

Dhivya Sambath

Senior Software Developer

+1 (337) 554-0045 | dhivyasambath1@gmail.com | Dallas, TX | [LinkedIn](#)

PROFESSIONAL SUMMARY

Accomplished Software Engineer with extensive experience in backend development, API integration, and cloud solutions, specializing in healthcare, utilities, and energy domains. Proficient in Java, Spring Boot, and AWS, with a proven track record of developing scalable microservices architectures, optimizing data management, and ensuring secure, compliant solutions. Skilled in building robust RESTful APIs, automating data extraction processes, and enhancing system reliability through efficient use of SQL, Python, and Spring Security. Known for strong analytical skills, adherence to Test-Driven Development, and dedication to delivering high-quality, user-centered applications. Effective team collaborator with a commitment to aligning technical implementations with business needs, supported by a foundation in Agile and project management practices. Holds an AWS Cloud Practitioner certification, emphasizing expertise in modern cloud technologies.

CORE COMPETENCIES

Java | Spring Boot | Python | AWS | Spring JPA | Spring Security | Angular | HTML5 | CSS | REST API | MySQL | MSSQL | Agile | Maven | GIT | Junit | Mockito | JIRA | AWS EC2 | AWS Lambda | AWS SNS | AWS SQS | DynamoDB | Amazon S3 | FHIR | Pandas | Apache Kafka | Microservices | Linux | Logging | Project Management | Communication | Leadership | Time Management | Adaptability | Problem Solving | Teamwork | Creativity

EXPERIENCE

UPMC, Pittsburgh, PA Software Engineer

July 2024 – Current

- Developed and optimized RESTful APIs using Spring Boot to support seamless communication between the MyUPMC portal and electronic health record systems, ensuring reliable data access for patients and providers.
- Used AWS services such as EC2, S3, and RDS for scalable and secure cloud infrastructure, optimizing the storage and retrieval of large healthcare datasets in a cost-efficient manner.
- Utilized SQL for complex query development and optimized database interactions to ensure efficient data retrieval, supporting real-time updates in patient records and analytics dashboards.
- Designed and implemented FHIR resources (Patient, Encounter, Observation) for seamless data sharing within the healthcare ecosystem.
- Implemented Java and Spring Security for authentication and authorization, safeguarding sensitive patient information and maintaining compliance with healthcare privacy standards like HIPAA.
- Designed scalable, microservices-based architectures to enable modular development and efficient scaling, improving system flexibility and supporting high-volume data requests.
- Integrated FHIR APIs with MyUPMC portal to improve clinical decision-making and patient care outcomes.
- Built and maintained real-time data analytics dashboards, using Java and Python, to provide actionable insights for clinical decision-making and operational improvements.
- Build user interfaces using Angular, ensuring responsiveness and interactivity through CSS3 and HTML5.
- Set up CI/CD pipelines with Jenkins and Docker, streamlining the deployment process for updates and ensuring consistent performance and security across environments.
- Worked closely with cross-functional teams, including data scientists, Cloud engineers, and UI/UX designers, to align technical solutions with business needs, facilitating effective communication and collaborative problem-solving.
- Conducted thorough unit and integration testing using JUnit and Mockito, ensuring high code quality and reliability in both backend and frontend modules for a seamless user experience.

CGI, India Senior Software Engineer

Oct 2023 - Apr 2024

- Worked for Cigna on the UCMCM (Utilization Management and Care Management) project, driving advancements in healthcare automation and data management by utilizing AWS cloud services, asynchronous processing, and robust testing strategies.
- Developed and maintained scalable applications using key AWS services, including Lambda, SNS, SQS, DynamoDB, EC2, and S3, optimizing healthcare workflows in the cloud.
- Implemented JPA with Hibernate, enabling seamless object-relational mapping and enhancing the efficiency of database operations in line with enterprise standards.

