Professional Summary

- Over 10 years of professional experience as a Business System Analyst / Business Analyst with expertise on creating Business Requirements Documents (BRDs), Functional Specifications (FSDs), System Design Specifications (SDSs), Requirements Traceability Matrices (RTMs), User Acceptance Testing (UAT) documents, process maps, use cases, and call flow diagrams. Proficient in both Waterfall and Agile methodologies, as well as SQL queries to support data-driven decision-making and effective reporting. Experienced in analyzing complex data to uncover actionable insights and communicating findings clearly to stakeholders. Strong focus on business process optimization, resource management, and driving strategic initiatives to enhance operational efficiency and support business growth across the healthcare, banking, retail, and e-commerce sectors.
- Hands-on knowledge of SQLs, proficient in SQL Server, SQL CE, T-SQL, and related database functions including triggers, tables, user functions, views, indexes, and data integrity and familiarity with Actimize table structures, aiding in investigation and reporting tasks.
- Experience in defining business requirements using agile techniques with a strong focus on customer experience, writing functional and technical specifications, creating test plans and cases, exposure to automation testing, and experience with project management.
- Experience using Agile methodologies and tools (Jira, Confluence, Kanban, VersionOne/Agility) for requirements elicitation, system testing, data analysis (including SQL queries), quality assurance, and technical documentation.
- Expertise in creating detailed process models, flowcharts, wireframes, and storyboards to communicate complex business processes and system requirements to both technical and non-technical stakeholders, providers.
- Hands-on experience collaborating with cross-functional teams to translate requirements into actionable design artifacts for system development and deployment.
- Led and facilitate requirement-gathering workshops, user interviews, and stakeholder discussions, developing wireframes, mockups and prototypes in Figma or comparable design software, ensuring clear communication and integration of all relevant perspectives and feedback.
- Extensive experience creating and maintaining various documents including Software Requirement Specifications (SRS), Business Requirements Document (BRD), Functional Specifications (FSD), Systems Design Specification (SDS), Requirement Traceability Matrix (RTM), and testing documents.
- Provide technical expertise in evaluating, designing, and developing systems, processes, and procedures to meet complex business requirements, including creating technical documentation (flow, state, and sequence diagrams).
- Collaborate with stakeholders, cross-functional teams, and external vendors to gather, analyze, and translate business needs into actionable solutions, user stories, and system designs.
- Lead gap analysis and process improvement initiatives, serve as the Subject Matter Expert on applications, and act as the primary point of contact for troubleshooting and vendor coordination Act as a liaison between teams (UI/UX, app development, backend, CMS, testing) to ensure effective communication of business requirements and smooth development processes.
- Extensive knowledge in conducting user acceptance testing (UAT), system administration, and data process modeling, as well as mentoring QA teams and managing content management templates and workflows using SharePoint and coordinating UAT efforts by engaging business users, providing clear instructions, and ensuring proper validation before product release.
- Proficient in SQL Server, SQL CE, T-SQL, and related database functions including triggers, tables, user functions, views, indexes, and data integrity,
- Hands-on experience with tools such as TSO/ISPF, PDS & Application Datasets, File Aid, JIRA, Tableau, PowerBI, Confluence, and Microsoft Office (Excel, Visio, Teams, Project, SharePoint).
- Experience in designing and configuring benefits plans in the healthcare industry, ensuring compliance with payer requirements and regulatory standards with experienced in order management, inventory, shipping execution, and advanced pricing for distribution and retail industries.
- Expertise in SDLC methodologies such as Agile, RUP, and Waterfall, and in managing POS systems, troubleshooting, and maintaining systems in retail environments using Microsoft Azure DevOps.

