

Roles

- IT Business Analyst
- Business System Analyst
- Business Analyst

Project Management

- Project Management/Coordination – Initiation, Planning, Execution, Controlling and Closing
- Presentation Techniques
- Resource Management
- Used SDLC & Agile Methodologies
- Salesforce

Analysis/Design

- Business analysis / Requirements Determination
- GAP analysis
- Rapid Application Development (RAD)
- Joint Application Design (JAD)
- Rational unified process (RUP)
- Cost/Benefit Analysis

Quality Assurance

- Test plans and test scripts development for User Acceptance testing (UAT)
- Defect tracking & management
- TFS/ ADO, Quality Center, Jira, Xray, ALM and testing frameworks.

Education

- Masters in business Administration - Information Technology
- New Zealand Diploma in Business Management
- Bachelors in Commerce

Experience Summary

- Over 10+ years of experience as an IT Business Analyst.
- An innovative business professional with ability to develop creative solutions for complex problems
- Comprehensive knowledge and a practical exposure to Agile and Waterfall Methodology having thorough understanding of various phases like Requirements, Analysis/Design, Development and Testing.
- Extensive knowledge of standard SDLC methodologies, including RUP, Prototype and Spiral
- Proficient in Requirement Gathering Techniques ranging from Interviews, Questionnaires, Joint Application Design (JAD) sessions, Job Shadowing to Storyboarding and Prototyping.
- Strong experience with Scrum methodology and well versed in writing user stories.
- Experience with Unified Modeling Language (UML) diagrams such as Use Cases, Activity Diagrams, Data Flow Diagram, and Process Flow Diagram using Visio and Axure.
- Expertise in conducting GAP analysis, Current state vs Future state analysis, SWOT analysis, Risk analysis, Cost Benefit analysis and preparing training manuals.
- Highly skilled in problem solving and decision making, leadership and interpersonal skills
- Good understanding of both back-end and front-end development.
- Creating and maintaining project migration schedule with project documentation requirements.
- Worked on different RDBMS modern database like SQL Server, and MS Access.
- Experienced with JSON, XML and API.
- Worked on multiple projects involving number of impacted web services and e-commerce.
- Expertise in application development projects- .com space -- Worked with Business/Product owners to create road maps, processing reengineering to map existing processes to future state processes, user stories, acceptance criteria etc.
- Expertise in performing System, Acceptance, Regression, Integration and Functionality Testing.
- Conducted User Acceptance Testing (UAT) to ensure all the business requirements have been fulfilled by the application.
- Experienced in creating QA Test Strategy, QA Test Plan, QA Test Cases, QA Test Closure, Defect documentation, etc.

TECHNICAL SKILLS:

Methodologies	Agile Scrum, Kanban, Waterfall, Rational Unified Process(RUP), UML
Testing Tools/Suite	Selenium IDE/Webdriver, QTP/UFT, WinRunner, LoadRunner
Defect tracking /Test Management Tools	JIRA, MS Visual Studio 2010, Microsoft Test Manager 2010/2011, HP-QC/ALM, Bugzilla, Test Director
Operating Systems	Windows, UNIX (Solaris, Linux)
Databases	SQLServer 2008/2005/2000, Oracle 11g/10g, MS Access
Web Technologies	SQL, C#, HTM, CSS, XM, Ruby, Java Script, Dreamweaver, ActionScript, Flash
Other tools and Techs	JIRA, Workfront, Service now, MS Project, Version 1, Excel, TOAD, Universal SQL, Axure, Invision, MS VISIO, SharePoint, Salesforce, Atlassian Suite, Confluence, Hipchat, SLACK, AEM, Azure DevOps, SharePoint, Varonis, Adobe Analytics, MS Office

Work Experience:

Octahedron LLC – Minneapolis, MN

RSM US LLP

Role: Sr Business System Analyst/PO

May 2022 to December 2024

Sr. Business Analyst for RSM US LLP, particularly on the myRSM (Enterprise Client Portal) team.

RSM clients engage with different portal experiences for each business unit at RSM, Senior leadership wanted to move to a singular customer experience on the 'Enterprise client portal' which is called myRSM. The key focus of the project is improving the client invoicing experience by consolidating billing and invoicing systems into a centralized portal. Completing a pilot program of Custom Web application design for 'Invoicing/Pay My Bill'.