- Utilized the FHIR library to generate healthcare-focused components such as Questionnaires, Questionnaire Responses, and Care Plans, aligning with industry standards for healthcare data.
- Integrated Apache Kafka for asynchronous messaging, which improved system reliability and scalability by decoupling components and facilitating real-time data streaming.
- Automated JSON-to-Excel data conversion using Python Pandas, supporting efficient reporting and communication by streamlining email data processing workflows.
- Designed and implemented core application components for email notifications, facilitating manual process flows essential for healthcare service updates.
- Collaborate with UI/UX designers to implement visually appealing and intuitive designs. Use CSS3 for styling, animations, and transitions to enhance the user experience.
- Applied Test-Driven Development (TDD) principles with JUnit and Mockito, achieving 90% test coverage and ensuring code quality and robustness throughout the development lifecycle.
- Enhanced system reliability by leveraging AWS S3 for secure and scalable storage solutions, ensuring data accessibility and compliance in a healthcare setting.
- Collaborated with data analysts and stakeholders to build custom SQL reports, delivering insights that directly supported business goals and user requirements.
- Built and deployed AWS Lambda functions for on-demand processing tasks, reducing resource costs and improving the system's responsiveness.
- Collaborated closely with cross-functional teams, ensuring alignment of technical implementations with business requirements in the healthcare domain, leading to streamlined utilization and care management processes.

Relevantz Technology, India **Software Engineer**

Feb 2022 – Sep 2023

- Developed RESTful APIs using Spring Boot to support core functionalities, enhancing the responsiveness and scalability of Hydro Ottawa's electricity website.
- Utilized Java Stream API for efficient data manipulation, ensuring smooth processing of large datasets critical to billing operations.
- Led the upgrade of legacy Java applications to the latest Java versions, incorporating modern language features and improving application performance.
- Implemented a microservices architecture using Spring Boot and integrated Spring Security, strengthening application security with robust authentication and authorization.
- Designed and developed the base setup of the project with foundational functionalities, aligning with customer specifications and project goals.
- Developed middleware layers to seamlessly integrate third-party APIs, enhancing the application's ability to communicate with external services.
- Created comprehensive API documentation using Swagger OpenAPI, streamlining developer access and facilitating faster integration.
- Integrated SLF4J and Logback logging frameworks to monitor application behavior, improve debugging, and support proactive maintenance.
- Contributed to end-to-end coding, unit testing, and creation of functional specifications to ensure a high-quality, user-focused application.
- Worked closely with cross-functional teams, aligning technical deliverables with customer requirements and project objectives to ensure successful implementation

Urjanet Energy Solutions, India **Software Engineer**

Sep 2017 – May 2020

- Developed and maintained customized templates in Java to automate data extraction from utility bills for diverse clients, including Time Warner, Enernoc, and Amazon, ensuring accurate billing information retrieval.
- Implemented Java 8 features like Streams and Lambdas in backend code to modernize and optimize data extraction templates, boosting efficiency and maintainability.
- Refactored and optimized backend code generated by internal tools, improving readability and adaptability, and making the codebase more streamlined for ongoing maintenance.
- Migrated legacy Java templates to newer versions, upgrading deprecated methods to align with Java 8 standards, enhancing processing efficiency and backend stability.

- Automated frontend data fetching workflows by developing scripts to navigate client websites and retrieve utility bills, enhancing the overall process of data acquisition.
- Enhanced front-end accessibility by designing interactive data extraction dashboards, allowing team members to view extraction progress and troubleshoot issues in real time.
- Conducted rigorous unit and integration testing for backend components to validate data extraction accuracy, reducing errors and ensuring reliable processing of utility bills.
- Collaborated with frontend and cross-functional teams to resolve data inconsistencies, ensuring seamless integration between front-end displays and backend data processing workflows.
- Documented technical specifications and workflows, providing clear guidelines for backend processes and offering onboarding support for new team members.
- Led code reviews and performance tuning across both frontend and backend components, maintaining high standards in software design, quality, and performance optimization.

EDUCATION AND CERTIFICATIONS

Bachelor of Engineering in Computer Science

Anna University, Chennai (India)

Apr 2018

AWS Certified Cloud Practitioner ([Click to view credentials](#))