- Experience managing feedback loops and ensuring products meet business expectations before deployment while working with testing teams to validate system functionality.
- Led initiatives for Electronic Data Interchange (EDI) transactions related to eligibility, billing, and enrollment functions, ensuring smooth data exchanges between internal systems and external partners.
- Excellent communication skills, with experience in leading business and technical meetings, working with remote teams, and collaborating in both waterfall and agile environments.
- Proficient in integrating and troubleshooting retail hardware peripherals such as printers, barcode scanners, and card readers within POS systems.
- Strong analytical and problem-solving skills, applying these abilities to diagnose complex issues and provide timely solutions, transitioning into a Business Analyst role to identify system requirements and propose effective solutions.
- Expertise in ETL processes for data warehousing and business intelligence tools such as Power BI and Business Objects (Reporter, Supervisor, Designer, and Web Intelligence).
- In-depth knowledge of Sterling OMS for system contract definitions and table modeling.
- Experience in eCommerce portal development and working within B2B and B2C environments.
- Perform root cause analysis with the testing team to identify and resolve project issues in the Track Tool.

PROFESSIONAL EXPERIENCE

Client: UnitedHealth Group, PA

Jun 2024 - Present

Business System Analyst

Responsibilities:

- Conducted Joint Application Development (JAD) sessions to allow different stakeholders to communicate with each other, resolve problems at an early stage.
- Expertise in analyze and optimize Electronic Health Records (EHR) systems to enhance data management, improve patient care, and ensure seamless integration with other healthcare platforms.
- Experience on works with stakeholders to design and configure benefits plans, ensuring proper alignment with payer requirements, regulatory compliance, and efficient claim adjudication in healthcare industry and excellent experience using various SDLC methodologies such as: Agile, Rational Unified Process (RUP), and Waterfall Methodologies.
- Experience on evaluate and improve eligibility verification processes and claims workflows, ensuring timely, accurate processing, and maximizing reimbursements for healthcare payers.
- Experience in managing the complete software development life cycle, including gathering requirements and writing functional/technical specifications for complex projects.
- Experience in leverage healthcare analytics to generate actionable insights on claim trends, reimbursement performance, and operational efficiencies to support strategic business decisions.
- Updated reports, queries, stored procedures using Visual Studio, SQL Server, and SQL Server Reporting Services.
- Interacted with Business Owners, Users, and Stakeholders to identify Business System Needs, evaluated solutions for business problems, and prepared Business Requirements Document (BRD) and later translated them into Functional Requirements Document (FRD) and RFP software solution.
- Represented the business requirements in various alternative views such as analysis models, process flow diagrams and user stories.
- Gathering and documenting business cases, business rules and data mapping documents, workflows, wireframes, and mock-ups for trading strategies, enhancements to trading systems platform, and high-level requirements gathering for product development research.
- Provide best practice recommendations in the areas of Order Management System and CRM.
- Conducted Gap Analysis to define the impact of the new requirements on the existing GUI and further prepared Business Impact Analysis Reports. Working with offshore development and maintenance teams in terms of defining tasks and providing daily updates and reports and Statement of Work (SOW) and project execution plan for the entire development and testing phase which included multiple iterations.
- Collaborating with in-house and off-site teams, and vendors to successfully develop and manage user stories, sprints, design, development, and testing.
- Developed training programs on e-procurement processes, permitting users to create e-procurement catalogs. Allowed for data capture on areas corporate procurement could leverage volume discounts in the future.
- Expertise the testing of B2B and B2C websites, including creating test plans and test cases, executing test cases (including regression and ad-hoc testing), and defect management.
- Worked on Used prototypes for users to explain the intended systems Interface design and sign off documents.

- Involved in implementation of data governance, master data management, ETL (Extract, Transform, Load) procedures to transform data for final loading into production environment
- Maintain and update ETL packages to align with evolving requirements, best practices, and technologies.
- Identifies underperforming areas in the supply chain and may suggest improvements or resolutions to problems.
- Created daily audit reports, processed daily up-feed from PDS to OMNI system, and created daily general ledger report.
- Used Agile, Scrum requirements management tool Rally for managing story cards, efforts, and preparing burn-down charts and velocity charts.
- API testing validates the JSON output with the expected output and compares the JSON output with XML input.
- Designed Use Case Diagrams, Activity Diagrams, and Data Flow Diagrams to define the Business Process.
- Analyzed the Data Entity Relationships and worked on Functional Requirements Document (FRD).
- Tracing requirements throughout the development process and verifying adherence using the Requirements Traceability Matrix (RTM).
- Responsible for conducting JAD Sessions with different IT Group department managers & refined the requirements.
- Determine and create the best UI/UX design concepts for the product.
- Responsible for Interacting with the Developers to explain the proposed changes and ensure understanding of the system requirements to handle these changes with excellent communication and listening skills with an ability to transform customer requirements into deliverable actions.

