

Devisree Pandranki

Sr.DevOps Engineer

E-Mail: devisreepandranki25@gmail.com

Location: Tampa, FL

Mobile: 813-498-9948

in: www.linkedin.com/in/devisree-pandranki-b29694139

Professional Summary

- Cloud and DevOps Engineer with **8+ years** of experience in designing, implementing, and optimizing cloud-based infrastructure and CI/CD pipelines. Proven expertise in automation, containerization, and monitoring tools to enhance system reliability and delivery speed. Skilled at collaborating across teams to drive operational efficiency and deliver scalable solutions.
- Proficient in various development methodologies, including Waterfall, Scrum, Agile, and hybrid approaches.
- Ability to identify and gather requirements to define a solution to build and operate the multiple applications on AWS
- Experience in maintaining AWS (Amazon Web Services) EC2 (Elastic Cloud Computing) resources like instances, EBS volumes, snapshots, Elastic Load Balancers (ELB), VPC, AMI's, Lambda, security Groups, elastic IP's, EBS, RDS, IAM, Key pairs and Amazon Cloud watch for different zones in different environments and API Gateways.
- Setting up databases in AWS using RDS, storage using S3 buckets and configuring instance backup to S3 bucket
- Good Experience in implemented Continuous Integration/Continuous Deployment Automation Process using various tools like Jenkins
- Extensive experience in setting up the CI/CD pipelines using Jenkins, Maven, GitHub, Terraform and AWS
- Used Azure Kubernetes Service to deploy a managed Kubernetes cluster in Azure and created an AKS cluster in the Azure portal, with the Azure CLI, also used template-driven deployment options such as Resource Manager templates and Terraform
- Extensible experience in setting up Baselines, Branching, Merging and Automation Processes using Shell and Python Batch Scripts.
- Experienced in trouble shooting, Configuring and Deploying Enterprise Applications in WebSphere, WebLogic and JBOSS/Tomcat as well
- Proficient in managing the source code control of multiple development efforts using GIT
- Good interaction with developers, managers, and team members to coordinated job tasks and strong commitment to work.
- Good analytical, problem solving, communication skills and have the ability to work either independently with little or no supervision or as a member of a team.

Certifications

- AZ-104 Microsoft Azure Administrator
- AMAZON AWS Certified Solution Architect-Associate
- RHCSA - Redhat Certified System Administrator
- Microsoft Certified: Azure Solutions Architect Expert

Technical Skills Set

- Cloud Platforms: AWS, Azure
- Containerization & Orchestration: Docker, Kubernetes
- Infrastructure as Code (IaC): Terraform, CloudFormation
- CI/CD Tools : Jenkins, GitLab CI/CD, Azure DevOps
- Programming/Scripting: Bash, Python
- Version Control: Git, GitHub, GitLab
- Web servers: Apache Tomcat, Websphere, Web logic and JBOSS
- Monitoring & Logging: Splunk, Prometheus, Grafana, Nagios, CloudWatch

- APM tools: Dynatrace, Splunk APM, New Relic
Operating Systems: Linux (RHEL, Ubuntu, CentOS), Windows Server
Databases: Oracle, MySQL
- Ticketing tool: Service Now

Work Experience

Sr.DevOps Engineer

ITG Technologies Inc

04/2024 – present

Responsibilities:

- I manage both Linux and Windows-based infrastructure, where I oversee servers, troubleshoot issues, and perform complex tasks with a high degree of skill. This includes creating instances with all necessary prerequisites for applications, ensuring security software is in place, and implementing load balancing for optimal performance.
- Provide tier 2 and 3 support for AWS-based applications, resolving complex customer issues and maintaining **99.9% uptime**
- I am actively involved in using Git for code reviews to maintain high code quality and ensure adherence to best practices. This includes reviewing developer's changes, providing feedback, and suggesting improvements through pull requests. When troubleshooting application issues, Git's ability to track code history allows me to pinpoint when bugs were introduced, analyze relevant code changes, and revert to a stable version if necessary
- Collaborate with development teams to optimize application performance and reduce cloud infrastructure costs by 25%
- Supporting cloud-based applications hosted on AWS, addressing customer incidents and requests in a timely manner
- Designed and implemented auto-scaling groups to optimize resource utilization and reduce costs by 30%
- Managed and maintained Kubernetes clusters, ensuring high availability and scalability for containerized applications. Implemented rolling updates and automatic scaling to accommodate increased workloads during peak usage periods
- Debug quickly to resolve complex software issues and bugs, ensuring less system downtime. Use GIT for version control and JIRA for precise issues tracking, significantly minimizing operational disruptions
- Automate the deployment process by working on configuration management, which involves writing Ansible Playbooks for automating the infrastructure deployment-related tasks
- Used Jenkins as a continuous integration tool to create new jobs, manage required plugins, configure the jobs selecting required source code management tool, build trigger, build system, post build actions and notifying the build reports
- Collaborated with cross-functional teams to resolve application performance issues.
- AWS services administration: EC2, IAM, VPC, Route 53, ECS, RDS, S3, Lambda, CodeBuild, CodeDeploy
Work with Security division to design and manage IAM roles for users, vendors and other third-party vendors

