

Diwash Paudel
diwashp7242@gmail.com
(817) 631-0217

PROFESSIONAL SUMMARY:

- Overall, 7 years of experience in Application Software Development and Design, Object Oriented, Technical Documentation, Software Testing and Debugging.
- Strong experience in Spring Framework modules such as Spring MVC, Spring IOC, AOP and Spring JDBC, Spring Data, Spring REST, Spring JTA, Spring IO, Spring Security, Spring Boot.
- Experience in understanding and using NoSQL databases MongoDB, Apache Cassandra, DynamoDB.
- Expert in latest technologies and approaches for SOA based development and good understanding of SOA life cycle, SOA design Backbone principle, Service registry and various other SOA infrastructures.
- Good experience in Database Design, writing stored procedures, functions, triggers, SQL queries.
- Worked in the front-end using AngularJS and JSP.
- Developed front end using AngularJS, jQuery, JavaScript, AJAX, HTML, CSS and JSON.
- Experience in using various Amazon Web Services (AWS) Components like EC2 for virtual servers, S3 and Glacier for storing objects.
- Experience in using Docker for installing, testing, upgrading, removing, and running software applications.
- Experience in deploying applications using Docker container services and building continuous integration and deployment pipeline using Jenkins with GitHub.
- Experience in creating build scripts using Ant and Maven, also have experience in Jenkins.
- Strong TDD (test driven development) and continuous integration experience using JUnit, Mock Framework.
- Good team player, self-motivated, quick learner, open to work with new technologies in a dynamic, fast paced and deadline driven environment.

TECHNICAL SKILLS:

Languages	Java 8, Swing, Java Beans, Java Server Faces (JSF), Hibernate
Design Patterns	MVC, Dependency Injection, Singleton, Abstract Factory, DAO.
Web Technologies	AJAX, HTML, jQuery, JDBC, JSON, HTM/5, CSS/5, Bootstrap, Angular
Frameworks	Hibernate, Spring, Struts, JPA, microservices
RDMS	MSSQL, MySQL, Oracle
Web/App Server	Tomcat, Web Sphere, JBOSS, Web logic
Other Tools	Maven, ANT, JUnit, Log4J, SVN, CVS, GIT, Splunk

PROFESSIONAL SUMMARY:

Flagstar Bank, Troy, MI
Sr. Full Stack Developer

Feb 2024 – Present

Responsibilities:

- Used agile methodology to develop the application.
- Implemented service layer using Spring IOC and annotations and Controllers using Spring MVC.
- Created Services to consume REST API's and to communicate between components using Dependency Injection provided by Angular.
- Worked with Threads, Multithreading, Synchronization and Collection API.
- Developed server-side application to interact with database using Spring Boot and JPA.
- Developed test cases and performed unit testing using Junit and Developed JUnit test cases for elements, web beans, handlers, and view helper classes.

- Implemented DAOs, entities using JPA.
- Implemented all the components following test-driven development methodology using JUnit.
- Used GIT as version control system.
- Created build and deployment scripts using Gradle.
- Created User Interface screens using HTML, AJAX, CSS, Java script.
- Developing the RESTful APIs dynamically using Java, Spring Rest Template / Spring MVC. Jackson to support XML and JSON response formats.
- Used Spring Dependency Injection, Spring MVC for REST API s and Spring Boot for micro-services.
- Created animation effects during the data load, waiting for the Ajax response using jQuery.
- Worked with CSS3 and bootstrap to create responsive web design for multiple departments/pages.
- Worked on creating REST Web services and integration on REST API'S.
- Developed test classes in JUnit for unit testing.
- Used Swagger to test the Restful API for HTTP requests such as GET, POST and PUT.
- Implemented persistence layer using Custom DAOs to handle CRUD operations.

Environment: Java, JSP, Servlets, JDBC, EJB, SOAP, AJAX, HTML, JavaScript, CSS, XML, Oracle, WebLogic, SQL, Eclipse, Maven, Spring, Hibernate, JUnit, Log4j, SVN.

Citi Bank, Dallas TX
Software Developer

Aug 2021 – Feb 2024

Responsibilities:

- Analyzed and influenced technical, system, and user requirements; identified and created solutions to improve system performance and availability.
- Created system documentation/play book and served as a technical reviewer and contributor in requirements, design, and code reviews.
- Designed, developed, and maintained Java-based applications, ensuring robust and scalable solutions.
- Utilized core Java and J2EE technologies such as Servlets, JDBC, JSP, Spring, Spring Batch, Spring Cloud, and Spring Boot to develop business logic.
- Implemented test automation frameworks using Selenium, Cucumber BDD, and Java, seamlessly integrating with CI/CD pipelines for continuous testing.
- Developed RESTful APIs and validated them using Postman while ensuring data integrity through SQL-based database validations.
- Built and optimized end-to-end automation scripts, improving regression and smoke testing efficiency for web applications.
- Leveraged Kubernetes and Docker for the CI/CD system's runtime environment for building, testing, and deploying.
- Ensured application accessibility compliance (WCAG AA 2.0) for both web and mobile platforms, proactively resolving violations.
- Conducted functional, integration, and performance testing, aligning software quality with business requirements.
- Collaborated closely with cross-functional teams, including developers, QA engineers, and DevOps, to drive software quality and resolve defects.
- Participated in Agile ceremonies and contributed to continuous testing strategies, improving development and deployment cycles.

Environment: J2EE, Java, SQL, Angular 8, IDE, Eclipse, TypeScript, jQuery, Hibernate, Spring, AWS, HTML, CSS, Bootstrap, Tomcat, CSS3, AJAX, XML, J-Unit, WSDL, Log4j, Jenkins, GIT, JSON

Kroger, Coppell, TX
Jr. Java Developer

July 2018 – Aug 2021

Responsibilities:

- Designed and developed a web site application using Spring Boot, Hibernate, MVC framework and RESTful APIs.

- Developed applications in the Spring framework, making use of features such as Spring Dependency Injection (Spring IO), Spring JDBC, Spring Security, and Spring Boot.
- Worked on AOP (Spring) for logging the details in the database. This is used for Application-level logging and data can be used for analysis in later stages.
- Design and implementation of business logic and data processing routes.
- Used Singleton, Spring MVC, Hibernate, Factory Pattern and DAO design patterns.
- Developed common XML schema's (XSD) as client contracts used to publish Top-Down approach-based Web Services
- Developed REST-Web services in a Service Oriented Architecture (SOA) consisting of the integration tier with Web services external to organization, middle tier with Spring Application Framework.
- Designed and implemented Hibernate Annotation-based persistence layer for backend.
- Used Criteria, HQL and SQL as the query languages in Hibernate Mapping. Integrated the Spring and Hibernate framework.
- Contributed to the DevOps team responsible for designing build processes and automation, deployment automation, release orchestration and management, refreshing the current CI/CD pipeline, and its infrastructure.
- Implemented processes using client-side scripting languages such as JavaScript, as well as server-side scripting languages like MySQL, AJAX, and JUnit.
- Managed and updated team repository in S3 bucket of AWS.
- Designed tables in Oracle database and worked with Database Developers for implementing Stored Procedures in the application.
- Worked on configuration and usage of Apache Log4J for logging and debugging purposes.
- Used ANT automated build scripts to compile and package the application and implemented Log4j for the project.
- Worked on bug fixing and enhancements on change requests.

Environment: Java, J2EE, Spring, JDBC, JNDI, Hibernate, Eclipse, Oracle, XML/XSLT, HTML, JavaScript, Angular, WebLogic, JUnit.

EDUCATION DETAILS:

Master's in Information Technology, University of Cumberland's.