The new portal is being integrated with PNC (Tempus Technologies) as vendors for billing/invoicing solutions. The implementation of this centralized system helps eliminate HighRadius -vendor fees and streamlines billing for Internal RSM employees and External clients. Only users with the appropriate role or permission will be able to access the new billing application.

As a BA/PO, I was responsible for partnering with Business (National Finance-Accounts Receivable and Product owner preparing work for the Product team. Worked in the Agile team, practicing all scrum ceremonies. Carried significant direct analysis activities for high priority task of the project which required high degrees of functional integration.

The product team is a cross disciplinary group responsible for delivering value through Web, Mobile and Tablet.

Key responsibilities include:

- Partnering with various teams (Finance-Accounts Receivable, Product) to prepare for the product team.

- Working with Azure DevOps for managing features, stories, user stories, and other artifacts.
- Involvement in Agile methodologies and ceremonies such as story creation, sprint planning, and backlog refinement.
- Coordinating with internal development teams and external vendors.
- Documenting work in Azure DevOps, documentation in SharePoint, and managing integrations across teams.
- Leading cross-team initiatives, collaborating with UX/UI teams, and problem-solving among multiple stakeholders.
- Working on accessibility and various business analysis tasks to ensure the project meets business needs.

Job Description:

- To utilize Azure DevOps for Epic's, Feature's, User stories, Tech stories and Spikes
- Manage user story creation, by writing requirements, acceptance criteria in stories to be used by Development team
- Create Wiki documentation in Azure DevOps
- Work with multiple dev teams and 3rd party vendors within the organization to manage multiple integrations
- Worked on Data mapping analysis for Business and Dev teams
- Worked with UI/UX teams to refine and organize user experience designs
- Worked with Accessibility/A11y team to refine and organize user experience designs
- Problem solving between multiple business and technical teams
- Support Senior management by tracking project progress, identifying risk, and communication status to the business and team
- Collaborated with internal business partners to elicit, confirm, and decompose requirements. Lead requirements gathering sessions and manage the process. Proposed scope, solutions, and/or iterations of work to the product owner. Gathered this information, analyzed, and produced documentation that the team could effectively use to develop digital capabilities.
- Transformed requirements into artifacts to be used by the development team, including process diagrams, infographics, story maps, agile stories, etc. Ensured stories are decomposed to a level of detail that can be committed to by the team.
- On scrum teams: Lead story refinement sessions with PO, Dev and QA team. Also conducted sprint planning, release planning, story sizing activities. Filled in for Product Owner and Scrum Master as needed.
- Facilitated team discussions on product architecture; ensure that technical direction is in alignment with business requirements and goals.
- Experienced with Structured Query Language (SQL), in writing medium to complex queries to extract and analyze data.
- Experienced with JSON, XML and API.
- Provided Product Owner with prioritization and solution recommendations. Taken an active role in ordering the backlog according to roadmap deliverables and work readiness.
- Assisted in the evaluation of potential operational impacts; works with up and downstream groups to improve processes.
- Strong SQL database knowledge in querying, created data mapping documentation and source to target documentation.
- Elicited requirements pertaining to site reliability and performance
- Troubleshooted development and production problems across multiple environments and operating platforms.
- Assisted product owner and business partners to identify product improvement opportunities.
- Served as a liaison to business operation areas, providing subject matter expertise, implementation support and troubleshooting.
- Participated in business analysis community of practice and embrace best practices and practice evolution.
- Performed other duties as assigned to accomplish department and organization goals and objectives.
- Created multiple reports as requested by business with help of development team
- Also, ensured BA Centre of Excellence Standards are being followed.

Ameriprise Financial**Role: Sr Business System Analyst/PO****September 2021 to March 2022**

Worked on supporting the Advice & Wealth Management Program and Field Implementation program (Advisor Desktop Proposal Tool). Acted as the liaison between the business and IT organizations to provide business critical or complex technical solutions that meet user needs and improve business performance by providing the technical analysis of business requirements (including translation into functional requirements), problem solving and troubleshooting as part of a larger project team.