Sr.DevOps Engineer

United Health Group

05/2018 - 02/2024

Responsibilities:

- Maintained a 99% uptime of 40+ UNIX servers
- Responsible for implementing various development, testing, and automation tools, as well as IT infrastructure
- Implemented monitoring and logging solutions to ensure the reliability, performance, and security of software applications in production environments. Utilizing tools such as Prometheus, Grafana, and Splunk, I collect, analyze, visualize, and alert on various metrics, logs, and events generated by applications and infrastructure components.
- Achieved a **cost reduction by 70%** for the application through infrastructure optimization. Analyzed resource utilization metrics, including CPU, memory, disk space, and network usage across servers, to identify cost-saving opportunities. Implemented resource right-sizing strategies without compromising performance or reliability and continuously monitored resource usage to improve operational efficiency
- Mentored junior DevOps engineers in the team, doing code review and learning new things
- Served as the Subject Matter Expert (SME) for the team, focusing on improving and monitoring infrastructure
- Automated restarts using Jenkins pipelines by designing and implementing a Jenkins Pipeline that triggers a controlled restart of services, servers or applications. This saved 70% of time
- Conducting risk reviews for the team prior to deployments to ensure all potential issues are identified and addressed
- Facilitated seamless communication between the audit team and internal stakeholders, coordinating efforts to meet audit requirements for the application. Gathered and submitted comprehensive documentation to demonstrate compliance with security standards.

- Managing change processes, attending CAB (Change Advisory Board) meetings, and executing scheduled changes and deployments. The process initiates with identifying the need for a change, which may arise from a new feature request, a bug fix, or an infrastructure upgrade.
- Performed Java version upgrades quarterly to ensure that all application servers are consistently operating on the most recent stable and secure releases of Java. ensuring that applications can leverage the latest features without encountering compatibility issues
- Participated in 24x7 on-call rotation, ensuring prompt resolution of critical issues
- Implement and manage CI/CD pipelines using Jenkins and Git, reducing deployment times by 40%
- Developed a shell script to organize 8.2 million patient records by moving 100,000 records into separate folders sequentially. This streamlined the organization process and ensured easy reference for future use.
- Managing IAM accounts (with MFA) and IAM policies to meet security audit & compliance requirements.
- Worked on Pega Deployment Manager can streamline the promotion of agent schedules, listener configurations, and rules between environments
- Configured VPCs and implemented Peering's on to it
- Responsible for S3 Buckets creation, Policies and IAM role-based policies
- Build the servers using AWS & Importing volumes
- Responsible for creating monitors, alarms and notifications for EC2 hosts using Cloud Watch
- Experience on Azure CLI & good amount of understanding & modifying terraform
- Configuring Backup in Azure for taking backup of VM using Azure native backup tool

Cloud Engineer

Usha Martin Technologies

04/2017 - 05/2018

Responsibilities:

- Provided tier 3 support for enterprise-level applications hosted on AWS
- maintaining 99.9% uptime for all the application servers
- Optimized AWS resource allocation, resulting in a 25% reduction in monthly cloud spending
- Conducted root cause analysis and resolved critical production issues, minimizing downtime
- Implemented monitoring solutions using CloudWatch and Splunk, improving incident response time by 40%
- Worked exclusively on making applications more scalable and highly available system in AWS (load balancing) with full automation
- Infra-structure development on AWS using various services like EC2, S3, RDS, Route53, Cloud Front, Cloud Watch, IAM, VPC etc.
- Deployed containerized applications using Docker and Kubernetes, reducing application startup times
- Automated the annual database password change process using shell scripts
- Used Jenkins to perform automated Builds and Deployments.
- Deployed Java applications to application servers in agile continuous integration environment and automated the entire process.
- Expert in User Management and Plug-in Management for Jenkins.
- Deployed the applications to Tomcat Application Server and static content to Apache web servers.

Unix/Linux Administrator

IBM India Pvt.Ltd

04/2016 - 02/2017

Responsibilities:

- Installation, Configuration of RHEL 6&7, CentOS
- Proficiency in installation, upgrade, troubleshooting on operating system
- Performed Disk management with the help of LVM (Logical Volume Manager)
- Performed Health scan activities as per the security policies signed by the customer
- Remediating the Deviations/Violations on the servers with a change
- Demonstrated excellence in building & implementation of ITIL. adept in aligning IT processes with ITIL by establishing Change, Incident and Problem Management meetings and decreasing turnaround time

- Performed Package administration on Linux using rpm, yum and satellite server
- File system management
- Raising Tickets on various issues with the related team or with the customers
- Swap space management
- Planning for job schedule & implementation using CRON and AT. Watching system logs for problems
- Installation of patches and packages in Redhat Linux, SUSE Linux & Oracle Linux
- Configuring IP and Checks the CPU utilization
- Basic creation and troubleshooting on scripting like Shell

Scholastics

B.Tech & M.Tech in Information Technology 2008 -2013

Andhra University College of Engg & Tech, Visakhapatnam, India

Acheivements

- Received quarterly **Best Performance Awards**, consistently exceeding performance expectations, along with monetary rewards added to the portfolio.
- Earned commendations from stakeholders for effectively resolving application issues.
