling to facilitate ease of use and maintainability.

- Design, implement, and optimize relational and NoSQL databases (e.g., SQL Server, MongoDB) to ensure efficient data storage and retrieval. Write complex SQL queries, stored procedures, and perform database normalization to enhance performance and data integrity.
- Implement industry-standard security measures to protect applications and user data. This includes setting up authentication and authorization mechanisms, data encryption, and input validation to safeguard against common vulnerabilities such as SQL injection and cross-site scripting (XSS).
- Utilize Git for source control to manage code versions and collaborate with team members. Establish branching strategies, pull request workflows, and ensure effective code merging practices to maintain a clean and organized repository.
- Write unit, integration, and end-to-end tests using frameworks such as NUnit, xUnit, and Selenium to ensure comprehensive test coverage and high-quality code. Employ Test-Driven Development (TDD) principles to enhance code reliability and reduce regression issues.
- Manage and streamline the deployment process by setting up CI/CD pipelines using Azure DevOps, Jenkins, or GitHub Actions. Automate build, test, and deployment processes to enable frequent and reliable releases of application updates.
- Implement logging and monitoring solutions to track application health, performance metrics, and error reporting. Use tools such as Azure Monitor and Application Insights to gain insights into application behavior and facilitate proactive troubleshooting.
- Technical Documentation: Create and maintain comprehensive technical documentation for application features, APIs, and deployment processes. Ensure that documentation is up to date and easily accessible to facilitate knowledge transfer and onboarding of new team members.
- Collaboration with UI/UX Designers: Work closely with UI/UX designers to ensure accurate implementation of designs and provide feedback on usability and functionality. Participate in design reviews and iterate on designs based on user feedback and testing results.
- Responsive Design Implementation: Implement responsive web design principles to ensure applications function seamlessly across a variety of devices and screen sizes. Use CSS frameworks like Bootstrap or custom media queries to achieve an optimal user experience.

Environment: .NET Framework, ASP.NET Core, Angular, React, Vue.js, HTML5, CSS3, Bootstrap, RESTful APIs, Microservices, ASP.NET Core, SQL Server, MongoDB, Database Normalization, SQL Query Optimization, Git, Branching Strategies, Pull Request Workflows, NUnit, xUnit, Selenium, Test-Driven Development (TDD), Azure DevOps, Jenkins, GitHub Actions