- Accountable for ensuring that clear, concise requirements have been captured.
- Understanding the business processes and the interdependencies of various systems in use. - Facilitating interactive discussions with the business unit and technology teams in order to achieve alignment on defining requirements.
- Gathering, analyzing, documenting and translating business requirements into functional specifications that can be used to design and implement solutions to meet the business objectives.
- Developed and managed ongoing relationships with business and technology partners
- Participated in design sessions along with UI/UX team to define, document, and prioritize business requirements.
- Ensuring all quality standards and techniques are followed, including compiling and publishing artifacts and deliverables of the Ameriprise Project Management Methodology
- Experience with eliciting requirements, creating user stories, creating test cases, executing test scripts, implementation planning, and implementation execution.
- Accountable for planning and leading the business analysis efforts to ensure the successful delivery and implementation of project.
- Identifying and communicating risks, issues and potential solution strategies along with providing status updates to the portfolio/project manager and/or senior leadership.
- Strong SQL database knowledge in querying, created data mapping documentation and source to target documentation.
- Solid understanding of the processes and systems in use (or the ability to quickly acquire the knowledge)
- The ability to lead, influence, communicate and interact with people of all levels across the organization and external partners as required
- Ability to translate for the business or technology in order to facilitate effective collaboration
- Demonstrated proficiency with requirement and process tools (e.g., Visio, JIRA, Xray, etc.)
- Ability to handle changing priorities, manage multiple tasks and work within tight timeframes and deadlines.
- Solid analytical, quantitative and problem-solving skills, with the ability to use statistical analysis and modeling.
- Participated in working sessions and review deliverables from technical teams.
- Provided effective communication on project status, risks, and defects with Project owners and stakeholders.
- Identified business needs or opportunities for improvement through either broad industry knowledge, or detailed knowledge of specific products, services or processes.
- Proactively communicated others in a specific area of expertise through knowledge sharing and mentorship.
- In depth knowledge of business operations and processes with the ability to articulate these processes to others.
- Experienced in project methodologies and project life cycles, I understand and apply technology as it relates to the business.

Amplifon Americas**Role: Senior Business Analyst/Quality Analyst****February 2021 to August 2021**

Project was involved in building a new version website from an existing website for hearing products. Performed BA and QA responsibilities evenly. Requirements were almost through, worked on the functional requirements along with full

testing needs. Connected the dots between system integrations and data flow between different applications. As new features were added it led to new configurations.

- Function as a link between the departments and stakeholders involved in the project throughout its entire duration.
- Responsible for gathering test requirements and scoping out the test plan.
- Maintained test cases and tracked defects in Jira- Xray.
- Tested Independently and reaching out to teams for answers by being proactive.
- Ensured test case expectations were based upon requirements, and test cases traced to requirements for requirements traceability matrix (RTM).
- Conducted UAT; facilitated discussion between business team and vendor team on determining the test requirements and pass/fail criteria; documented and reported feedback to team.
- Developed UAT test plan to identify key components of the system that would require validation by business users.
- Validated the software system as well as interconnected subsystems.
- Developed strong partnerships across the organization to ensure project collaboration and success.
- Maintained trusted relationships and also communicated project status regularly with Program Manager, Business owners and stakeholders.
- Strong SQL database knowledge in querying, created data mapping documentation and source to target documentation.
- Worked with several business teams like marketing, customer care, finance, accounting, billing, revenue assurance, UXD etc., to define flow of an order.
- Created source to target data mapping document for the web application and validated data.
- Test cases validation was performed using RTM, Performed UAT validation using Excel.
- Experienced in preparing Test Plans (both high and low-level scenarios), test data, test cases/scripts, regression suites, End-to-End workflow, project presentation and training document (knowledge transfer).
- Strong knowledge in defects handling and re-testing and assigning code fixes to developers. Provided guidance to technical team for fixing accessibility/usability violations.
- Ensured test case expectations were based upon requirements, and test cases traced to requirements for requirements traceability matrix (RTM).
- Work with Outside Sales to identify and implement a CRM system that is effective at managing sales information with efficient data integration to the ERP system.
- Work with Inside Sales to identify product configuration needs and build an integrated product configurator that interfaces with the ERP.
- Identifying potential solutions for the business and providing input into any risks and issues - Creating and implementing test plans (schedule, approach, cases, scripts and conditions, etc.), including production check out and measuring testing performance results
- Excellent presence during project release with providing production support and client training.
- Worked with Outside Sales to identify and implement a CRM system that is effective at managing sales information with efficient data integration to the ERP system.
- Worked with Inside Sales to identify product configuration needs and build an integrated product configurator that interfaces with the ERP.
- Performed quality control and regression testing to ensure the new implementation had no adverse effect on existing policies, including web-based user acceptance testing
- Developed UAT test plan to identify key components of the system that would require validation by business users.
- Coordinate UAT for assigned projects. Author UAT documentation deliverables UAT Test Plan, UAT Test Results, and UAT Defect Log. Drive UAT execution and resolution of identified defects.
- Mentor business and IT resources on the BA and UAT roles and responsibilities. Coach business users in their roles and responsibilities for UAT.

