

Qualifications Summary

Mechanically-inclined professional noted for coordinating complex R&D projects, delivering measurable improvements in production efficiency, reducing warranty claims, and decreasing operational costs across aviation and marine manufacturing settings.

Results-driven UAS Project Manager with a track record of managing remote R&D operations, developing bills of materials, and implementing budgeting processes to ensure timely project delivery. Skilled in composite materials application, vacuum bagging techniques, and gel coating procedures developed through extensive experience with both aircraft and marine vessels. Ability to lead cross-functional teams, streamline production workflows, and reduce warranty claims through astute quality control systems. Dedicated to leveraging a strong background in product development, engineering, and customer relations to deliver innovative solutions that meet client specifications.

Areas of Expertise

• UAS Project Management • Bill of Materials Development • Composite Materials Manufacturing • Lamination & Vacuum Bagging Techniques	• Customer Relationship Management • Product Development & Engineering • Team Leadership & Development • Aircraft Repair & Maintenance	• Gel Coating Applications • Materials Procurement • Budget & Cost Control • Time Management

Professional Experience

Project Manager | Thunderstrike Aviation UAS – Remote

2021 – Present

Function as the Project Manager at the company, focusing on unmanned aerial systems within a research and development facility. Coordinate project milestones and deliverables effectively across the R&D spectrum in a remote setting. Draft bills of materials, execute budgeting tasks, oversee procurement, and manage supply chain functions to support ongoing projects and innovations.

- Guaranteed all fixed-wing components’ (including winglets and firewalls) compliance with specified requirements.
- Executed quality control inspections to ensure smooth assembly with no gaps or rough edges and uniform leading-edge line finishes.
- Implemented safety protocols by isolating all bays and enforcing rigorous inspection procedures to uphold top-notch aircraft safety.
- Coordinated efforts between multiple teams and stakeholders to confirm the construction methods and material strength.
- Drove notable enhancement in aircraft components design by incorporating solid firewalls from engine to cargo bay and specialized pull/wire routes for navigation lights in winglets.

Night Supervisor | EdgeWater Power Boats – United States

2017 – 2021

Enhanced operational efficiency and output by meeting prescribed production schedules consistently. Significantly improved product quality and customer satisfaction through development and implementation of strategies to reduce rework and warranty claims.

- Boosted productivity by streamlining processes and introducing techniques such as lamination, vacuum bagging, and gel coating.
- Slashed overtime expenses by optimizing team workflows and enhancing overall productivity during night shifts.
- Achieved budget reductions through cost-effective management and efficient resource utilization.

Self-Employed | Aircraft Services, KDED

2015 – 2017

Provided robust maintenance and repair services to ensure aircraft safety and reliability, including performing scheduled maintenance, emergency repairs, and system diagnostics. Managed all aspects of client interactions, from initial contact and service inquiry to post-service follow-up. Stayed updated with the latest aviation maintenance techniques and regulations by attending relevant workshops.

- Managed a wide array of service offerings, including aircraft sales, repairs, and parts sales, catering to a diverse clientele.
- Fostered strong customer relationships, ensuring high satisfaction and repeat business in the competitive aviation market.
- Expedited operations to optimize efficiency and profitability in the delivery of aircraft services and parts.

Team Lead | Sea Ray Boats – Palm Coast, FL

1996 – 2014

Began career on the production floor after transferring from Whaler, initially working in Small Parts Lamination. Progressed through key roles, exhibiting a strong ability to understand and manage production schedules, lead teams, order supplies, and adhere to budget constraints.

- Contributed to innovation in boat design and manufacturing processes after transitioning into product development and engineering.
- Achieved an exemplary safety record, with a reduction in workplace accidents due to rigorous enforcement of safety protocols.
- Gained extensive experience in gel coating, becoming proficient in high-quality finishing techniques.