US Bank, CA

Oct 2022 - May 2024

Sr. Business Analyst

Responsibilities:

- Used SQL queries (select, insert, update, delete, sub-queries, joins, etc.) to manipulate the data in the database and generate reports to help the business users for their daily activities.
- Involved in developing various Reports and Report folders to assist managers to better utilize salesforce as a sales tool and various Reports for different user profiles based on the needs of the organization.
- Involved in analyzing the Scope of the Requirements, and managed requirements to avoid Scope Creep, hands-on FIS Systematics experience in the indicated applications for the positions.
- Hands on experience on order management, inventory, shipping execution, and advance pricing for distribution and in retail industry and experience with Systematics modules like IMPACS (loans), ST (savings & time deposits), or AM (account management).
- Experience in managing the complete software development life cycle, including gathering requirements and strong understanding of core banking operations, including loans, deposits, payments, and customer information.
- Experience in working with business stakeholders to understand and document business needs and functional requirements related to Systematics modules (e.g., loans, deposits, customer information, etc.)
- Involved in GAP Analysis and enhanced business process by integration in the Retail Domain.
- Experienced on Requirement Gathering Sessions to be able to ensure the system requirements and solutions handle data integrity restrictions within the application, minimize the amount of customization while adhering to regulations but still capturing the business needs.
- Participated in the development of Custom tabs, Validation rules, and Auto-Response Rules for automating business logic in various phases of the Retail Domain.
- Developed the systems implementation project management plan with milestones and steps from procurement of vendors to project implementation and maintenance.
- Participated in creation of workflow rules and defined related tasks, email alerts, and field updates.
- Strong Knowledge in AppExchange Applications for integrating with third party applications.
- Participated in the development of custom Dashboards for the manager's home page and gave accessibility to dashboards for authorized people. Designed and developed project document templates based on Agile/Scrum methodology.
- Involved in development of pick lists, dependent picklists, lookups, master detail relationships, validation, and formula fields. wrote RFP and evaluated proposals.
- Participated in many development decisions related to the Retail workflow process from manufacturing to the distribution, handling of returns etc.
- Worked on Requirements Elicitation by conducting interviews, surveys, workshops and created BRD and FRD
- Worked on Business Requirements Documents (BRD), Functional Requirement Specification (FRS), User Requirement Specification (URS) and Change Request (CR) document.
- Involved in gathering requirements using Artefacts Digging, interviewing, Focused Group and Job Shadowing to prepare a comprehensive set of BRD, FRD & SRS.

- Worked on researching, designing & prototyping the UX and UI by doing User interviews, Sketch, Photoshop & Invasion mock-ups.
- Integrating new chains into existing systems which encompassed, gap analysis, specific brand requirements and full POS integration.
- Provided Validation Rules to maintain data quantity and data consistency.
- Involved in developing Workflows and workflow actions to send emails, update fields and assign tasks.
- Involved in developing Approval processes and Approval steps to email alerts and field updates.
- Worked with QA team to create and implement test plan and test cases for User Acceptance Testing (UAT). Involved with the whole UAT to ensure the performance of the system and application.

Datazo Info Tech, Dhaka, Bangladesh

Jan 2019 - May 2022

Sr. Business Analyst

Responsibilities:

- Work as Business Analyst for the project to build a MS SQL data warehouse for complex wide profitability reporting. Work under direct supervision to perform Supply Chain activities for assigned product portfolio to optimize inventory, minimize cost, and set and achieve customer service goals.
- Interviewed Business Users to gather Requirements and analyzed the feasibility of their needs by coordinating with the project manager and technical lead.
- Coordinates oversight of proper cash handling and financial transactions, including contract and purchase order management, accounts payable, accounts receivable, payroll, grants, revenue recording/uploading.
- Utilized JIRA as Agile Project Management Tool to organize sprints and manage product backlog.
- Responsible for providing analytical support to Sales Support/marketing and internal sales group clients of WMS.
- Performed extensive Requirement Analysis including data analysis and gap analysis.
- Business data modeling and analysis and a thorough understanding of relational data structures, database star and snowflake schemas and OLAP concepts.
- Conversion of existing website to ATG software client moved from custom built application to ATGs eCommerce suite.
- Acquisition Operations will be responsible for analyzing many areas of the business, including but not limited to receipts routing, planning, receiving, buying, shipping, inventory management, grading, item number creation and purchase order management.
- Backend testing team performs the API testing of REST Web services using tools like Soap-UI and Poster.
- Worked with Data Warehouse in the development and execution of data conversion, data cleaning and standardization strategies and plans as several small tables are combined into one single data repository system MDM (Master Data Management).
- Automated Shell scripts to pull and load data from operational resources into the Data Staging Area and Data Warehouse for business intelligence reporting tools like Power BI. Analyzed user stories to develop acceptance test criteria in collaboration with product owners. Query the database using SQL Advantage for testing and verification purposes.
- Manage and drive the standardization of procurement processes and operations and ensure compliance to the procurement policy and procedures.
- Manage, review and analyze all procurement systems related user queries.
- Documented Business Process Requirements with Use Cases and facilitated JAD sessions to define AS IS and TO BE IT processes for the TIERS project, a conversion from Unisys COBOL to client/server.
- Prepared Business Requirement Documents (BRD's) after the collection of Functional Requirements from System Users that provided appropriate scope of work for technical team to develop prototype and overall system.

Vivasoft Limited, Dhaka, Bangladesh

Nov 2015 - Dec 2018

Business Analyst

Responsibilities:

- Extensively involved in gathering business requirements and system requirements and specifications.
- Designing Technical Specification Documents as per Business Specification. Performed gap analysis between existing and feature modules.
- Analyze the current POS system and perform research on the evolutionary roadmap. Understand the different technologies supporting the in-house POS.
- Conduct testing on modified specifications about POS check verification and PIN Pad requirements with signature capture.

- Analyzed, Documented, and managed all Project Requirements with RUP Methodologies. Involved the creation of Use Case Diagrams, Object Model Diagrams, Activity Diagrams, Class Diagrams, Sequence Diagrams and Data Model Diagrams.
- Created and authored Use Case Diagrams and Activity Diagrams using MS Visio. Used documentation tools such as MS Office, MS Visio and MS Excel to document and deliver Business Requirement documents to the state for approval.
- Interact with the team to review and develop data standards, data exchange, XML data standard or data sharing model.
- Identify, review and resolve gaps or risks in procurement processes.
- Provide user technical assistance on the procurement systems.
- Gathered business Requirements, analyzed data. Created workflow diagrams and identified scope creep. Progressed from problem statement to well-documented Designs for state approval and for production, and implementation.
- Created As-Is Business Process Models using MS Visio. Conducted Joint Application Development (JAD) sessions with SMEs to identify business rules, functional and non-functional requirements.
- Worked with the business end users, project and technology managers, and operations group to identify, define, and clarify business and user requirements and processes.
- Responsible for interacting with clients for gathering and analyzing requirements, creating detailed specifications and project planning. Assisted Product Owner in Agile -Scrum based project development and mentored Business Analysts.
- Conducted BRD walkthroughs and obtained sign off from stakeholders. Partner with clients, peers, technical groups to perform quality reviews on business requirements to determine if the requirements fulfill the demand of the end users. Utilized Project Management tools like - Jira, SharePoint, IBM Rational ClearQuest, Oracle SQL developer, MS Visio.
- Responsible for implementation and creation of Change Control Requests. Collaborated with the QA team in reviewing and validating test plans and test cases, ensuring that the final application catered to the user requirements.
- Involved in conducting Functionality testing, Integration testing, Regression testing and User Acceptance testing (UAT). Provided analysis and insight to the QA Team in defects and bugs tracking.