Role: IT Business Analyst**April 2018 to January 2021**

Collaborated with the business and technical stakeholder to define needs and ensure understanding. Responsible for the discovery, analysis, and documentation of business requirements. Decomposed business requirements to create functional specifications for development. Collaborated with project, IT, and business management to ensure business objectives are achieved. Also, possessed strong technical acumen with the ability to translate information and research into non-technical language as necessary to effectively communicate across teams and stakeholders. Worked in variety of roles, determined based on work initiatives and IT leader directions.

- Key business analyst for numerous high-profile projects of Regulatory and Compliance, worked under the guidance of Government and Relations team to maintain compliance with DHS, CMS and other regulatory requirements, while improving organization efficiency and optimizing interactions with provider and regulators.
 - Roles and responsibilities for managing and maintaining data quality and integrity.
 - Guidelines on how data should be collected, stored, processed, and shared.
 - Ensuring data practices comply with legal requirements.
 - Implementing processes to ensure adherence to legal requirements.
 - Ensuring data is accurate, complete, consistent, and up to date
- Key business analyst for DXT team (member portal) focused on Salesforce Email Marketing and Customer Journey Mapping:
- Collaborated with marketing teams to design and implement personalized email marketing campaigns using Salesforce Marketing Cloud
- Gathered and analyzed business requirements to configure customer journeys in Journey Builder to target specific customer behaviors or events
- Developed data segmentation strategies for targeted email campaigns, improving audience targeting and increasing conversion rates
- Managed and maintained data extensions, ensuring accurate customer data for seamless marketing campaign execution across Salesforce Email Studio and Journey Builder.
- Streamlined customer journey mapping processes by identifying automation opportunities, reducing manual intervention
- Subject matter expert in regulatory and compliance areas for managed care organizations.
- Our projects focused across various business capabilities and affect multiple business processes, applications and data domains.
- Expertise in analyzing and decomposing complex business requirements, also monitored industry related standards and requirements related to technology.
- Perform gap analysis and recommend technical solutions.
- Proven excellence in the role of a subject matter expert in documenting functional requirement elicitation and prepare wireframe/flowcharts as needed.
- Assist in monitoring performance, discover variances and propose necessary actions per requirements.
- Develop and deliver progress reports, proposals, functional requirements documentation, and presentations.
- Strong IT technical analyst with database and spreadsheet development skills, was responsible for interpreting business needs into detailed software requirements
- Outstanding communicator responsible for coordinating discussions across multiple business and technical teams.
- Driven requirement/backlog grooming sessions with ETL developers to estimate the user story/epics in TFS/ADO to be taken up for the upcoming sprint.
- Hands-on experience in helping implement data exchange solutions using healthcare standards HL7 FHIR.
- Strong SQL database knowledge in querying, created data mapping documentation and source to target documentation.
- Extensive involvement with Data Warehousing, Data Analysis, and Data Mapping.
- Lead communication across various IT and business teams while coordinating analysis efforts. Own the delivery of the business requirements package by performing stakeholder analysis, document business requirements; develop business case, process map and impact analysis and create traceability of business requirements to technical requirements, test cases and User Acceptance Test (UAT) cases.
- Extensively used ETL methodology for supporting data extraction, transformations and loading processing, in a corporate-wide-ETL Solution using Informatica

- Experienced in developing and reviewing Test Plans, Test Scripts, Test Requirements, Test Cases, Test Reports, and using defect tracking tools to address bugs/issues as required by the project.
- Support Project Manager by tracking project progress, identifying risks, and communicating status to the business(es) and organizational leadership.
- Performed quality control and regression testing to ensure the new implementation had no adverse effect on existing policies, including web-based user acceptance testing
- Developed UAT test plan to identify key components of the system that would require validation by business users.
- Coordinate UAT for assigned projects. Author UAT documentation deliverables UAT Test Plan, UAT Test Results, and UAT Defect Log. Drive UAT execution and resolution of identified defects.
- Mentor business and IT resources on the BA and UAT roles and responsibilities. Coach business users in their roles and responsibilities for UAT.

Lifetime Fitness

May 2017 to February 2018

Role: Senior Business Analyst

Worked on several initiatives which helped clients customize e-mails for several campaigns across several industries and markets, examples include reporting and analysis, e-mail subscriber management, campaign automation, and template rendering. 'Time to market' was the key.

- Conducted thorough analysis of end-to-end as-is business processes for the client systems.
- Created wireframes and mockups to review portal updates with business users, PMs and IT teams.
- Mapped requirements to wireframes to maintain consistency of data.
- Worked with several business teams including marketing, customer care, finance, accounting, billing, revenue assurance, UXD etc., to define functional requirements.
- Conducted JAD sessions and interview sessions with subject matter experts/ data stewards and gathered requirements for enterprise data.
- Analyzed the base documents and business process flows of current manufacturing processes.
- Created data flows with process, data store and application associations.
- Followed the Agile/Scrum SDLC methodology working closely with the project manager in conducting daily standup meetings and sprint planning meetings and sprint retrospective.
- Driven requirement/backlog grooming sessions with developers to estimate the stories in TFS/ADO to be taken up for the upcoming sprint
- Mapped the process flows graphically using modeling software like MS Visio and IBM toolsets.
- Conducted user acceptance testing (UAT) to ensure all the business requirements were fulfilled by the application.
- Developed UAT test plan to identify key components of the system that would require validation by business users.

Merrill Corporation

01/2016 to 04/2017

Senior Business Analyst/Scrum Master

Managed the large volume of Data Site Projects which varied from simple to complex, the project was focused on the analysis of business systems, products, and processes, with detailed requirements definition and system design. Identified solutions and alternatives where appropriate. Was a liaison between multiple business units and IT on a variety of projects with the primary responsibilities to elicit, analyze, validate, specify, verify and manage project stakeholder requirements.

- Provided product demonstration for current and potential client.
- Interviewed clients and gathered requirements.
- Analyzed data gathered and developed solutions or alternative methods of proceeding.
- Reviewed forms and reports and conferred with management and users about format, distribution, and purpose, and to identify problems and improvements.
- Gathered and organized information on problems or procedures by conducting requirement gathering sessions with the stakeholder.
- Planned, coordinated, and implemented security measures to safeguard information in computer files against accidental or unauthorized damage, modification or disclosure.
- Managed changes to the project scope, project schedule, and project costs using appropriate verification techniques.

- Prepared FRD (functional requirements document), BRD (business requirements document) and SRS (system requirements specification).
- Interacted with the business and teams to gather functional and non-functional requirements and document those in the business requirements document.
- Created minutes of meetings and published to all stakeholders highlighting discussion points and pending action points.
- Created/updated user stories based on the requirements in the confluence.
- Updated mock-up screens as per requirements updates/changes.
- Applied revenue cycle management (RCM) to imply efficient healthcare delivery.
- Used features like ER diagrams, XML export, call tree, usage analysis, and value/attribute list.
- Compiled SQL queries to validate the data integration between the various database tables.
- Created use cases, activity diagrams, sequence diagrams and interaction diagrams using MS Visio.
- Supported Dev/QA team for the business queries in that sprint.
- Utilized Agile Scrum methodology and conducted daily stand-up meetings, sprint planning meetings, sprint review meeting, and sprint retrospective meetings.
- Identified and documented the UI requirements including the back-end requirements in Angular JS, JAVA script, JSON, etc.
- Conducted UAT; facilitated discussion between business team and QA team on determine the test requirements and pass/fail criteria; documented and reported user feedbacks to management team.
- Participated in sprint and poker planning with PM/Dev/QA to conclude the user story points and the effort estimates.
- Managed and facilitated team ceremonies.
- Track and report on metrics for teams to measure progress, effectiveness of agile adoption, and agile maturity of the teams
- Guide product management teams in their role, defining MVP's, story mapping, writing stories, and backlog prioritization and management
- Collaborated with product owners, program, or project managers to communicate delivery of work product from the team and escalate key risks and issues impeding scrum team effectiveness.
- Received direction from leaders and exercise independent judgment while developing the knowledge to understand function, policies, procedures, and compliance requirements.
- Created and maintained Scrum artifacts (i.e., product vision, sprint plans, product, and sprint backlogs, etc.) for employees and external technology solution providers to use in solution design and execution.

Fidelity Investments

01/2015 to 12/2015

Business Analyst

Project involved building a new framework to process, redesign and maintain the information gathering process related to management reporting.

- Provided financial leadership by continually reviewing project budgets, actual hours worked, forecasted estimates to complete and estimates at complete.
- Conducted user requirement analysis, drafting system requirements.
- Met with business for requirement reviews, prepared estimates, performed system impact analysis, designed solution, and reviewed SRs and design artifacts with architect and business.
- Worked with offshore technology team and guided them on coding standards and App development.
- Defined testing approach, conducted code reviews, prepared project artifacts for each phase end, coordinated system integration testing, and provided UAT support.
- Liaised with internal business unit team and Project Management Office for implementation of metrics and process improvements.

- Performed cost-benefit analysis, generated reports for analyzing various investments and their profitability.
- Participated in annual budget process by partnering with Finance.
- Produced periodic reports and executed ad hoc information requests.
- Developed metrics for the quarterly scorecard and reviewed with Senior Management.

The Home Depot

07/2013 to 12/2014

Business Analyst

Worked with the Inventory team and followed an Iterative approach. The project was broken into smaller phases so that we could go through the entire Software Development Cycle during every phase and try to follow an Agile approach. Responsible for estimation, planning, development, implementation, and production support for the integration of MerchLink with customers' existing systems, created and documented with UX/UI designers.

- Facilitated the requirements gathering process with the client and cross-functional leads to ensure all requirements were identified and documented to fulfill scope and business goals.
- Worked with clients to prioritize requirements, defined the level of effort, and proactively managed risk accordingly.
- Created project artifacts including business requirements, user stories, use cases, process flows and functional requirements.
- Learned PeopleSoft Queries to pull complex data from multiple tables in the HRMS system.
- Worked with the lead Project Manager/ Business Analyst to refine Business Analysis processes and tools to meet organizational and client needs - such as social networking/collaborating environments.
- Led transition activities, such as testing, writing quality assurance documentation, client training, and supporting the implementation team.
- Led and coached customers by using proven Agile software development processes and continuous delivery techniques. Created team specific Agile process flow in JIRA to move tasks from one activity to another Learned PeopleSoft Queries to pull complex data from multiple tables in the HRMS system.
- Worked with the lead Project Manager/ Business Analyst to refine Business Analysis processes and tools to meet organizational and client needs - such as social networking/collaborating environments.
- Led transition activities, such as testing, writing quality assurance documentation, client training, and supporting the implementation team.
- Led and coached customers by using proven Agile software development processes and continuous delivery techniques. Created team specific Agile process flow in JIRA to move tasks from one activity to another.
- Created use case scenarios and storyboards in MS Word and MS PowerPoint.
- Managed schedule, scope, budget, quality, requirements, account management, and roll-out activities.
- Worked with the lead Project Manager/ Business Analyst to refine business analysis processes and tools to meet organizational and client needs - such as social networking/collaborating environments.

Ecolab - St Paul, MN

01/2012 to 06/2013

Business Analyst

Global 360 is a new product to be offered by Ecolab. This project will create a new global intuitive and adaptive sales and service platform to further differentiate Ecolab's value to their customers

- Used Informatica power center, Informatics cloud Services extensively for various new ETL processes, SQL Server in order to make some database changes and Sales force as GUI.
- Interviewed Business Users to gather Requirements and analyzed the feasibility of their needs by coordinating with the project manager and technical lead and conducted extensive requirement analysis.
- Performed Data mapping, logical data modeling, data profiling, created class diagrams and ER diagrams and used SQL queries to filter data
- Developed business process models in RUP to document existing and future business processes.
- Interacted with users for verifying User Requirements, managing Change Control Process, updating existing Documentation
- Worked on Agile Scrum methodology performed roles of Scrum Master following sprint/standup sessions and used Excel extensively to write user stories, analyzed the Iteration Burn Down charts and reviewed defects.
- Designed and developed project document templates based on SDLC methodology.

- Developed business requirement specification documents as well as high-level project plan.
- Designed and developed all Use Cases and UML models using Rational.
- Coordinated various kinds of User Acceptance Testing (UAT) including regression testing, system testing, integration testing, functional testing, alpha & beta testing.
